EAST SITCUM TERMINAL STORMWATER IMPROVEMENTS & NORTH INTERMODAL YARD STORMWATER TREATMENT

PROJECT NO. 201054.01 & 201055.01 | CONTRACT NO. 070819

Scope of Work: The work required for this project includes: Replacement of approximately 1200 LF of existing corrugated metal stormwater pipe at East Sitcum and the installation of a stormwater treatment vault and related piping and structures at the North Intermodal Yard.

Bid Estimate: Estimated cost range is $1,100,000 to $1,300,000, plus Washington State Sales Tax (WSST).

Sealed Bid Date/Time/ Location: Bids will be received at the Front Reception Desk, Port Administration Office, One Sitcum Plaza, Tacoma, Washington until 10:00 A.M. on September 5, 2018, at which time they will be publicly opened and read aloud.

Bidding Security: Each bid must be accompanied by a Certified Check or Bid Security Bond in an amount equal to five (5) percent of the bid.

Contact Information: All questions are to be put into writing to the Port at procurement@portoftacoma.com. No oral answers will be binding by the Port.

Bidding Documents: Plans, Specifications, Addenda, and Plan Holders List for this project are available on-line through The Port of Tacoma’s Website www.portoftacoma.com. Click on "Contracts"; "Procurement", and then the Procurement Number 070819. Bidders must subscribe to the Holder’s List on the right hand side of the screen in order to receive automatic email notification of future addenda and to be placed on the Holder’s List.

Contact procurement@portoftacoma.com with questions. Holder’s Lists will be updated regularly. Additional Instructions available in 00 21 00 - Instructions to Bidders.

END OF SECTION
PART 1 - SUMMARY

1.01 DEFINITIONS

All definitions set forth in the Agreement, the General Conditions of the Contract for Construction, and in other Contract Documents are applicable to the Bidding Documents.

A. "Addenda" are written or graphic instruments issued prior to the execution of the Contract which modify or interpret the Bidding Documents by additions, deletions, clarifications, or corrections. The contents of an Addendum are issued in no particular order and therefore should be carefully and completely reviewed.

B. "Award" means the formal decision by the Port of Tacoma ("Port") notifying a Responsible Bidder with the lowest responsive Bid of the Port's acceptance of the Bid and intent to enter into a Contract with the Bidder.

C. The “Award Requirements” include the statutory requirements as a condition precedent to Award.

D. The “Base Bid” is the sum stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents as the base to which work may be added or from which work may be deleted for sums stated in Alternate Bids.

E. A “Bid” is a complete and properly signed proposal to do the Work, submitted in accordance with the Bidding Documents, for the sums therein stipulated and supported by any data called for by the Bidding Documents.

F. The “Bid Date” is the day and hour specified in the Bidding Documents, as may be changed through an Addendum, by which Bidders are required to submit Bids to the Port.

G. The “Bid Form” is the form(s) included with the Bidding Documents, with Specification Section 00 41 00, through which a Bidder submits a Bid.

H. A “Bidder” is a person or entity who submits a Bid.

I. The “Bidding Documents” include the Advertisement or Invitation to Bid, Instructions to Bidders, the Bid Form, any other sample bidding and contract forms, the Bid Bond, and the proposed Contract Documents, including any Addenda issued prior to the Bid Date.

J. The “Contract Documents” proposed for the Work consist of the Agreement, the General Conditions of the Contract (as well as any Supplemental, Special or other Conditions included in the project manual), the Drawings, the Specifications, and all Addenda issued prior to, and all modifications issued after, execution of the Contract.

K. The “Schedule of Unit Prices” is a separate schedule on the Bid Form for Unit Pricing as an all-inclusive price per unit of measurement for materials, equipment, or services as described in the Bidding Documents or in the proposed Contract Documents for the optional use of the Port. Quantities are not predictions of amounts anticipated. The Port may, but is not obligated to, accept a Schedule of Unit Price if it accepts the Base Bid. The Schedule of Unit Prices are not factored into the evaluation of determining the low bid amount and are not included as part of the bid award amount.

L. A “Sub-Bidder” is a person or entity of any tier who submits a bid or proposal to or through the Bidder for materials, equipment or labor for a portion of the Work.

1.02 BIDDER’S REPRESENTATIONS

By making its Bid, each Bidder represents that:
A. BIDDING DOCUMENTS. The Bidder has read and understands the Bidding Documents, and its Bid is made in accordance with them.

B. PRE-BID MEETING. The Bidder has attended pre-Bid meeting(s) required by the Bidding Documents. Attendance at a mandatory meeting or training session means that, in the sole opinion of the Port, a Project representative of a prospective Bidder has attended all or substantially all of such meeting or session.

C. BASIS. Its Bid is based upon the materials, systems, services, and equipment required by the Bidding Documents, and is made without exception.

D. EXAMINATION. The Bidder has carefully examined and understands the Bidding Documents, the Contract Documents (including, but not limited to, any liquidated damages and insurance provisions), and the Project site, including any existing buildings. It has familiarized itself with the local conditions under which the Work is to be performed, has correlated its observations with the requirements of the proposed Contract Documents, and it has satisfied itself as to the nature, location, character, quality, and quantity of the Work, the labor, materials, equipment, goods, supplies, work, services, and other items to be furnished, and all other requirements of the Contract Documents. The Bidder has also satisfied itself as to the conditions and other matters that may be encountered at the Project site or affect performance of the Work or the cost or difficulty thereof, including but not limited to, those conditions and matters affecting transportation; access; disposal; handling and storage of materials; equipment and other items; availability and quality of labor; water; electric power and utilities; availability and condition of roads; climatic conditions and seasons; physical conditions at the Project site and the surrounding locality; topography and ground surface conditions; and equipment and facilities needed preliminary to, and at all times during, the performance of the Work. The failure of the Bidder fully to acquaint itself with any applicable condition or matter shall not in any way relieve the Bidder from the responsibility for performing the Work in accordance with, and for the Contract Sum and within the Contract Time provided for in, the Contract Documents.

E. PROJECT MANUAL. The Bidder has checked its copies of the project manual (if any) with the table of contents bound therein to ensure the project manual is complete.

F. SEPARATE WORK. The Bidder has examined and coordinated all Drawings, Contract Documents, and Specifications with any other contracts to be awarded separately from, but in connection with, the Work being Bid upon, so that the Bidder is fully informed as to conditions affecting the Work under the Contract being Bid upon.

G. LICENSE REQUIREMENTS. Bidders and Sub-Bidders shall be registered and shall hold such licenses as may be required by the laws of Washington, including a certificate of registration in compliance with RCW 18.27, for the performance of the Work specified in the Contract Documents.

H. NO EXCEPTIONS. Bids must be based upon the materials, systems, and equipment described and required by the Bidding Documents, without exception.

1.03 BIDDING DOCUMENTS

A. COPIES

1. Bidders may obtain complete sets of the Bidding Documents from The Port of Tacoma’s Website www.portoftacoma.com. Click on “Contracts” then “Procurement”.

2. Complete Sets. Bidders shall use complete sets of Bidding Documents in preparing Bids and are solely responsible for obtaining updated information. The Port does not assume
any responsibility for errors or misinterpretations resulting from the use of incomplete and/or superseded sets of Bidding Documents.

3. Conditions. The Port makes copies of the Bidding Documents available only for the purpose of obtaining Bids on the Work and does not confer a license or grant permission for any other use.

4. Legible Documents. To the extent any Drawings, Specifications, or other Bidding Documents are not legible, it is the Bidder’s responsibility to obtain legible documents.

B. INTERPRETATION OR CORRECTION OF BIDDING DOCUMENTS

1. Format. The Contract Documents are divided into parts, divisions, and sections for convenient organization and reference. Generally, there has been no attempt to divide the Specification sections into Work performed by the various building trades, any Work by separate contractors, or any Work required for separate facilities in, or phases of, the Project.

2. Duty to Notify. Bidders shall promptly notify the Port in writing of any ambiguity, inconsistency, or error that they may discover upon examination of the Bidding Documents or of the site and local conditions.

3. Products and Installation. All Bidders shall thoroughly familiarize themselves with specified products and installation procedures and submit to the Port any objections (in writing) no later than seven (7) days prior to the Bid Date. The submittal of the Bid constitutes acceptance of products and procedures specified as sufficient, adequate, and satisfactory for completion of the Contract.

4. Written Request. Bidders requiring clarification or interpretation of the Bidding Documents shall make a written email request to procurement@portoftacoma.com at least seven (7) days prior to the Bid Date.

5. Request to Modify Responsibility Criteria. No later than seven (7) days prior to the Bid Date, a potential Bidder may request in writing that the Port modify the Responsibility Criteria. The Port will evaluate the information submitted by the potential Bidder and respond before the Bid Date. If the evaluation results in a change of the Criteria, the Port will issue an Addendum identifying the new Criteria.

6. Addenda. The Bidder shall not rely on oral information provided at any pre-Bid meetings or during site visits. Verbal statements made by representatives of the Port are for informational purposes only. Any interpretation, correction, or change of the Bidding Documents will be made solely by written Addendum. Interpretations, corrections, or changes of the Bidding Documents made in any manner other than by written Addendum, including but not limited to, oral statements, will not be binding, and Bidders shall not rely upon such statements, interpretations, corrections, or changes. The Port is not responsible for explanations or interpretations of the Bidding Documents other than in a written Addendum.

7. Site Visits. Any site visits are provided as a courtesy to potential Bidders to assist them in becoming familiar with the Project site conditions. However, only the Bidding Documents, including any issued Addenda, may be relied upon by Bidders.

8. Singular References. Reference in the singular to an article, device, or piece of equipment shall include as many of such articles, devices, or pieces as are indicated in the Contract Documents or as are required to complete the installation.
9. Utilities and Runs. The Bidder should assume that the exact locations of any underground or hidden utilities, underground fuel tanks, and plumbing and electrical runs may be somewhat different from any location indicated in the surveys or Contract Documents.

C. SUBSTITUTIONS
1. For substitutions during bidding, refer to Section 00 26 00 – Substitution Procedures During Bidding.

D. ADDENDA
1. Distribution. All Addenda will be written and will be made available on the Port's website or any other source specified by the Port for the Project.
2. Copies. Copies of Addenda will be made available for inspection wherever Bidding Documents are on file for that purpose.
3. Verification and Acknowledgment of Receipt. Prior to submitting a Bid, each Bidder shall ascertain that it has received all Addenda issued. Each Bidder shall acknowledge its receipt and consideration of all Addenda in its Bid.

1.04 BIDDING PROCEDURE
A. FORM AND STYLE OF BIDS
1. Form. Bids (including required attachments) shall be submitted on forms identical to the Bid Form included with the Bidding Documents. No oral, email, or telephonic responses or modifications will be considered.
2. Entries on the Bid Form. All blanks on the Bid Form shall be filled in by typewriter, printer, or manually in ink.
3. Figures. All sums shall be expressed in figures, not words. Portions of the Bid Form may require the addition or multiplication of components bids to a total or the identification of component amounts within a total. In case of discrepancy between unit prices listed and their sum(s), the unit prices listed shall govern (rather than the sum).
4. Initial Changes. Any interlineation, alteration, or erasure shall be initialed by an authorized representative of the Bidder.
5. Bid Breakdown. The Bid Form may contain, for the Port’s accounting purposes only, a breakdown of some or all of the components included in the Base Bid.
   a. For lump sum bids, the total Contract Sum shall be submitted.
   b. For unit price bids, a price shall be submitted for each item of the Work, an extension thereof, and, if requested, the total Contract Sum.
6. Schedule of Unit Prices. All Unit Prices under this schedule shall be bid. The Port reserves the right, but is not obligated to, reject any Bid on which all requested Schedule of Unit Prices are not bid.
7. No Conditions. The Bidder shall make no conditions or stipulations on the Bid Form nor qualify its Bid in any manner.
8. Identity of Bidder. The Bidder shall include in the specified location on the Bid Form, the legal name of the Bidder and, if requested, a description of the Bidder as a sole proprietor, a partnership, a joint venture, a corporation, or another described form of legal entity. The Bid shall be signed by the person or persons legally authorized to bind the Bidder to a
contract. The Port verifies signature authority on the Labor and Industries website https://fortress.wa.gov/lni/bbip/Search.aspx under the contractor registration business owner information. If the business owner information is not current, the bidder shall show proof of authority to sign at the request of the Port. A Bid submitted by an agent shall have a current power of attorney attached certifying the agent’s authority to bind the Bidder

9. Bid Amounts Do Not Include Sales Tax. The Work to be performed constitutes a “retail sale” as this term is defined in RCW 82.04.050. Thus, the Base Bid amount shall include in the sum stated all taxes imposed by law, EXCEPT WASHINGTON STATE AND LOCAL SALES TAX. The engaged Contractor will pay retail sales tax on all consumables used during the performance of the Work and on all items that are not incorporated into the final Work; this tax shall be included in the Base Bid price and in any other prices set forth on the Bid Form. The Port will pay state and local retail sales tax on each progress payment and final payment to the engaged Contractor for transmittal by the Contractor to the Washington State Department of Revenue or to the applicable local government.

B. POTENTIAL LISTING OF SUB-BIDDERS (SUBCONTRACTORS)

1. Procedure. On projects equal to or greater than $1,000,000, the Bid Form includes a requirement that certain Sub-Bidders be listed, in which case the Bidder must complete the required list. In these circumstances, and regardless of the anticipated cost of the Project, the Bidder must name the Sub-Bidder or Sub-Bidders with whom the Bidder, if Awarded the Contract, will subcontract directly (i.e., not lower-tier Sub-Bidders) for performance of the Work of:
   a. HVAC (heating, ventilation and air conditioning) Work,
   b. plumbing Work as described in RCW 18.106,
   c. electrical Work as described in RCW 19.28, and
   d. any other categories of Work listed on the Sub-Bidder listing form and/or Bid Form.

2. Self-Performance: If the Bidder intends to self-perform any of these categories of Work, it must name itself for each such category of Work.

3. Multiple Entries: The Bidder shall not list more than one (1) entity for a particular category of Work identified, unless a Sub-Bidder will vary based on an Alternate Bid, in which case the Bidder shall identify the Sub-Bidder to be used for the Alternate and the affected portion of the Work.

4. Failure to Submit: In accordance with RCW 39.30.060, failure of a Bidder to submit as part of the Bid the names of such proposed HVAC, plumbing, and electrical Sub-Bidders or to name itself to perform such Work or the naming of two or more Sub-Bidders to perform the same Work shall render the Bidder’s Bid non-responsive and, therefore, void.

5. Requirement to Subcontract: The Bidder, if Awarded the Contract, will subcontract with the listed Sub-Bidders for performance of the portion of the Work designated on the Bid Form, subject to the provisions of the Contract for Construction and RCW 39.30.060. The Bidder shall not substitute a listed Sub-Bidder in furtherance of bid shopping or bid peddling.

6. Sub-Bidder Qualification: Listed Sub-Bidders may be required to provide evidence of their qualifications, including a statement of experience and references, prior to Award, or at any time during the Contract Time. Such information shall be provided within 24 hours of request. This evidence shall demonstrate that the Sub-Bidder meets or exceeds all requirements for experience, qualifications, manufacturer’s certifications, or any other
7. Replacement: If a listed Sub-Bidder fails to provide adequate evidence of qualifications, is unable to comply with any bonding requirements of the Bidding Documents or with other requirements of the Contract or Bidding Documents, is not properly licensed, or fails to meet the Responsibility Criteria of the Bidding Documents, the Port may require the Bidder to replace the Sub-Bidder with another subcontractor reasonably acceptable to the Port at no change in the Contract Sum or Contract Time.

8. Sub-Bidder Standards: Sub-Bidders shall meet contractual and technical qualification standards, and provide specialized certification, licensing, and/or payment and performance bonding, if required.

9. Small business participation encouraged: The Port’s policy is to encourage the Contractor to solicit and document participation, and to provide and promote the maximum lawful, practicable opportunity for increased participation, by small business enterprises.

C. BID SECURITY

1. Purpose and Procedure. Each Bid shall be accompanied by Bid security payable to the Port in the form required by the Bidding Documents and equal to five percent (5%) of the Base Bid only (i.e., not including any Alternates or Unit Prices). The Bid security constitutes a pledge by the Bidder to the Port that the Bidder will enter into the Contract with the Port in the form provided, in a timely manner, and on the terms stated in its Bid, and will furnish in a timely manner the payment and performance bonds, certificates of insurance, and all other documents required in the Contract Documents. Should the Bidder fail or refuse to enter into the Contract or fail to furnish such documents, the amount of the Bid security shall be forfeited to the Port as liquidated damages, not as a penalty. By submitting a Bid, each Bidder represents and agrees that the Bid security, if forfeited, is a reasonable prediction on the Bid Date of future damages to the Port.

2. Form. The Bid security shall be in the form of a certified or bank cashier’s check payable to the Port or a Bid bond executed by a bonding company reasonably acceptable to the Port, licensed in the State of Washington, registered with the Washington State Insurance Commissioner, possess an A.M. Best rating of “A minus, Fiscal Size Category (FSC) (6) or better, and be authorized by the U.S. Department of the Treasury. The Bid security shall be signed by the person or persons legally authorized to bind the Bidder. Bid bonds shall be submitted using the form included with the Bidding Documents.

3. Retaining Bid Security. The Port will have the right to retain the Bid security of Bidders to whom an Award is being considered until the earliest of either: (a) mutual execution of the Contract, and the Port’s receipt of payment and performance bonds, or (b) the specified time has elapsed so that Bids may be withdrawn, or (c) when all Bids have been rejected.

4. Return of Bid Security. Within sixty (60) days after the Bid Date, the Port will release or return Bid securities to Bidders whose Bids are not to be further considered in Awarding the Contract. Bid securities of the three apparent low Bidders will be held until the Contract has been finally executed, after which all unforfeited Bid securities will be returned. Bid security may be returned in the form provided or by separate payment.

D. SUBMISSION OF BIDS

1. Procedure. The Bid, the Bid security, and other documents required to be submitted with the Bid shall be enclosed in a sealed envelope identified with the Project name and number and the Bidder’s name and address. If the Bid is sent by mail, the sealed envelope...
shall be enclosed in a separate mailing envelope with the notation “SEALED BID ENCLOSED” on the face of the mailing envelope.

a. If a Bid is mailed, it shall be addressed to the Port of Tacoma, Contracts Department, One Sitcum Plaza, Tacoma, WA 98421.

b. If a Bid is delivered, it shall be delivered to the Front Reception Desk, Port of Tacoma, One Sitcum Plaza, Tacoma, WA 98421.

c. The time stamp clock at the Front Reception Desk at One Sitcum Plaza is the Port’s official clock.

2. Deposit. Bids shall be deposited at the designated location prior to the Bid Date indicated in the Advertisement or Invitation to Bid, or any extension thereof made by Addendum. Bids received after the Bid Date and time specified shall be returned without consideration at the discretion of the Port, or rejected at the time of receipt.

3. Delivery. The Bidder assumes full responsibility for timely delivery at the location designated for receipt of Bids.

4. Form. Oral, facsimile, telephonic, electronic, or email Bids are invalid and will not be considered.

E. MODIFICATION OR WITHDRAWAL OF BID

1. After the Bid Date. A Bid may not be modified, withdrawn, or canceled by the Bidder during a sixty (60) day period following the Bid Date, and each Bidder so agrees by virtue of submitting its Bid.

2. Before the Bid Date. Prior to the Bid Date, any Bid submitted may be modified or withdrawn only by notice to the party receiving Bids at the place designated for receipt of Bids. The notice shall be in writing with the signature of the Bidder and shall be worded so as not to reveal the amount of the original Bid. Email notice will not be accepted. It shall be the Bidder’s sole responsibility to verify that the notice has been received by the Port in time to be withdrawn before the Bid opening.

3. Resubmittal. Withdrawn Bids may be resubmitted up to the time designated for the receipt of Bids, provided that they are then fully in conformance with these Instructions to Bidders.

4. Bid Security with Resubmission. Bid security shall be in an amount sufficient for the Bid as modified or resubmitted.

F. COMMUNICATIONS

1. Communications from a Bidder related to these Instructions to Bidders must be in writing to procurement@portoftacoma.com. Communications, including but not limited to, notices and requests by Sub-Bidders shall be made through the Bidder and not directly by a Sub-Bidder to the Port.

1.05 CONSIDERATION OF BIDS

A. OPENING OF BIDS: Unless stated otherwise in the Advertisement or Invitation to Bid or an Addendum, the properly identified Bids received on time will be opened publicly and will be read aloud. An abstract of the Base Bids and any Alternate Bids will promptly (and generally within 24 hours) be made available to Bidders and other interested parties.

B. REJECTION OF BIDS: The Port shall have the right, but not the obligation, to reject any or all Bids for any reason or for no reason, to reject a Bid not accompanied by the required Bid security, or to reject a Bid which is in any way incomplete or irregular.
C. **BIDDING MISTAKES:** The Port will not be obligated to consider notice of claimed Bid mistakes received more than 24 hours after the Bid Date. In accordance with Washington law, a low Bidder that claims error and fails to enter into the Contract is prohibited from Bidding on the Project if a subsequent call for Bids is made for the Project.

D. **ACCEPTANCE OF BID (AWARD)**

1. **Intent to Accept.** The Port intends (but is not bound) to Award a Contract to the Responsible Bidder with the lowest responsive Bid, provided the Bid has been submitted in accordance with the requirements of the Bidding Documents and does not exceed the funds available. The Port has the right to waive any informality or irregularity in any Bid(s) received and to accept the Bid which, in its judgment, is in its own best interests.

2. **Requirements for Award.** Before the Award, the lowest responsive Bidder must be deemed Responsible by the Port and must satisfy all Award Requirements.

E. **BID PROTEST PROCEDURES**

1. **Procedure.** A Bidder protesting for any reason the Bidding Documents, a Bidding procedure, the Port’s objection to a Bidder or a person or entity proposed by the Bidder, including but not limited to, a finding of non-Responsibility, the Award of the Contract or any other aspect arising from, or relating in any way to, the Bidding shall cause a written protest to be filed with the Port within two (2) business days of the event giving rise to the protest. (Intermediate Saturdays, Sundays, and legal holidays are not counted as business days.) The written protest shall include the name of the protesting Bidder, the bid solicitation number and title under which the protest is submitted, a detailed description of the specific factual and legal grounds for the protest, copies of all supporting documents, evidence that the apparent low bidder has been given notice of the protest, and the specific relief requested. The written protest shall be sent by email to procurement@portoftacoma.com.

2. **Consideration.** Upon receipt of the written protest, the Port will consider the protest. The Port may, within three (3) business days of the Port’s receipt of the protest, provide any other affected Bidder(s) the opportunity to respond in writing to the protest. If the protest is not resolved by mutual agreement of the protesting Bidder and the Port, the Contracts Director of the Port or his or her designee will review the issues and promptly furnish a final and binding written decision to the protesting Bidder and any other affected Bidder(s) within six (6) business days of the Port’s receipt of the protest. (If more than one (1) protest is filed, the Port’s decision will be provided within six (6) business days of the Port’s receipt of the last protest.) If no reply is received from the Port during the six (6) business-day period, the protest will be deemed rejected.

3. **Waiver.** Failure to comply with these protest procedures will render a protest waived.

4. **Condition Precedent.** Timely and proper compliance with, and exhaustion of, these protest procedures shall be a condition precedent to any otherwise permissible judicial consideration of a protest.

1.06 **POST BID INFORMATION**

A. **THE LOWEST RESPONSIVE BIDDER SHALL:**

1. **Responsibility Detail Form.** Within 24 hours of the Low Responsive Bidder Selection Notification, the apparent low Bidder shall submit to the Port the Responsibility Detail Form and Project Example Sheets (Section 00 45 13) executed by an authorized company officer. As requested from the Port, the low, responsive Bidder shall provide written...
confirmation that the person signing the Bid on behalf of the Bidder was duly authorized at the time of bid, a detailed breakdown of the Bid in a form acceptable to the Port, and other information required by the Port.

2. Within ten (10) days after the Port’s Notice of Award of the Contract, the apparent low Bidder shall also submit to the Port:
   a. Additional information regarding the use of the Bidder's own forces and the use of subcontractors and suppliers;
   b. The names of the persons or entities (including a designation of the Work to be performed with the Bidder’s own forces, and the names of those who are to furnish materials or equipment fabricated to a special design) proposed for each of the principal portions of the Work (i.e., either a listed Sub-Bidder or a Sub-Bidder performing Work valued at least ten percent (10%) of the Base Bid), consistent with the listing required with the Bid; and
   c. The proprietary names and the suppliers of the principal items or systems of materials and equipment proposed for the Work.

3. Failure to provide any of the above information in a timely manner will constitute an event of breach permitting forfeiture of the Bid security.

4. Bidder Responsibility. The Bidder will be required to establish, to the satisfaction of the Port, the reliability and responsibility of itself and the persons or entities proposed to furnish and perform the Work described in the Bidding Documents. If requested, the Bidder shall meet with the Port to discuss the Bid, including any pricing, the Bid components, and any assumptions made by the Bidder.

5. Sub-Bidder Responsibility. The Responsibility of the Bidder may be judged in part by the Responsibility of Sub-Bidders. Bidders must verify the Responsibility Criteria for each first-tier Sub-Bidder. A Sub-Bidder of any tier that hires other Sub-Bidders must verify Responsibility Criteria for each of its lower-tier Sub-Bidders. The verification shall include a representation that each Sub-Bidders, at the time of subcontract execution, is Responsible and possesses required licenses.

6. Objection. Prior to an Award of the Contract, the Port will notify the Bidder in writing if the Port, after due investigation, has reasonable objection to the Bidder or a person or entity proposed by the Bidder. Upon receiving such objection, the Bidder may, at Bidder’s option, (1) withdraw their Bid, (2) submit an acceptable substitute person or entity with no change in the Contract Time and no adjustment in the Base Bid or any Alternate Bid, even if there is a cost to the Bidder occasioned by such substitution, or (3) file a protest in accordance with the Bidding Documents.

7. Change. Persons and entities proposed by the Bidder, to whom the Port has made no reasonable objection, must be used on the Work for which they were proposed and shall not be changed except with the written consent of the Port.

8. Right to Terminate. The Bidder’s representations concerning its qualifications will be construed as a covenant under the Contract. If a Bidder makes a material misrepresentation on a Qualification Statement, the Port has the right to terminate the Contract for cause and may then pursue any remedies that exist under the Contract or that are otherwise available.
B. INFORMATION FROM OTHER BIDDERS: All other Bidders designated by the Port as under consideration for Award of a Contract shall also provide a properly executed Qualification Statement, if so requested by the Port.

1.07 PERFORMANCE BOND, LABOR AND MATERIAL PAYMENT BOND, AND INSURANCE

A. BOND REQUIREMENTS: Within ten (10) days after the Port’s Notice of Award of the Contract, the successful Bidder shall obtain and furnish statutory bonds pursuant to RCW 39.08 covering the faithful performance of the Contract and the payment of all obligations arising thereunder in the form and amount prescribed in the Contract Documents. The cost of such bonds shall be included in the Base Bid.

B. TIME OF DELIVERY AND FORM OF BONDS: The successful Bidder shall deliver an original copy of the required bonds to the Port, 1 Sitcum Plaza, Tacoma, WA 98421, within the time specified in the Contract Documents.

C. INSURANCE: a certificate of insurance from the Bidder’s insurance company that meets or exceeds all requirements of the Contract Documents;

D. GOVERNMENTAL REQUIREMENTS: Notwithstanding anything in the Bidding or Contract Documents to the contrary, the Bidder shall provide all bonding, insurance and permit documentation as required by governmental authorities having jurisdiction for any portions of the Project.

1.08 FORM OF AGREEMENT

A. FORM TO BE USED: The Contract for the Work will be written on the form(s) contained in the Bidding Documents, including any General, Supplemental, or Special Conditions, and the other Contract Documents included with the project manual.

B. CONFLICTS: In case of conflict between the provisions of these Instructions and any other Bidding Document, these Instructions shall govern. In case of conflict between the provisions of the Bidding Documents and the Contract Documents, the Contract Documents shall govern.

C. CONTRACT DELIVERY. Within ten (10) days after Notice of Award, the Bidder shall submit a signed Contract to the Port in the form tendered to the Bidder and without modification.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED
PART 1 - GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for substitutions during bidding.

1.02 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

B. The bidding documents include performance specifications for products and equipment which meet project requirements. In those cases where a representative item or manufacturer is named in the specification, it is provided for the sole purpose of identifying a product meeting the required functional performance, and where the words “or equal” are used, a substitution request as further described, is not required.

C. Where non-competitive or sole source products or manufacturers are explicitly specified with the words “or approved equal,” or “Engineer approved equal,” or “as approved by the Engineer” are used, they shall be taken to mean “or approved equal.” In these cases a substitution request, as further described in this section, is required.

1.03 SUBMITTALS

A. Pre-Bid Substitution Requests: Submit one PDF of the substitution request form along with all supporting documentation for consideration of each request. Identify product or fabrication or installation method to be replaced. Include Drawing numbers and titles. Substitution requests prior to bid date may originate directly from a prime bidder, or from a prospective supplier or subcontractor.

1. Substitution Request Form: Use copy of form located in Section 00 43 25.
2. Documentation: Show compliance with requirements for substitutions with the following, as applicable:
   a. Statement indicating why specified product or fabrication or installation cannot be provided
   b. Coordination information, including a list of changes or modifications needed to other parts of the Work that will be necessary to accommodate proposed substitution
   c. Product Data, including drawings and descriptions of products and fabrication and installation procedures
   d. Samples, where applicable or requested
   e. Certificates and qualification data, where applicable or requested
   f. Research reports evidencing compliance with building code in effect for project
3. Engineer's Action: Engineer will review substitution requests if received electronically to procurement@portoftacoma.com at least 7 days prior to the bid opening date set forth in these documents. Substitution requests received after this time will not be reviewed.
   a. Forms of Acceptance: Substitution requests will be formally accepted via written addendum prior to the bid opening date. Bidders shall not rely upon approvals made in any other manner.
   b. Use product originally specified if Engineer does not issue a decision on use of a proposed substitution within time allocated.
c. The Port’s decision of approval or disapproval of a proposed substitution shall be final.

B. Substitutions will not be considered when:

1. Indicated or implied on shop drawings or product data submittals without formal request submitted in accordance with this Section.

2. Acceptance will require substantial revision of Contract Documents or other items of the Work.

3. Submittal for substitution request does not include point-by-point comparison of proposed substitution with specified product.

1.04 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 EXISTING CONDITIONS

A. Certain information relating to existing surface and subsurface conditions and structures is available to bidders online at www.portoftacoma.com, but will not be part of the Contract Documents, as follows:

   a. This survey identifies grade elevations prepared primarily for the use of Engineer in establishing new grades and identifying natural water shed.

2. Terminal 3 & 4 Backlands Redevelopment - Gate Complex, dated 9/22/17.

3. Time Oil Information:
   a. Site Assessment and Remedial Investigation Terminal 4, Slip 5, Port of Tacoma, dated June 1996
   b. Contamination plume graphic, Cascade Pole & Time Oil remant contamination
   c. Memorandum, Site Inspection and Groundwater Sampling, Former Time Oil Site, 6/22/18.

1.02 AVAILABILITY

A. Reference Documents are available online through the Port of Tacoma’s Website www.portoftacoma.com. Click on "Contracts," "Procurement," and then the Procurement Number.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY
A. This Section provides the notification required for disclosure of asbestos, lead-containing, or other hazardous materials.

1.02 HAZARDOUS MATERIALS NOTICE
A. The Port is reasonably certain that asbestos and lead will not be disturbed by the project. If the Contractor encounters material suspected of containing lead or asbestos which will interfere with the execution of the work, the Contractor shall stop work and notify the Engineer.

1.03 NOTIFICATION AND SUSPENSION
A. In the event the Contractor detects the presence of potentially contaminated materials not previously identified in this specification, the Contractor shall immediately notify the Port. Following such notification by the Contractor, the Port shall in turn notify the various governmental and regulatory agencies concerned with the presence of potentially contaminated materials, if warranted. Depending upon the type of contaminated materials identified, the Port may suspend work in the vicinity of the discovery under the provisions of General Conditions.

B. Following completion of any further testing necessary to determine the nature of the materials involved, the Port will determine how the material shall be managed. Although the actual procedures used in resuming the work shall depend upon the nature and extent of the potentially contaminated material, the following alternate methods of operation are foreseen as possible:
1. Contractor to resume work as before the suspension
2. Contractor to move its operations to another portion of the work until measures to eliminate any hazardous conditions can be developed and approved by the appropriate regulatory agencies
3. The Port to direct the Contractor to dispose or treat the material in an approved manner
4. The Port to terminate or modify the Contract

BIDDER'S NAME: ________________________________

PROJECT TITLE: EAST SITCUM TERMINAL STORMWATER IMPROVEMENTS & NORTH INTERMODAL YARD STORMWATER TREATMENT

The undersigned Bidder declares that it has read the specifications, understands the conditions, has examined the site, and has determined for itself all situations affecting the work herein bid upon. Bidder proposes and agrees, if this proposal is accepted, to provide at Bidder’s own expense, all labor, machinery, tools, materials, etc., including all work incidental to, or described or implied as incidental to such items, according to the contract documents of the Port of Tacoma, and that the Bidder will complete the work within the time stated, and that Bidder will accept in full payment therefore the lump sum or unit price(s) set forth below:

Proposed Bid Price. (Note: Show prices in figures only.) Complete Installation:

Evaluation of Bids. In accordance with the provisions of these Contract Documents, Bids will be evaluated to determine the lowest Base Bid Subtotal offered by a responsible Bidder submitting a responsive bid.

Schedule of Unit Prices. The following unit prices are proposed to apply only in the event of additions to or deletions from the work required and ordered. All prices shall include complete installation without Washington State Sales Tax. The bidder shall propose a price for each item; failure to propose a price for each item may render the bid non-responsive. The Port reserves the right to accept or reject the unit prices proposed.

Progress Payment Retention. In accordance with RCW 60.28.011, the undersigned elects that, during the life of the Contract, the money withheld from Contract progress payments be retained as indicated below. Failure to indicate a choice shall be construed as approval of Item (a).

a. Retained percentages will be retained by the Port in a fund; or (Initials)

b. Deposited by the Port in an interest-bearing account in a bank, mutual savings bank or savings and loan association; or (Initials)

c. Placed in escrow with a bank or trust company; or (Initials)

d. Retainage Bond in an amount equal to 5% of the Contract Sum plus Change Orders. (Initials)

The retainage bond shall be based on the form furnished in Section 00 61 23 or otherwise acceptable to the Port and duly completed and signed by a licensed surety or sureties registered with the Washington State Insurance Commissioner and on the currently authorized insurance list published by the Washington State Insurance Commissioner. The surety or sureties must be rated at least A minus, FSC(6), or higher by A.M. Best Rating Guide and be authorized by the Federal Department of the Treasury. Attorneys-in-fact who sign the retainage bond must file with each bond a certified and effective Power of Attorney statement.

NOTE: Accounts and deposits made under Items (b) and (c), above, must be in a bank which is listed on the State of Washington Public Depositaries current list.

Addenda. Bidder acknowledges review of all Addenda through No. _____________
Bid Security. A certified check, cashier’s check, or other obligation of a bank, or a bid security bond in substantially the form set forth in Section 00 43 13, Bid Security Form for at least 5% of the total bid without sales tax, accompanies this bid.

Principal Subcontractors/Suppliers. The bidder shall list below the name of each subcontractor or supplier to whom the bidder proposes to subcontract the portions of the work listed below, or name itself for the work.

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.

Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

Project Form: 00 43 25 -
The low responsive Bidder shall be required to complete this Responsibility Detail Form as specified in Section 00 21 00 – Instructions to Bidders. This completed Responsibility Detail Form shall be submitted electronically (pdf) via email to the Contact(s) identified in the Low Responsive Bidder Selection Notification. THIS IS NOT TO BE SUBMITTED WITH A BID.

Bidder’s Company Name: ____________________________________________________________

For the below Mandatory Bidder Responsibility Criteria, please check the appropriate box.

1.0 MANDATORY BIDDER RESPONSIBILITY CRITERIA

A. The Bidder shall meet the following mandatory responsibility criteria as described in RCW 39.04.350(1). The Bidder shall be rejected as not responsible if any answer to questions 1 through 5 is “No” or any answer to questions 6 through 8 is “Yes”.

1. Does the Bidder have a Certificate of Registration in compliance with RCW 18.27?
   - Yes   - No

2. Does the Bidder have a current Washington State Unified Business Identifier number?
   - Yes   - No

3. Does the Bidder have Industrial Insurance Coverage for the Bidder's employees working in Washington State as required in RCW 51?
   - Yes   - No

4. Does the Bidder have an Employment Security Department number as required in RCW 50?
   "Attach letter dated within 6 months of bid opening date.
   "Request a letter electronically by clicking on the following link https://fortress.wa.gov/esd/twt/pwcinternet/ or by emailing a request to publicworks@esd.wa.gov."
   - Yes   - No

5. Does the Bidder have a Washington State Excise Tax Registration number as required in RCW 82?
   - Yes   - No

6. Has the Bidder been disqualified from bidding on any public works project under RCW 39.06.010 or 39.12.065(3)?
   - Yes   - No

7. Has the Bidder violated RCW 39.04.370 more than one time as determined by the Washington State Department of Labor and Industries?
   - Yes   - No

8. Has the Bidder ever been found to be out of compliance with Apprenticeship Utilization requirements of RCW 39.04.320?
   - Yes   - No

If any answer to questions 1 through 5 is “No” or any answer to questions 6 through 8 is “Yes” - STOP HERE and contact the Contract Administrator. The Bidder is not responsible for this Work. Otherwise proceed to 1.1. Provide attached to this completed form documentation to confirm responsibility criteria.
For remaining criteria below, check or fill-out the appropriate box. Based upon the answer provided by the Bidder, the Port may request additional information or seek further explanation. As needed, provide backup documentation for any explanations listed below.

1.1 CONTRACT AND REGULATORY HISTORY
A. The Port will evaluate whether the Bidder’s contract and regulatory history demonstrates an acceptable record of past project performance and consistent responsibility. The Bidder shall answer the following questions. The Bidder may be rejected as not responsible if any answer to questions 1 through 5 below is “Yes”.

1. Has the Bidder had a contract terminated for cause or default, in the last 5 years?
   □ Yes  □ No  If YES, explain below.

2. Has the Bidder required a Surety to take over all, or a portion of, a project to cure or respond to an asserted default or material breach of contract on the part of the Bidder on any public works project, in the last 5 years?
   □ Yes  □ No  If YES, explain below.

3. Have the Bidder and major Sub-Bidders been in bankruptcy, reorganization and/or receivership on any public works project, in the last 5 years?
   □ Yes  □ No  If YES, explain below.

4. Have the Bidder and major Sub-Bidders been disqualified by any state or local agency from being awarded and/or participating on any public works project, in the last 5 years?
   □ Yes  □ No  If YES, explain below.

5. Are the Bidder and major Sub-Bidders currently a party to a formal dispute resolution process with the Port—i.e., a pending mediation, arbitration or litigation.
   □ Yes  □ No  If YES, explain below.
1.2  ACCIDENT/INJURY EXPERIENCE
   A. The Port will evaluate the Bidder’s accident/injury Experience Modification Factor (“EMF”) from the Washington State Department of Labor and Industries to assess whether the Bidder has an acceptable safety record preventing personal injuries on projects.
   B. List the Bidder’s accident/injury EMF for the last five (5) years. An experience factor is calculated annually by the Washington State Department of Labor and Industries.

<table>
<thead>
<tr>
<th>Year</th>
<th>Effective Year</th>

</tr>
</tbody>
</table>

If the Bidder has received an EMF of greater than 1.0 for any year, explain the cause(s) of the designation and what remedial steps were taken to correct the EMF. The Bidder may be rejected as not responsible if the Bidder’s EMF is greater than 1.0 and sufficient remedial steps have not been implemented.

1.3  WORK PERFORMED BY BIDDER
   A. The Bidder shall state the amount of the Contract Work, as an equivalent to the Total Bid Price, excluding taxes, insurance and bonding, the Bidder will execute with its own forces. 

   ____ %

1.4  SUBCONTRACTOR VERIFICATION
   A. The Bidder and its subcontractors to verify that its subcontractors at each tier meet the responsibility criteria as required by RCW 39.06.020 and 39.04.350.
   1. Bidder shall verify major subcontractors meet the responsibility criteria required. Fill out one Port of Tacoma Public Works Project Bidder Evaluation Checklist for Subcontractors for each major subcontractor and submit to the Port with this form. Backup documentation is not required to be submitted.

1.5  PROJECT EXAMPLE SHEETS
   A. As part of completing this Responsibility Detail Form, submit the following information with the completed Responsibility Detail Form:
      1. Bidder’s recent job resume including a list of similar projects performed and contact information for the similar project Owner(s).
      2. Resumes of bidder’s proposed project manager and job superintendent.

   B. The Bidder’s failure to provide the required project information may result in a determination of the Bidder being declared non-responsible by the Port.

   C. The Bidder shall submit this completed, SIGNED Responsibility Detail Form electronically (PDF), with all requested backup documentation, via email to the Contact(s) noted on the Low Responsive Bidder Selection Notification.
The Low responsive Bidder shall complete the Responsibility Detail Form, attach all documentation and submit to the Port within 24 hours following receipt of the Low, Responsive Bidder Selection Notification. All forms shall be submitted electronically (PDF) via email to the contact(s) listed on the Selection Notice. Note, the same project may be used to demonstrate experience across multiple categories if applicable.

By completing and signing this Responsibility Detail Form, the Bidder is certifying that the information contained within the form, and the backup documentation, and any additional information requested by the Port is true and complete. The Bidder’s failure to disclose the required information or the submittal of false or misleading information may result in the rejection of the Bidder’s bid, revocation of award or contract termination.

The information provided herein is true and complete.

(Phone No.)

BACKGROUND AND REPRESENTATIONS:
The Port has caused Drawings, Specifications, and other Contract Documents to be prepared for the performance of Work on the Project.

The Port publicly solicited bids on the Contract Documents. The Contractor submitted a bid to the Port on the __________ day of __________, 20___ to perform the Work.

The Contractor represents that it has the personnel, experience, qualifications, capabilities, and means to accomplish the Work in strict accordance with the Contract Documents, within the Contract Time and for the Contract Price, and that it and its Subcontractors satisfy the responsibility criteria set forth in the Contract Documents, including any supplemental responsibility criteria.

The Contractor further represents that it has carefully examined and is fully familiar with all provisions of the Contract Documents, including any Addenda, that it has fully satisfied itself as to the nature, location, difficulty, character, quality, and quantity of the Work required by the Contract Documents and the conditions and other matters that may be encountered at or near the Project site(s), or that may affect performance of the Work or the cost or difficulty thereof including all applicable safety and site responsibilities, and that it understands and can satisfy all scheduling and coordination requirements and interim milestones.

AGREEMENT:

The Port and the Contractor agree as follows:

1.0 CONTRACTOR TO FULLY PERFORM THE WORK

The Contractor shall fully execute and complete the entire Work described in the Contract Documents, except to the extent specifically indicated in the Agreement, the General Conditions of the Contract (as well as any Supplemental, Special or other Conditions included in the project manual), the Drawings, the Specifications, and all Addenda issued prior to, and all modifications issued after, execution of the Contract.

2.0 DATE OF COMMENCEMENT

The date of commencement of the Work, which is the date from which the Contract Time is measured, shall be fixed as the date this agreement is executed.

3.0 CONTRACT TIME AND LIQUIDATED DAMAGES

The Contractor shall achieve all interim milestones as set forth in the Contract Documents and Substantial Completion of the entire Work not later than 75 calendar days from contract execution, subject to adjustments of this Contract Time as provided in the Contract Documents. The Contractor shall achieve Final Completion of the Work within 30 calendar days of the date on which Substantial Completion is achieved.

Provisions for liquidated damages as a reasonable estimate of future loss, as of the date of this Agreement, are included in the Contract Documents. The parties agree that the stated liquidated damages are not penalties individually or cumulatively.

Project No. 201054.01 & 201055.01
Contract No. 070819
The liquidated damages for failure to achieve Substantial Completion by the prescribed date shall be $0 per calendar day. After the prescribed Final Completion date, the liquidated damages for failure to achieve Final Completion shall be $0 per calendar day.

Liquidated damages assessed by the Port will be deducted from monies due to the Contractor, or from monies that will become due to the Contractor. The liquidated damages, as specified and calculated herein, shall be levied for each and every calendar day that Substantial Completion and/or Final Completion of the work is delayed beyond the prescribed completion dates, or the completion dates modified by the Port for extensions of the contract time.

4.0 CONTRACT PRICE

In accordance with the Contractor’s bid dated ______________, the Port shall pay the Contractor in current funds for the Contractor’s performance of the Contract the Contract Price of ______________ Dollars ($____________), subject to additions and deductions as provided in the Contract Documents. State and local sales tax is not included in the Contract Price but will be due and paid by the Port with each progress payment.

7.0 INSURANCE AND BONDS

The Contractor shall purchase and maintain insurance and provide bonds as set forth in the Contract Documents.

This Agreement is entered into as of the day and year first written above:

PORT OF TACOMA

P.O. BOX 1837

TACOMA, WA 98401-1837

KNOW ALL MEN BY THESE PRESENTS:

That ______________________________________ as Principal, hereinafter called Contractor, and _____________________________________________ as Surety, hereinafter called Surety, are held and firmly bound unto the Port of Tacoma as Obligee, hereinafter called the Port, in the amount of ___________________________________________________________ Dollars ($______________) for the payment whereof Contractor and Surey bind themselves, their executors, administrators, legal representatives, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS:

Contractor shall execute an agreement with the Port for ________________________________, a copy of which Contract is by reference made a part hereof (the term “Contract” as used herein to include the aforesaid agreement together with all the Contract Documents, addenda, modifications, all alterations, additions thereto, deletions therefrom and any other document or provision incorporated into the Contract) and is hereinafter referred to as the Contract.

This bond is executed and issued pursuant to the provisions of Chapter 39.08 Revised Code of Washington.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that if Contractor shall promptly and faithfully perform said Contract, then this obligation shall be null and void; otherwise it shall remain in full force and effect.

FURTHER:

A. Surety hereby waives notice of any alterations, change orders, modifications or extensions of time made by the Port.

B. Surety recognizes that the Contract includes provisions for additions, deletions and modifications to the work or Contract Time and the amounts payable to the Contractor. Subject to the limitations contained in (A) above, Surety agrees that no such addition, deletion, or modification, or any combination thereof, shall avoid or impair Surety’s obligation hereunder.

C. Whenever Contractor has been declared by the Port to be in default, and the Port has given Surety notice of the Port’s determination of such default, Surety shall promptly (in no event more than fifteen (15) days following receipt of such notice) advise the Port of its intended action to:

1. Remedy the default within fifteen (15) days following its advice to the Port as set forth above, or
2. Assume within fifteen (15) days, following its advice to the Port as set forth above, completion of the Contract in accordance with the Contract Documents and become entitled to payment of the balance of the Contract Sum, or

3. Pay the Port upon completion of the Contract, in cash, the cost of completion together with all other reasonable costs and expenses incurred by the Port as a result of the Contractor’s default, including but not limited to, those reasonable costs and expenses incurred by the Port in its efforts to mitigate its losses, which may include but are not limited to, attorney’s fees and efforts to complete the Work prior to the Surety exercising the options available to it as set forth herein.

D. If the Port shall commence suit and obtain judgment against the Surety for recovery hereunder, then the Surety, in addition to such judgment, shall pay all costs and attorney’s fees incurred by the Port in enforcement of its rights hereunder. Venue for any action arising out of or in connection with this bond shall be in Pierce County, Washington.

E. No right or action shall accrue on this bond to or for the use of any person or corporation other than the Port of Tacoma.

Signed and Sealed the_________ day of ____________, 20___.

IMPORTANT: Surety companies executing bonds must have an A.M. Best Rating of A- FSC of (6) or higher, have an underwriting limitation of not less than the Contract Sum, and be authorized to transact business in the State of Washington.

KNOW ALL MEN BY THESE PRESENTS:

That _____________________________________ as Principal, hereinafter called Contractor, and  
____________________________________________ as Surety, hereinafter called Surety, are held  
and firmly bound unto the Port of Tacoma as Obligee, hereinafter called the Port, and all others entitled  
to recovery hereunder, in the amount of ___________________________________________ Dollars  
($______________________) for the payment whereof Contractor and Surety bind themselves, their  
executors, administrators, legal representatives, successors and assigns, jointly and severally firmly by  
these presents.

WHEREAS:

Contractor shall execute an agreement with the Port for ____________________________ a copy of which  
Contract is by reference made a part hereof (the term "Contract" as used herein to include the aforesaid  
agreement together with all the Contract Documents, addenda, modifications, alterations, additions  
thereto, deletions therefrom and any other documents or provisions incorporated into the Contract) and is  
hereinafter referred to as the Contract.

This bond is executed pursuant to the provisions of Chapter 39.08 Revised Code of Washington.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that if Contractor shall promptly  
make payment to all claimants, as hereinafter defined, for all labor and material used or reasonably  
required for use in the performance of the Contract and shall indemnify and save the Port harmless from  
all cost and damage by reason of Contractor’s default, then this obligation shall be null and void;  
otherwise it shall remain in full force and effect, subject to the following conditions:

A. The Surety hereby waives notice of any alterations, change orders, modifications or extensions  
of time made by the Port.

B. Surety recognizes that the Contract includes provisions for additions, deletions and  
modifications to the Work or Contract Time and the amounts payable to the Contractor. Surety  
agrees that no such addition, deletion, or modification, or any combination thereof, shall avoid or  
impair Surety’s obligation hereunder.
C. Surety hereby agrees that every person protected under the provisions of RCW 39.08.010 who has not been paid as provided under the Contract and pursuant to RCW 39.08.010, less any amounts withheld pursuant to statute, and less retainage withheld pursuant to RCW 60.28, after the expiration of a period of thirty (30) days after the date on which the completion of the Contract in accordance with RCW 39.08, may sue on this bond, prosecute the suit to final judgment as may be due claimant, and have execution thereon including recovery of reasonable costs and attorney's fees as provided by RCW 39.08. The Port shall not be liable for the payment of any costs or expenses of any such suit.

D. No suit or action shall be commenced hereunder by any claimant unless claimant shall have given the written notices to the Port, and where required, the Contractor, in accordance with RCW 39.08.030.

E. The amount of this bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Surety of claims which may be properly filed in accordance with RCW 39.08 whether or not suit is commenced under and against this bond.

F. If any Claimant shall commence suit and obtain judgment against the Surety for recovery hereunder, then the Surety, in addition to such judgment and attorney fees as provided by RCW 39.08.030, shall also pay such costs and attorney fees as may be incurred by the Port as a result of such suit. Venue for any action arising out of or in connection with this bond shall be in Pierce County, Washington.

Signed and Sealed this ______ day of _________, 20___.

IMPORTANT: Surety companies executing bonds must have an A.M. Best Rating of A- FSC of (6) or higher, have an underwriting limitation of not less than the Contract Sum, and be authorized to transact business in the State of Washington.

END OF SECTION
KNOW ALL MEN BY THESE PRESENTS: That we ____________________________, a corporation existing under and by virtue of the laws of the State of Washington and authorized to do business in the State of Washington, as Principal, and _______________________________, a corporation organized and existing under the laws of the State of ___________________________ and authorized to transact the business of surety in the State of Washington, as Surety, are jointly and severally held and bound unto the PORT OF TACOMA, hereinafter called Port, as Obligee, and are similarly held and bound unto the beneficiaries of the trust fund created by RCW 60.28 as their heirs, executors, administrators, successors and assigns in the penal sum of ____________________________ _______________ (_____________) plus 5% of any increases in the contract amount that have occurred or may occur, due to change orders, increases in the quantities or the addition of any new item of work.

WHEREAS, on the _________ day of ______________, the said Principal herein executed Contract No. ____________ with the Port for _____________________________________________.

WHEREAS, said contract and RCW 60.28 require the Port to withhold from the Principal the sum of 5% from monies earned by the Principal on estimates during the progress of the work, hereinafter referred to as earned retained funds.

WHEREAS, the Principal has requested that the Port accept a bond in lieu of earned retained funds as allowed under Chapter 60.28 RCW.

NOW THEREFORE, this obligation is such that the Surety, its successors, and assigns are held and bound unto the Port and unto all beneficiaries of the trust fund created by RCW 60.28.011(1) in the aforesaid sum. This bond, including any proceeds therefrom, is subject to all claims and liens and in the same manner and priority as set forth for retained percentages in Chapter 60.28 RCW. The condition of this obligation is also that if the Principal shall satisfy all payment obligations to persons who may lawfully claim under the trust fund created pursuant to Chapter 60.28 RCW, to the Port, and indemnify and hold the Port harmless from any and all loss, costs, and damages that the Port may sustain by release of said retainage to Principal, then this obligation shall be null and void, provided the Surety is notified by the Port that the requirements of RCW 60.28.021 have been satisfied and the obligation is duly released by the Port.
IT IS HEREBY DECLARED AND AGREED that the Surety shall be liable under this obligation as Principal. The Surety will not be discharged or released from liability for any act, omission or defenses of any kind or nature that would not also discharge the Principal.

IT IS HEREBY FURTHER DECLARED AND AGREED that this obligation shall be binding upon and inure to the benefit of the Principal, the Surety, the Port, the beneficiaries of the trust fund created by Chapter 60.28 Revised Code of Washington (RCW) and their respective heirs, executors, administrators, successors and assigns.

IN WITNESS WHEREOF, said Principal and said Surety have caused these presents to be duly signed and sealed this __________ day of ______________, 201__.

Tacoma, WA 98401-1837

Project Title: Port fills in

The Undersigned ________________________________, (Contractor Name and Address) hereinafter referred to as the Contractor, has directed the Port of Tacoma, hereinafter referred to as the Port, to deliver to ___________________________ (Name of Bank), hereinafter referred to as “You”, its checks for retainage under the Contract which shall be payable to You and the Contractor jointly, and which shall be held and disposed of by You in accordance with the following instructions and upon the terms and conditions hereinafter set forth.

ESCROW INSTRUCTIONS:

1. Checks made payable to You and the Contractor jointly upon delivery to You shall be endorsed by the Contractor and by You and then forwarded for collection by You. The moneys will then be used by You to purchase, as directed by the Contractor, bonds or other securities (hereinafter collectively referred to as “Securities”) chosen by the Contractor and approved by the Port. Attached is a list of Securities approved by the Port. Other Securities, except stocks, may be selected by the Contractor, subject to express prior written approval of the Port, in its sole and absolute discretion. The purchase of Securities shall be in a form which shall allow You alone to reconvert such Securities into money if You are required to do so by the Port as provided in Paragraph 4 of this Escrow Agreement.

2. When and as interest on the Securities held by You pursuant to this Agreement accrues and is paid, You shall collect such interest and forward it to the Contractor at its address designated in the first paragraph unless otherwise directed by the Contractor.

3. You are not authorized to deliver to the Contractor all or any part of the checks or moneys received by You or the Securities held by You pursuant to this Agreement (or moneys derived from the sale of such Securities, or the negotiation of the Port’s checks) except in accordance with written instructions from the Port’s Sr. Contract Administrator. Compliance with such instructions shall relieve You of any further liability related thereto. The estimated final completion date on the Contract underlying this Agreement is ______________.

4. In the event the Port orders You to do so in writing, You shall, within ten (10) days of receipt of such order, reconvert into money some or all of the Securities held by You pursuant to this Agreement, as required to satisfy the Port’s order, and return such money, together with any other moneys held by You hereunder and required to satisfy the Port’s order, to the Port. Consent of Contractor shall not be required for payment to the Port hereunder, and objection or other communication from Contractor shall not prevent, delay, or otherwise affect payment to the Port forthwith in accordance with the Port's order and this Agreement.

5. The Contractor agrees to pay You as compensation for Your services hereunder as follows: Payment of all fees shall be the sole responsibility of the Contractor and shall not be deducted from any checks, moneys, Securities, or other property placed with You or held by you pursuant to this Agreement until and unless the Port directs the release thereof to the Contractor, whereupon You shall be granted a first lien upon such property released and shall be entitled to reimburse Yourself from such property for the entire amount of Your fees as provided for hereinabove. In the event that You
are made a party to any litigation with respect to the checks, moneys, Securities, or other property held by You hereunder, or in the event that the conditions of this escrow are not promptly fulfilled or that You are required to render any service not provided for in these instructions, or that there is any assignment of the interests of this escrow or any modification hereof, You shall be entitled to reasonable compensation for such extraordinary services from the Contractor and reimbursement from the Contractor for all costs and expenses, including reasonable attorney fees occasioned by such default, delay, controversy or litigation.

6. This Agreement shall not be binding until executed by Contractor and Port, and accepted by You.

7. This instrument contains the entire agreement between You, the Contractor, and the Port with respect to this escrow. There are no terms, obligations, covenants, or conditions regarding this escrow other than those contained herein, and You are not a party to nor bound by any instrument or agreement regarding this escrow other than this Agreement. You shall not be required to take notice of any default or any other matter under the Contract nor be bound by nor required to give notice or demand under the Contract, nor required to take any action whatsoever except as herein expressly provided. You shall not be liable for any loss or damage not caused by Your own negligence or wilful misconduct.

8. The foregoing provisions shall be binding upon the assigns, successors, personal representatives and heirs of the parties hereto.

9. The Contractor’s Federal Income Tax Identification number is __________________________.

The undersigned have read and hereby approve the instructions as given above governing the administration of this escrow and do hereby execute this Agreement this ___ day of ____________, 20__.

INSTRUCTIONS FOR RETAINAGE ESCROW AGREEMENTS:

Whenever possible, use the Port of Tacoma (Port) approved Escrow Agreement. The Port, at its discretion, may or may not accept an agreement form from another source.

Please return all three (3) originals of the Agreement, with completed contractor and bank information and signatures, and the escrow account number. The Port will review and sign the Agreement and distribute copies. One (1) original will go directly to the Bank, one (1) original will be returned to the Contractor.

Fill in the following on the Escrow Agreement:

1) Page 1 – Escrow Account Number
2) Page 1 – Name, address, and phone number of the Bank
3) Page 2 – Signature, typed/printed name, date, and the title of the Contractor Signatory.
4) Page 2 – Signature, typed/printed name, date, and the title of the Authorized Bank Officer signatory.

Do not fill in the date in the paragraph directly following paragraph 9. The Port will fill in this date once the document has been fully executed by the Port.

ARTICLE 1 - THE CONTRACT DOCUMENTS

1.01 GENERAL

A. Contract Documents form the Contract. The Contract Documents are enumerated in the Agreement between the Port and Contractor ("Agreement"). Together, the Contract Documents form the Contract. The Contract represents the entire integrated agreement between the parties and supersedes all prior negotiations, representations or agreements, either written or oral. The Contract may be amended or modified only in writing and only as set forth in the Contract Documents.

B. Headings only for convenience. The titles or headings of the sections, divisions, parts, articles, paragraphs, and subparagraphs of the Contract Documents are intended only for convenience.

1.02 DEFINITIONS

A. "Contractor" means the person or entity contracting to perform the Work under these Contract Documents. The term Contractor includes the Contractor's authorized representative for purposes of identifying obligations and responsibilities under the Contract Documents, including the ability to receive notice and direction from the Port.

B. "Day" means a calendar day unless otherwise specifically designated.

C. "Drawings" are the graphic and pictorial portions of the Contract Documents showing the design, location, and dimensions of the Work, including plans, elevations, sections, details, and diagrams.

D. "Engineer" is the Port employee generally tasked with administering the Project on the Port's behalf and the person with overall responsibility for managing, for the Port, the Project scope, budget, and schedule. To the extent empowered, the Engineer may delegate to others at the Port (such as a Project Manager or Inspector) the responsibility for performing delegated responsibilities of the Engineer's under this Contract.

E. "Port" means the Port of Tacoma. The Port will designate in writing a representative (usually the Engineer) who shall have the authority to act on the Port's behalf related to the Project. The "Port" does not include staff, maintenance, or safety workers, or other Port employees or consultants that may contact the Contractor or be present at the Project site.

F. "Project" is identified in the Agreement and is the total construction to be performed by or through the Port, of which the Work performed under the Contract Documents may be only a part.

G. "Specifications" are those portions of the Contract Documents that specify the written requirements for materials, equipment, systems, standards, and workmanship for the Work and for the performance of related services.

H. "Subcontractor" means a person or entity that contracts directly with the Contractor to perform any Work under the Contract Documents. "Subcontractor of any tier" includes Subcontractors as well as any other person or entity, including suppliers, that contracts with a Subcontractor or a lower-tier Subcontractor (also referred to as "Sub-subcontractors") to perform any of the Work.

I. "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all labor, tools, equipment, materials, services and incidentals necessary to complete all obligations under the Contract Documents. The Work may constitute only a part of the Project, and may interface, and need to be coordinated with, the work of others.
1.03 INTENT OF THE CONTRACT DOCUMENTS

A. Intent of Contract Documents. The intent of the Contract Documents is to describe the complete Work and to include all items necessary for the proper execution and completion of the Work by the Contractor.

B. Contract Documents are complementary. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all. Performance by the Contractor is required to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

C. No third party contract rights. The Contract Documents shall not create a contractual relationship of any kind: (1) between the Port and a Subcontractor of any tier (although the Port does not waive any third-party beneficiary rights it may otherwise have as to Subcontractors of any tier), (2) between the Contractor and the Engineer or other Port employees or consultants, or (3) between any persons or entities other than the Port and Contractor.

1.04 CORRELATION OF THE CONTRACT DOCUMENTS

A. Precedence. In the event of a conflict or discrepancy between or among the Contract Documents, the conflict or discrepancy will be resolved by the following order of precedence, with an addendum or Change Order having precedence over an earlier document, and computed dimensions having precedence over scaled dimensions, and large scale drawings taking precedence over small scale drawings:

1. The signed Agreement
   a. Supplemental Conditions
   b. General Conditions
   c. Division 01 General Requirements of Specifications
   d. All other Specifications, including all remaining divisions, material and system schedules and attachments, and Drawings
   e. All other sections in Division 00 not specifically identified herein by Section

B. Inconsistency between or among Contract Documents. If there is any inconsistency between the Drawings, schedules, or Specifications, or any attachments, the Contractor will make an inquiry to the Engineer to determine how to proceed, and, unless otherwise directed, the Contractor will provide the better quality or greater quantity of any work or materials, as reasonably interpreted by the Port, at no change in the Contract Sum or Contract Time. Thus, if Work is shown on Drawings but not contained in Specifications or schedules, or contained in Specifications or schedules but not shown on the Drawings, the Work as shown or contained will be provided at no change in the Contract Sum or Contract Time, according to Specifications or Drawings to be issued by the Port.

C. Inconsistency with law. In the event of a conflict between the Contract Documents and applicable laws, codes, ordinances, regulations, or orders of governmental authorities having jurisdiction over the Work, or in the event of any conflict between such laws, the most stringent requirements govern.

D. Organization of Contract Documents. The organization of the Specifications and Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of the Work to be performed. The Port assumes no responsibility for the division and proper coordination of Work between particular Subcontractors.
E. Bid quantities are estimates only. Any “bid quantities” set forth in the Contract Documents are estimates only. The Port does not warrant that the actual amount of Work will correspond to any estimates. The basis of payment will be the actual quantities performed in accordance with the Contract Documents.

1.05 OWNERSHIP OF THE CONTRACT DOCUMENTS

A. Port owns all Contract Documents. All Drawings, Specifications, and other Contract Documents furnished to the Contractor are Port property, and the Port retains all intellectual property rights, including copyrights. The Contract Documents are to be used only with respect to the Project.

ARTICLE 2 - PORT OF TACOMA

2.01 AUTHORITY OF THE ENGINEER

A. Engineer will be Port’s representative. The Engineer or the Engineer’s designee will be the Port’s representative during the Project and will administer the Project on the Port’s behalf.

B. Engineer may enforce all obligations. The Engineer has the authority to enforce all requirements imposed on the Contractor by the Contract Documents.

C. Only Engineer is agent of Port. Other than the Engineer, no other Port employee or consultant is an agent of the Port, and none are authorized to agree on behalf of the Port to changes in the Contract Sum or Contract Time, nor to waive provisions of the Contract Documents, nor to direct the Contractor to take actions that change the Contract Sum or Contract Time, nor to accept notice of protests or claims on behalf of the Port.

2.02 ADMINISTRATION OF THE CONTRACT

A. Port will administer Contract. The Port will provide administration of the Contract through the Engineer or the Engineer’s designee. All communications with the Port or its consultants related to the Contract will be through the designated representative.

B. Port not responsible for means and methods. The Port is not responsible for, and will have no control or charge of, the means, methods, techniques, sequences, or procedures of construction, or for safety precautions or programs incidental thereto, because these are the sole responsibility of the Contractor. If the Port makes any suggestion of means, methods, techniques, sequences, or procedures, the Contractor will exercise its independent judgment in deciding whether to adopt the suggestion, except as otherwise provided in the Contract Documents.

C. Port not responsible for acts or omissions of Contractor or Subcontractors. The Port is not responsible for, and will have no control or charge of, the acts or omissions of the Contractor, Subcontractors of any tier, suppliers, or any of their agents or employees, or any other persons performing a portion of the Work.

D. Port not responsible for the Work. The Port is not responsible for the Contractor’s failure to carry out the Work in accordance with the Contract Documents. The presence of the Engineer or others at the Project site at any time does not relieve the Contractor from its responsibility for non-conforming Work.

E. Port will have access to the Work. The Port and its representatives will at all times have access to the Work in progress, and the Contractor will provide proper facilities for such access and for inspection.
2.03 INFORMATION PROVIDED BY THE PORT

A. Port to furnish information with reasonable promptness. The Port shall furnish information and services required of the Port by the Contract Documents with reasonable promptness.

B. Subsurface investigation. The Port may have undertaken a limited investigation of the soil and other subsurface conditions at the Project site for design purposes only. The results of these investigations will be available for the convenience of the Contractor, but they are not Contract Documents. There is no warranty or guarantee, express or implied, that the conditions indicated are representative of those existing at the site or that unforeseen developments may not occur. The Contractor is solely responsible for interpreting the information.

2.04 CONTRACTOR REVIEW OF PROJECT INFORMATION

A. Contractor to familiarize itself with site and conditions of Work. Prior to executing the Contract, the Contractor shall visit the site, become generally familiar with local conditions under which the Work is to be performed, and correlate personal observations with the requirements of the Contract Documents. By signing the Contract, the Contractor confirms that the Contract Sum is reasonable compensation for the Work; that the Contract Time is adequate; that it has carefully examined the Contract Documents and the Project site; and that it has satisfied itself as to the nature, location, and character of the Work, the labor, materials, equipment, and other items required and all other requirements of the Contract Documents. The Contractor’s failure fully to acquaint itself with any such condition does not relieve the Contractor from the responsibility for performing the Work in accordance with the Contract Documents, within the Contract Time, and for the Contract Sum.

B. Contractor to review Contract Documents. Because the Contract Documents are complementary, the Contractor will, before starting each portion of the Work, carefully study and compare the various Drawings, Specifications, and other Contract Documents, as well as all information furnished by the Port.

C. Contractor to confirm field conditions. Before starting each portion of the Work, the Contractor shall take field measurements and verify any existing conditions, including all Work in place, and all general reference points; shall observe any conditions at the site affecting the Contractor; and shall carefully compare field measurements, conditions, and other information known to the Contractor with the Contract Documents.

2.05 PORT’S RIGHT TO REJECT, STOP AND/OR CARRY-OUT THE WORK

A. Port may reject Work. The Port has the authority but not the obligation to reject work, materials and equipment that is defective or that otherwise does not conform to the Contract Documents, and to decide questions concerning the Contract Documents. However, the failure to so reject, or the presence of the Port at the site, shall not be construed as assurance that the Work is acceptable or being completed in compliance with the Contract Documents.

B. Port may stop Work. If the Contractor fails to correct Work that does not comply with the requirements of the Contract Documents, or repeatedly or materially fails to properly carry out the Work, the Port may issue an order to stop all or a portion of the Work until the cause for the order has been eliminated. The Port’s right to stop the Work shall not impose a duty on the Port to exercise this right for the benefit of the Contractor or any third party.

C. Port may carry-out Work. If the Contractor fails to perform the Work properly, fails to perform any provision of this Contract, or fails to maintain the Progress Schedule, or if the Port reasonably concludes that the Work will not be completed in the specified manner or within the Contract Time, then the Port may, after three (3) days’ written notice to the Contractor and
without prejudice to any other remedy the Port may have, perform itself or have performed any or all of the Work and may deduct the cost thereof from any payment then or later due the Contractor.

2.06 SEPARATE CONTRACTORS

A. Port may engage separate contractors or perform work with its own forces. The Port may contract with other contractors (“Separate Contractor”) in connection with the Project or perform work with its own forces. The Contractor shall coordinate and cooperate with any Port forces or Separate Contractors, as applicable. The Contractor shall provide reasonable opportunity for the introduction and storage of materials and the execution of work by others.

B. Contractor to inspect work of others. If any part of the Contractor’s Work depends on the work of the Port or any Separate Contractor, the Contractor shall inspect and promptly report to the Port, in writing, any defects that impact the Contractor. Failure of the Contractor to so inspect and report defects in writing shall constitute an acceptance by Contractor of the work of the Port or Separate Contractor.

C. Contractor to resolve claims of others. Should the Contractor or any of its Subcontractors of any tier cause damage of any kind, including but not limited to, delay to any Separate Contractor, the Contractor shall promptly, and using its best efforts, settle or otherwise resolve the dispute with the Separate Contractor. The Contractor shall also promptly remedy damage caused to completed or partially completed construction.

2.07 OFFICERS AND EMPLOYEES OF THE PORT

A. No personal liability. Officers, employees, and representatives of the Port, including the Commissioners, acting within the scope of their employment, shall not be personally liable to Contractor for any acts or omissions arising out of the Project.

ARTICLE 3 - CONTRACTOR’S RESPONSIBILITIES

3.01 DUTY TO PERFORM THE ENTIRE WORK

A. Contractor must perform entire Work in accordance with Contract Documents. The Contractor shall perform the entire Work required by the Contract in accordance with the Contract Documents. Unless otherwise specifically provided, the Contractor shall provide and pay for all labor, tools, equipment, materials, electricity, power, water, other utilities, transportation, and other facilities necessary for the execution and completion of the Work.

B. Contractor shall be independent contractor. The Contractor shall be and operate as an independent contractor in the performance of the Work. The Contractor is not authorized to enter into any agreements or undertakings for or on behalf of the Port and is not an agent or employee of the Port.

3.02 OBSERVED ERRORS, INCONSISTENCIES, OMISSIONS OR VARIANCES IN THE CONTRACT DOCUMENTS

A. Contractor to notify Port of any discrepancy. The Contractor's obligations to review and carefully study the Contract Documents and field conditions are for the purpose of facilitating coordination and construction. If the Contractor at any time observes that the Contract Documents, including Drawings and Specifications, vary from the conditions of the Project site, are in error, or omit any necessary detail, the Contractor shall promptly notify the Engineer in writing through a Request for Information. Any Work done after such observation, until authorized by the Engineer, shall be at Contractor’s risk. The Contractor shall also promptly report to the Engineer any observed error, inconsistency, omission, or variance with applicable laws through a Request for Information. If the Contractor fails either to carefully study and
compare the Contract Documents, or to promptly report any observed error, inconsistency, omission, or variance, the Contractor shall assume full responsibility and shall bear all costs, liabilities, and damages attributable to the error, inconsistency, omission, or variance.

B. Requests for Information. The Contractor shall submit Requests for Information concerning the Contract Documents by following the procedure and using such form as the Port may require. The Contractor shall minimize Requests for Information by thoroughly studying the Contract Documents and reviewing all Subcontractor requests. The Contractor shall allow adequate time in its planning and scheduling for a response from the Port to a Request for Information.

C. Port may provide information to supplement Drawings and Specifications. Minor items of work or detail that are omitted from the Drawings and Specifications, but inferable from the information presented and normally provided by accepted good practice, shall be provided and/or performed by the Contractor as part of the Contract Sum and within the Contract Time. Similarly, the Engineer may furnish to the Contractor additional Drawings and clarifications, consistent with the Contract Documents, as necessary to detail and illustrate the Work. The Contractor shall conform its Work to such additional Drawings and clarifications at no increase in the Contract Sum or Contract Time.

3.03 SUPERVISION AND RESPONSIBILITY FOR SUBCONTRACTORS

A. Contractor responsible for Work and workers. The Contractor shall have complete control of the means, methods, techniques, sequences, or procedures related to the Work, and for all safety precautions or programs. The Contractor shall have complete control over and responsibility for all personnel performing the Work. The Contractor is also responsible for the acts and omissions of the Contractor's principals, employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors of any tier.

B. Contractor to supervise the Work. The Contractor shall continuously supervise and direct the Work using competent and skilled personnel and the Contractor's best skill and attention.

C. Contractor to enforce discipline and good order. The Contractor shall enforce strict discipline and good order among all workers on the Project, and shall not employ any unfit person or anyone not skilled in the work to which they are assigned. Incompetent, careless, or negligent workers shall immediately be removed from the Work. The Port may, but is not obligated to, require the Contractor to remove from the Work, at no change in the Contract Sum or Contract Time, anyone whom the Port considers objectionable.

3.04 MATERIALS AND EQUIPMENT

A. Material and equipment to be new. All materials and equipment to be incorporated into the Work shall be new unless specifically provided otherwise in the Contract Documents. The Contractor shall, if required in writing by the Port, furnish satisfactory evidence regarding the kind and quality of any materials, identify the source, and warrant compliance with the Contract Documents. The Contractor shall ensure that all materials and equipment are protected, kept dry and stored under cover in a manner to protect such materials and equipment.

B. Material and equipment shall conform to manufacturer instructions. All materials and equipment shall conform, and shall be applied, installed, used, maintained and conditioned in accordance with, the instructions of the applicable manufacturer, fabricator or processor, unless otherwise specifically provided by the Engineer.
3.05 CONTRACTOR WARRANTIES

A. Work will be of good quality and performed in workmanlike manner. In addition to any specific warranties set forth in the Contract Documents, the Contractor warrants that the Work, including all materials and equipment furnished under the Contract, will be of good quality and new, will be performed in a skillful and workmanlike manner, and will conform to the requirements of the Contract Documents. Any Work not conforming to this warranty, including unapproved or unauthorized substitutions, shall be considered defective.

B. Work will be free from defects. The Contractor warrants that the Work will be free from defects for a period of one (1) year from the date of Substantial Completion of the Project.

C. Contractor to collect and deliver warranties to Port. The Contractor shall collect and deliver to the Port any written warranties required by the Contract Documents. These warranties shall be obtained and enforced by the Contractor for the benefit of the Port without the necessity of separate assignment. These warranties shall extend to the Port all rights, claims, benefits, and interests that the Contractor may have under express or implied warranties or guarantees against a Subcontractor of any tier, supplier, or manufacturer for defective or non-conforming Work. Warranty provisions that purport to limit or alter the Port’s rights under the Contract Documents or the laws of the State of Washington are null and void.

D. General requirements. The Contractor is not relieved of its general warranty obligations by the specification of a particular product or procedure in the Contract Documents. Warranties in the Contract Documents shall survive completion, acceptance, and final payment.

3.06 REQUIRED WAGES

A. Contractor will pay required wages. The Contractor shall pay (and shall ensure that all Subcontractors of any tier pay) all prevailing wages and other wages (such as Davis-Bacon Act wages) applicable to the Project. See Specification Section 00 73 46.

B. The Contractor shall defend (at Contractor’s sole cost, with legal counsel approved by Port), indemnify, and hold the Port harmless from all liabilities, obligations, claims, demands, damages, disbursements, lawsuits, losses, fines, penalties, costs, and expenses, whether direct or indirect, and including, but not limited to, attorneys’ fees and consultants’ fees and other costs and expenses of litigation, from any violation or alleged violation by the Contractor or any Subcontractor of any tier of RCW 39.12 (“Prevailing Wages on Public Works”) or Chapter 51 RCW (“Industrial Insurance”).

3.07 STATE AND LOCAL TAXES

A. Contractor will pay taxes on consumables. The Contractor will pay the retail sales tax on all consumables used during performance of the Work and on all items that are not incorporated into the final Work; this tax shall be included in the Contract Sum.

B. Port will pay taxes on the Contract Sum. The Port will pay state and local retail sales tax on the Contract Sum with each progress payment, and on final payment, for transmittal by the Contractor to the Washington State Department of Revenue or to the applicable local taxing authority. Rule 170: WAC 458-20-170.

C. Direct all tax questions to the Department of Revenue. The Contractor should direct all questions concerning taxes on any portion of the Work to the State of Washington Department of Revenue or to the local taxing authority.

D. State Sales Tax - Rule 171: WAC 458-20-171. For work performed related to building, repairing, or improving streets, roads, etc., which are owned by a municipal corporation, or
political subdivision of the state, or by the United States, and which are used, primarily, for foot or vehicular traffic, the Contractor shall include Washington State Retail Sales Taxes in the various schedule prices, or other contract amounts, including those that the Contractor pays on the purchase of materials, equipment, or supplies used or consumed in doing the Work.

1. The bid form will indicate which bid items are subject to Rule 171. Any such identification by the Port is not binding upon the Department of Revenue.

3.08 PERMITS, LICENSES, FEES, AND ROYALTIES

A. Contractor to provide and pay for permits unless otherwise specified. Unless otherwise specified, the Contractor shall procure and pay for all permits, licenses, and governmental inspection fees necessary or incidental to the performance of the Work. All costs related to these permits, licenses, and inspections shall be included in the Contract Sum. Any action taken by the Port to assist the Contractor in obtaining permits or licenses shall not relieve the Contractor of its sole responsibility to obtain and pay for permits, licenses, and inspections as part of the Contract Sum.

B. Contractor’s obligations when permit must be in Port’s name. When applicable law or agency requires a permit to be issued to a public agency, the Port will support the Contractor’s request for the permit and accept the permit in the Port’s name, if:

1. The Contractor takes all necessary steps required for the permit to be issued;
2. The permit applies to Work performed in connection with the Project; and
3. The Contractor agrees in writing to abide by all requirements of the permit and to defend and hold harmless the Port from any liability in connection with the permit.

C. Contractor to pay royalties. The Contractor shall pay all royalties and license fees required for the Work unless otherwise specified in the Contract Documents.

3.09 SAFETY

A. Contractor solely responsible for safety. The Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work and the performance of the Contract.

B. Port not responsible for safety. The Port may identify safety concerns to the Contractor. However, no action or inaction of the Port or any third party relating to safety will: (1) relieve the Contractor of its sole and complete responsibility for safety and sole liability for any consequences; (2) impose any obligation on the Port or a third party to inspect or review the Contractor’s safety program or precautions; (3) impose any continuing obligation on the Port or a third party to ensure the Contractor performs the Work safely; or (4) affect the Contractor’s responsibility for the protection of property, workers, and the general public.

C. Contractor to maintain a safe Work site. The Project site may be occupied during performance of the Work. The safety of these site occupants is of paramount importance to the Port. The Contractor shall maintain the Work site and perform the Work in a safe manner and in accordance with the Washington Industrial Safety and Health Act (WISHA) and all other applicable safety laws, rules, and regulations. This requirement shall apply continuously and not be limited to working hours.

D. Contractor to protect Work site and adjacent property until Final Completion. The Contractor shall continuously protect the Work and adjacent property from damage. At all times until Final Completion, the Contractor shall be responsible for and protect from damage, weather, deterioration, theft, and vandalism the Work and all materials, equipment, tools, and other
items incorporated or to be incorporated in the Work, and shall repair any damage, injury, or loss.

3.10 CORRECTION OF WORK

A. Contractor to correct defective Work. The Contractor shall, at no cost to the Port, promptly correct Work that is defective or that otherwise fails to conform to the requirements of the Contract Documents. Such Work shall be corrected, whether before or after Substantial Completion, and even if it was previously inspected or observed by the Port.

B. One-year correction period. The Contractor shall correct all defects in the Work appearing within one (1) year of Substantial Completion, or within any longer period prescribed by law, or by the Contract Documents. The Contractor shall initiate remedial action within fourteen (14) days of receipt of notice from the Port and shall complete remedial work within a reasonable time. Work corrected by the Contractor shall be subject to the provisions of this Section 3.10 for an additional one-year period following the Port’s acceptance of the corrected Work.

C. Contractor responsible for defects and failures to correct. The Contractor shall be responsible for any expenses incurred by the Port resulting from defects in the Work. If the Contractor refuses or neglects to correct the defects, or does not timely accomplish corrections, the Port may correct the Work and charge the Contractor the cost of the corrections. If damage or loss of service may result from a delay in correction, the corrections may be made by the Port and reimbursed by the Contractor.

D. Port may accept defective work. The Port may, at its sole option, elect to retain defective or nonconforming Work. In such a case, the Port shall reduce the Contract Sum by a reasonable amount to account for the defect or non-conformance.

E. No period of limitation established. Nothing contained in this Section 3.10 establishes a period of limitation with respect to any obligations under the Contract Documents or law. The establishment of the one (1) year correction period relates only to the specific obligation of the Contractor to correct defective or non-conforming Work.

3.11 UNCOVERING OF WORK

A. Contractor to uncover work covered prior to inspection. If any portion of the Work is covered prior to inspection and approval, the Contractor shall, at its expense, uncover or remove the Work for inspection by the Port or others, and replace the Work to the standard required by the Contract Documents.

B. Contractor to uncover work at Port’s request. After initial inspection and observation, the Port may order a reexamination of Work, and the Work must be uncovered by the Contractor. If the uncovered Work complies with the Contract Documents, the Port shall pay the cost of reexamination and replacement. If the Work is found not to comply with the Contract Documents, the Contractor shall pay the cost of replacement, unless the Contractor demonstrates that it did not cause the defect in the Work.

3.12 RELOCATION OF UTILITIES

A. Contractor should assume underground utilities are in approximate locations. The Contractor should assume that the locations of any underground or hidden utilities, underground tanks, and plumbing or electrical runs indicated in surveys or the Contract Documents are shown in approximate locations. The accuracy of this information is not guaranteed by the Port and shall be verified by the Contractor. The Contractor shall comply with RCW 19.122.030 and utilize a utility locator service to locate utilities on Port property. The Contractor shall bear the risk of
loss if any of its Work directly or indirectly damages or interrupts any utility service or causes or contributes to damages of any nature.

B. Utility relocation or removal. Where relocation or removal of utilities is necessary or required, it shall be performed at the Contractor’s sole expense, unless the Contract Documents specify otherwise. If a utility owner is identified as being responsible for relocating or removing utilities, the work will be accomplished at the utility owner’s convenience, either during or in advance of construction. Unless otherwise specified, it shall be the Contractor’s sole responsibility to coordinate, schedule, and pay for work performed by a utility owner.

C. Contractor to notify Port of unknown utilities. If the Contractor discovers the presence of any unknown utilities, it shall immediately notify the Engineer in writing.

3.13 LABOR

A. Contractor responsible for labor peace. The Contractor is responsible for labor peace relating to the Work and shall cooperate in maintaining Project-wide labor harmony. The Contractor shall use its best efforts as an experienced contractor to adopt and implement policies and practices designed to avoid work stoppages, slowdowns, disputes, or strikes.

B. Contractor to minimize impact of labor disputes. The Contractor will take all necessary steps to prevent labor disputes from disrupting, or otherwise interfering with, access to Port property. If a labor dispute disrupts the progress of the Work or interferes with access, the Contractor shall promptly and expeditiously take all necessary action to eliminate or minimize the disruption or interference.

3.14 INDEMNIFICATION

A. Duty to defend, indemnify, and hold harmless. To the fullest extent permitted by law and subject to this Section 3.14, the Contractor shall defend (at the Contractor’s sole cost, with legal counsel approved by Port), indemnify, and hold harmless the Port, including its Commission, officers, managers, employees (including the Engineer), any consultants, and the agents and employees, successors and assigns of any of them (the “Indemnified Parties”) from and against claims, damages, lawsuits, losses (including loss of use), disbursements, liabilities, obligations, fines, penalties, costs, and expenses, whether direct and indirect or consequential, including but not limited to, consultants’ fees and attorneys’ fees incurred on such claims and in proving the right to indemnification (“Claims”), arising out of, or resulting from, the acts or omissions of the Contractor, a Subcontractor of any tier, their agents, and anyone directly or indirectly employed by any of them, or anyone for whose acts they may be liable (individually and collectively, the “Indemnitor”).

B. Duty to defend, indemnify, and hold harmless for sole negligence. The Contractor will fully defend, indemnify, and hold harmless the Indemnified Parties for the sole negligence or willful misconduct of the Indemnitor.

C. Duty to defend, indemnify, and hold harmless for concurrent negligence. Where Claims arise from the concurrent negligence of: (1) the Port, and (2) the Indemnitor, the Contractor's obligations to indemnify and defend the Indemnified Parties under this Section 3.14 shall be effective only to the extent of the Indemnitor's negligence.

D. Duty to indemnify not limited by workers’ compensation or similar employee benefit acts. In claims against any of the Indemnified Parties by an employee of the Contractor, a Subcontractor of any tier, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable, the indemnification obligation under this Section 3.14 shall not be limited by a limitation on amount or type of damages, compensation, or benefits payable under workers’ compensation acts, disability benefit acts, or other employee benefit acts.
mutual negotiation of the parties, the Contractor waives immunity as to the Indemnified Parties under Title 51 RCW, “Industrial Insurance.”

E. Intellectual property indemnification. The Contractor will be liable for and shall defend (at the Contractor’s sole cost, with legal counsel approved by Port) indemnify, and hold the Indemnified Parties harmless for Claims for infringement by the Contractor of copyrights or patent rights arising out of or relating to the Project.

F. Labor peace indemnification. If the Contractor fails to satisfy its labor peace obligations under the Contract, the Contractor will be liable for and shall defend (at the Contractor’s sole cost, with legal counsel approved by Port), indemnify, and hold harmless the Indemnified Parties for Claims brought against the Port by third parties, including but not limited to, lessees, tenants, contractors, customers, licensees, and invitees of the Port, for injunctive relief or monetary loss.

G. Joinder. The Contractor agrees to being added by the Port as a party to any arbitration or litigation with third parties in which the Port alleges indemnification or seeks contribution from the Indemnitor. The Contractor shall cause each of its Subcontractors of any tier to similarly stipulate in their subcontracts; in the event any does not, the Contractor shall be liable in place of such Subcontractor(s) of any tier.

H. Other. To the extent that any portion of this Section 3.14 is stricken by a court or arbitrator for any reason, all remaining provisions shall retain their vitality and effect. The obligations of the Contractor under this Section 3.14 shall not be construed to negate, abridge, or otherwise reduce any other right or obligations of indemnity which would otherwise exist. To the extent the wording of this Section 3.14 would reduce or eliminate an available insurance coverage, it shall be considered modified to the extent necessary so that the insurance coverage is not affected. This Section 3.14 shall survive completion, acceptance, final payment, and termination of the Contract.

3.15 WAIVER OF CONSEQUENTIAL DAMAGES

A. Mutual waiver of consequential damages. The Contractor and Port waive claims against each other for consequential damages arising out of or relating to this Contract. This mutual waiver includes, but is not limited to: (1) damages incurred by the Port for rental expenses, financing, business, and reputation, and for loss of management or employee productivity or of the services of such persons; and (2) damages incurred by the Contractor for principal and home office overhead and expenses including, but not limited to, the compensation of personnel stationed there, for losses of financing, business, and reputation, for losses on other projects, for loss of profit, and for interest or financing costs. This mutual waiver includes, but is not limited to, all consequential damages due to either party’s termination.

B. Limitation. Nothing contained in this Section 3.15, however, shall be deemed to preclude an award of liquidated damages, when applicable, in accordance with the requirements of the Contract Documents, to preclude damages specified in the Agreement or to affect the Contractor’s obligation to indemnify the Port for direct, indirect, or consequential damages alleged by a third party.

ARTICLE 4 - SUBCONTRACTORS AND SUPPLIERS

4.01 RESPONSIBILITY FOR ACTIONS OF SUBCONTRACTORS AND SUPPLIERS.

A. Contractor responsible for Subcontractors. The Contractor is fully responsible to the Port for the acts and omissions of its Subcontractors of any tier and all persons either directly or indirectly employed by the Contractor or its Subcontractors.
4.02 AWARD OF CONTRACTS TO SUBCONTRACTORS AND SUPPLIERS

A. Contractor to provide proposed Subcontractor information. The Contractor, within ten (10) days after the Port’s notice of award of the Contract, shall provide the Engineer with the names of the persons or entities proposed to perform each of the principal portions of the Work (i.e., either a Subcontractor listed in a bid or proposal or a Subcontractor performing Work valued at least ten percent (10%) of the Contract Sum), the proprietary names, and the suppliers of the principal items or systems of materials and equipment proposed for the Work. No progress payment will become due until after this information has been furnished.

B. Port to respond promptly with objections. The Port may respond promptly to the Contractor in writing stating (1) whether the Port has reasonable objection to any proposed person or entity or (2) whether the Port requires additional time for review. If the Port makes a reasonable objection, the Contractor shall replace the Subcontractor with no increase to the Contract Sum or Contract Time. Such a replacement shall not relieve the Contractor of its responsibility for the performance of the Work and compliance with all of the requirements of the Contract within the Contract Sum and Contract Time.

C. Reasonable objection defined. “Reasonable objection” as used in this Section 4.02 includes, but is not limited to: (1) a proposed Subcontractor of any tier different from the entity listed with the bid, (2) lack of “responsibility” of the proposed Subcontractor, as defined by Washington law and the Bidding Documents, or lack of qualification or responsibility of the proposed Subcontractor based on the Contract or Bidding Documents, or (3) failure of the Subcontractor to perform satisfactorily in the Port’s opinion (such as causing a material delay or submitting a claim that the Port considers inappropriate) on one or more projects for the Port within five (5) years of the bid date.

D. No substitution allowed without permission. The Contractor shall not substitute a Subcontractor, person, or organization without the Engineer’s written consent.

4.03 SUBCONTRACTOR AND SUPPLIER RELATIONS

A. Contractor to schedule, supervise, and coordinate Subcontractors. The Contractor shall schedule, supervise and coordinate the operations of all Subcontractors of any tier, including suppliers. The Contractor shall ensure that appropriate Subcontractors coordinate the Work of lower-tier Subcontractors.

B. Subcontractors to be bound to Contract Documents. By appropriate agreement, the Contractor shall require each Subcontractor and supplier to be bound to the terms of the Contract Documents and to assume toward the Contractor, to the extent of their Work, all of the obligations that the Contractor assumes toward the Port under the Contract Documents. Each subcontract shall preserve and protect the rights of the Port and shall allow to the Subcontractor, unless specifically provided in the subcontract, the benefit of all rights, remedies, and redress against the Contractor that the Contractor, by the Contract Documents, has against the Port. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with lower-tier Subcontractors.

C. Contractor to correct deficiencies in Subcontractor performance. When a portion of the Work subcontracted by the Contractor is not being prosecuted in accordance with the Contract Documents, or if such subcontracted Work is otherwise being performed in an unsatisfactory manner in the Port’s opinion, the Contractor shall, on its own initiative or upon the written request of the Port, take immediate steps to correct the deficiency or remove the non-performing party from the Project. The Contractor shall replace inadequately performing Subcontractors upon request of the Port at no change in the Contract Sum or Contract Time.
D. Contractor to provide subcontracts. Upon request, the Contractor will provide the Port copies of written agreements between the Contractor and any Subcontractor.

ARTICLE 5 - WORKFORCE AND NON-DISCRIMINATION REQUIREMENTS

5.01 COMPLIANCE WITH NON-DISCRIMINATION LAWS

A. Contractor to comply with non-discrimination laws. The Contractor shall fully comply with all applicable laws, regulations, and ordinances pertaining to non-discrimination.

5.02 SMALL BUSINESS ENTERPRISE PARTICIPATION.

A. Small business participation encouraged. The Port’s policy is to encourage the Contractor to solicit and document participation, and to provide and promote the maximum lawful, practicable opportunity for increased participation by small business enterprises.

ARTICLE 6 - CONTRACT TIME AND COMPLETION

6.01 CONTRACT TIME

A. Contract Time is measured from Contract execution. Unless otherwise provided in the Agreement, the Contract Time is the period of time, including authorized adjustments, specified in the Contract Documents from the date the Contract is executed to the date Substantial Completion of the Work is achieved.

B. Commencement of the Work. The Contractor shall begin Work in accordance with the notice of award and the notice to proceed and shall complete all Work within the Contract Time. When the Contractor’s signed Agreement, required insurance certificate with endorsements, bonds, and other submittals required by the notice of award have been accepted by the Port, the Port will execute the Contract and, following receipt of other required pre-work submittals, will issue a notice to proceed to allow the Contractor to mobilize and commence physical Work at the Project site, as further described in these contract documents. No Work at the Project site may commence until the Port issues a notice to proceed.

C. Contractor shall achieve specified completion dates. The Contractor shall achieve Substantial Completion within the Contract Time and shall achieve Final Completion within the time period thereafter stated in the Contract Documents.

D. Time is of the essence. Time limits stated in the Contract Documents, including any interim milestones, are of the essence of the Contract. By executing the Agreement, the Contractor confirms that the Contract Time is a reasonable period for performing the Work.

6.02 PROGRESS AND COMPLETION

A. Contractor to maintain schedule. The Contractor’s sequence and method of operations, application of effort, and work force shall at all times be created and implemented to ensure the orderly, expeditious, and timely completion of the Work and performance of the Contract. The Contractor shall furnish sufficient forces and shall work such hours, including extra shifts, overtime operations, and weekend and holiday work as may be necessary to ensure completion of the Work within the Contract Time and the approved Progress Schedule.

B. Contractor to take necessary steps to meet schedule. If the Contractor fails substantially to perform in a timely manner in accordance with the Contract Documents and, through the fault of the Contractor or Subcontractor(s) of any tier, fails to meet the Progress Schedule, the Contractor shall take such steps as may be necessary to immediately improve its progress by increasing the number of workers, shifts, overtime operations or days of work, or by other means and methods, all without additional cost to the Port. If the Contractor believes that any
action or inaction of the Port constitutes acceleration, the Contractor shall immediately notify
the Port in writing and shall not accelerate the Work until the Port either directs the acceleration
in writing or denies the constructive acceleration.

C. Liquidated damages not exclusive. Any provisions in the Contract Documents for liquidated
damages shall not preclude other damages due to breaches of Contract of the Contractor.

6.03 SUBSTANTIAL COMPLETION

A. Substantial Completion defined. Substantial Completion is the stage in the progress of the
Work, or portion or phase thereof, when the Work or designated portion is sufficiently complete
in accordance with the Contract Documents so that the Port can fully occupy or utilize the
Work, or the designated portion thereof, for its intended use, all requirements in the Contract
Documents for Substantial Completion have been achieved, and all required documentation
has been properly submitted to the Port in accordance with the Contract Documents. All Work
other than incidental corrective or punch list Work and final cleaning must be completed. The
fact that the Port may occupy the Work, or a designated portion thereof, does not indicate that
Substantial Completion has occurred or that the Work is acceptable in whole or in part.

B. Work not Substantially Complete unless Final Completion attainable. The Work is not
Substantially Complete unless the Port reasonably judges that the Work can achieve Final
Completion within the period of time specified in the Contract Documents.

C. Notice of Substantial Completion. When the Work or designated portion has achieved
Substantial Completion, the Port will provide a notice to establish the date of Substantial
Completion. The notice shall establish responsibilities of the Port and Contractor for security,
maintenance, heat, utilities, damage to the Work, and insurance, and shall fix the time within
which the Contractor shall finish all remaining Work. If the notice of Substantial Completion
does not so state, all responsibility for the foregoing items shall remain with the Contractor until
Final Completion.

6.04 COMPLETION OF PUNCH LIST

A. Contractor shall complete punch list items prior to Final Completion. The Contractor shall
cause punch list items to be completed prior to Final Completion. If, after Substantial
Completion, the Contractor does not expeditiously proceed to correct punch list items, or if the
Port considers that the punch list items are unlikely to be completed prior to the date
established for Final Completion (or such other period of time as is specified in the Contract
Documents), the Port may, upon seven (7) days' written notice to the Contractor, take over and
perform some or all of the punch list items. The Port may also take over and complete any
portion of the Work at any time following Substantial Completion and deduct the actual cost of
performing the Work (including direct and indirect costs) from the Contract Sum. The Port’s
rights under this Section 6.04 are not obligations and shall not relieve the Contractor of its
responsibilities under any other provisions of the Contract Documents.

6.05 FINAL COMPLETION

A. Final Completion. Upon receipt of written notice from the Contractor that all punch list items
and other Contract requirements are completed, the Contractor will notify the Port, and the Port
will perform a final inspection. If the Port determines that some or all of the punch list items
have not been addressed, the Contractor shall be responsible to the Port for all costs, including
re-inspection fees, for any subsequent reviews to determine completion of the punch list.
When the Port determines that all punch list items have been satisfactorily addressed, that the
Work is acceptable under the Contract Documents, and that the Work has fully been
performed, the Port will promptly notify the Contractor of Final Completion.
B. Contractor responsible for costs if Final Completion is not timely achieved. In addition to any liquidated damages, the Contractor is liable for, and the Port may deduct from any amounts due the Contractor, all costs incurred by the Port for services performed after the contractual date of Final Completion, whether or not those services would have been performed prior to that date had Final Completion been timely achieved.

C. Final Completion submittals. The Port is not obligated to accept the Project as complete until the Contractor has submitted all required submittals to the Port.

D. Contractor responsible for the Work until Final Completion. The Contractor shall assume the sole risk of loss and responsibility for all Work under the Contract, and all materials to be incorporated in the Work, whether in storage or at the Project site, until Final Completion. Damage from any cause to either permanent or temporary Work, utilities, materials, equipment, existing structures, the site, or other property owned by the Port or others, shall be repaired by the Contractor to the reasonable satisfaction of the Port at no change in the Contract Sum.

6.06 FINAL ACCEPTANCE

A. Final Acceptance. Final Acceptance is the formal action of the Port accepting the Project as complete. Public notification of Final Acceptance will be posted on the Port’s external website (<http://www.portoftacoma.com/final-acceptance>).

B. Final Acceptance not an acceptance of defective Work. Final Acceptance shall not constitute acceptance by the Port of unauthorized or defective Work, and the Port shall not be prevented from requiring the Contractor to remove, replace, repair, or dispose of unauthorized or defective Work, or recovering damages due to the same.

C. Completion of Work under RCW 60.28. Pursuant to RCW 60.28, “Lien for Labor, Materials, Taxes on Public Works,” completion of the Contract Work shall occur upon Final Acceptance.

6.07 PORT’S RIGHT TO USE THE PREMISES

A. Port has right to use and occupy Work. The Port reserves the right to occupy or use any part of the Work before or after Substantial Completion of some or all of the Work without relieving the Contractor of any of its obligations under the Contract. Such occupancy or use shall not constitute acceptance by the Port of any of the Work, and shall not cause any insurance to be canceled or lapse.

B. No compensation due if Port elects to use and occupy Work. No additional compensation shall be due to the Contractor as a result of the Port’s use or occupancy of the Work or a designated portion.

ARTICLE 7 - PAYMENT

7.01 ALL PAYMENTS SUBJECT TO APPLICABLE LAWS AND SCHEDULE OF VALUES

A. Payment of the Contract Sum. The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Port to the Contractor for performance of the Work under the Contract Documents. Payments made to the Contractor are subject to all laws applicable to the Port and the Contractor. Payment of the Contract Sum constitutes full compensation to the Contractor for performance of the Work, including all risk, loss, damages, or expense of whatever character arising out of the nature or prosecution of the Work. The Port is not obligated to pay for extra work or materials furnished without prior written approval of the Port.

B. Schedule of Values. All payments will be based upon an approved Schedule of Values. Prior to submitting its first Application for Payment, the Contractor shall submit a Schedule of Values

Project No. 201054.01 & 201055.01
Contract No. 070819
to the Port allocating the entire Contract Sum to the various portions of the Work. The Schedule of Values shall be prepared in such form, and supported by such data to substantiate its accuracy, as the Port may require. This schedule, unless objected to by the Port, shall be used as a basis for reviewing the Contractor's applications for payment.

7.02 APPLICATIONS FOR PAYMENT

A. Applications for Payment. Progress payments will be made monthly for Work duly certified, approved by the Engineer, and performed (based on the Schedule of Values and actual quantities of Work performed) during the calendar month preceding the Application for Payment. These amounts are paid in trust to the Contractor for distribution to Subcontractors, to the extent and in accordance, with the approved Application for Payment.

7.03 PROGRESS PAYMENTS

A. Progress payments. Following receipt of a complete Application for Payment, the Engineer will either authorize payment or indicate in writing to the Contractor the specific reasons why the payment request is being denied, in whole or in part, and the remedial action the Contractor must take to receive the withheld amount. After a complete Application for Payment has been received and approved by the Port, payment will be made within thirty (30) days. Any payments made by, or through, or following receipt of payment from third parties will be made in accordance with the third party's policies and procedures.

B. Port may withhold payment. The Port may withhold payment in whole or in part as provided in the Contract Documents, or to the extent reasonably necessary to protect the Port from loss or potential loss for which the Contractor is responsible, including loss resulting from the Contractor’s acts and omissions.

7.04 PAYMENT BY CONTRACTOR TO SUBCONTRACTORS

A. Payment to Subcontractors. With each Application for Payment, the Contractor shall provide a list of Subcontractors to be paid by the Contractor. No payment request shall include amounts the Contractor does not intend to pay to a Subcontractor because of a dispute or other reason. If, however, after submitting an Application for Payment, but before paying a Subcontractor, the Contractor discovers that part or all of a payment otherwise due to the Subcontractor is subject to withholding from the Subcontractor under the subcontract (such as for unsatisfactory performance or non-payment of lower-tier Subcontractors), the Contractor may withhold the amount as allowed under the subcontract, but it shall give the Subcontractor and the Port written notice of the remedial actions that must be taken and pay the Subcontractor within eight (8) working days after the Subcontractor satisfactorily completes the remedial action identified in the notice.

B. Payment certification to be provided upon request. The Contractor shall provide with each Application for Payment a certification signed by Contractor attesting that all payments by the Contractor to Subcontractors from the last Application for Payment were made within ten (10) days of the Contractor’s receipt of payment. The certification will also attest that the Contractor will make payment to Subcontractors for the current Application for Payment within ten (10) days of receipt of payment from the Port.

7.05 FINAL PAYMENT

A. Final payment. Final applications for payment are due within seven (7) days following Final Completion. Final payment of the unpaid balance of the Contract Sum, except retainage, will be made following Final Completion and within thirty (30) days of the Contractor’s submission of an approved final Application for Payment.
B. Releases required for final payment. The final payment shall not become due until the Contractor delivers to the Port a complete release of all liens arising out of the Contract, as well as an affidavit stating that, to the best of Contractor’s knowledge, its release includes all labor and materials for which a lien could be filed. If a Subcontractor of any tier refuses to furnish a release or waiver required by the Port, the Port may: (a) retain in the fund, account, or escrow funds in such amount as to defray the cost of foreclosing the liens of such claims and to pay attorneys’ fees, the total of which shall be no less than 150% of the claimed amount, or (b) accept a bond from the Contractor, satisfactory to the Port, to indemnify the Port against the lien. If any such lien remains unsatisfied after all payments from the retainage are made, the Contractor shall refund to the Port all moneys that the Port may be compelled to pay in discharging such lien, including all costs and reasonable attorneys’ fees.

C. Contractor to hold Port harmless from liens. The Contractor shall defend (at the Contractor’s sole cost, with legal counsel approved by Port), indemnify, and hold harmless the Port from any liens, claims, demands, lawsuits, losses, damages, disbursements, liabilities, obligations, fines, penalties, costs, and expenses, whether direct, indirect, including but not limited to, attorneys’ fees and consultants’ fees and other costs and expenses, except to the extent a lien has been filed because of the failure of the Port to make a contractually required payment.

7.06 RETAINAGE

A. Retainage to be withheld. In accordance with RCW 60.28, a sum equal to five percent (5%) of each approved Application for Payment shall be retained. Prior to submitting its first Application for Payment, the Contractor shall exercise one of the options listed below:

1. Retained percentages will be retained by the Port in a fund; or
2. Deposited by the Port in an interest-bearing account in a bank, mutual savings bank, or savings and loan association; or
3. Placed in escrow with a bank or trust company; or
4. If the Contractor provides a bond in place of retainage, it shall be in an amount equal to 5% of the Contract Sum plus Change Orders. The retainage bond shall be based on the form furnished in Section 00 61 23, or otherwise acceptable to the Port, and duly completed and signed by a licensed surety or sureties registered with the Washington State Insurance Commissioner and on the currently authorized insurance list published by the Washington State Insurance Commissioner. The surety or sureties must be rated at least A minus, FSC(6), or higher by A.M. Best Rating Guide and be authorized by the Federal Department of the Treasury. Attorneys-in-fact who sign the retainage bond must file with each bond a certified and effective Power of Attorney statement.

B. Contractor may withhold retainage from Subcontractors. The Contractor or a Subcontractor may withhold not more than five percent (5%) retainage from the monies earned by any Subcontractor or lower-tier Subcontractor, provided that the Contractor pays interest to the Subcontractor at the same interest rate it receives from its reserved funds. If requested by the Port, the Contractor shall specify the amount of retainage and interest due a Subcontractor.

C. Release of retainage. Retainage will be withheld and applied by the Port in a manner required by RCW 60.28 and released in accordance with the Contract Documents and statutory requirements. Release of the retainage will be processed in the ordinary course of business within sixty (60) days following Final Acceptance of the Work by the Port provided that no notice of lien has been given as provided in RCW 60.28, that no claims have been brought to the attention of the Port, that the Port has no claims under this Contract, and that release of retention has been duly authorized by the State. The following items must also be obtained...
prior to release of retainage: pursuant to RCW 60.28, a certificate from the Department of Revenue; pursuant to RCW 50.24, a certificate from the Department of Employment Security; and appropriate information from the Department of Labor and Industries including approved affidavits of wages paid for the Contractor and each subcontractor.

7.07 DISPUTED AMOUNTS

A. Disputed amounts. If the Contractor believes it is entitled to payment for Work performed during the prior calendar month in addition to the agreed-upon amount, the Contractor may submit to the Port along with the approved Application for Payment, a separate written payment request specifying the exact additional amount claimed to be due, the category in the Schedule of Values to which the payment would apply, the specific Work for which additional payment is sought, and an explanation of why the Contractor believes additional payment is due.

7.08 EFFECT OF PAYMENT

A. Payment does not relieve Contractor of obligations. Payment to the Contractor of progress payments or final payment does not relieve the Contractor from its responsibility for the Work or its responsibility to repair, replace, or otherwise make good defective Work, materials, or equipment. Likewise, the making of a payment does not constitute a waiver of the Port’s right to reject defective or non-conforming Work, materials, or equipment (even though they are covered by the payment), nor is it a waiver of any other rights of the Port.

B. Acceptance of final payment waives claims. Acceptance of final payment by the Contractor, a Subcontractor of any tier, or a supplier shall constitute a waiver of claims, except those previously made in writing and identified as unsettled in Contractor’s final Application for Payment.

C. Execution of Change Order waives claims. The execution of a Change Order shall constitute a waiver of claims by the Contractor arising out of the Work to be performed or deleted pursuant to the Change Order, except as specifically described in the Change Order.

7.09 LIENS

A. Contractor to discharge liens. The Contractor shall promptly pay (and secure the discharge of any liens asserted by) all persons properly furnishing labor, equipment, materials, or other items in connection with the performance of the Work (including, but not limited to, any Subcontractors of any tier).

ARTICLE 8 - CHANGES IN THE WORK

8.01 CHANGES IN THE WORK

A. Changes in the Work authorized. Without invalidating the Contract and without notice to the Contractor’s surety, the Port may authorize changes in the Work after execution of the Contract, including changes in the Contract Sum or Contract Time. Changes shall occur solely by Change Order, Unilateral Change Directive, or Minor Change in Work. All changes in the Work are effective immediately, and the Contractor shall proceed promptly to perform the change, unless otherwise provided in the Change Order or Directive.

B. Changes in the Work Defined.

1. A Change Order is a written instrument signed by the Port and Contractor stating their agreement to a change in the Work and the adjustment, if any, in the Contract Sum and/or Contract Time.

2. A Unilateral Change Directive is a written instrument issued by the Port to transmit new or revised Drawings, issue additions or modifications to the Contract, furnish other direction
and documents adjustment, if any, to the Contract Sum and/or Contract Time. A Unilateral Change Directive is signed only by the Port, without requiring the consent or signature of the Contractor.

3. A Minor Change in the Work is a written order from the Port directing a change that does not involve an adjustment to the Contract Sum or the Contract Time.

C. Request for Proposal: At any time, the Port may issue a Proposal Request directing the Contractor to propose a change to the Contract Sum and/or Contract Time, if any, based on a proposed change in the Work. The Contractor shall submit a responsive Change Order proposal as soon as possible, and no later than fourteen (14) days after receipt, in which the Contractor specifies, in good faith, the extent to which the Contract Sum and/or Contract Time would change. All cost components shall be limited to the manner described in Section 8.02(B). If the Contractor fails to timely respond to a Proposal Request, the Port may issue the change as a Unilateral Change Directive.

1. Fixed price method is default for Contractor Change Order proposal. When the Port has requested that the Contractor submit a Change Order proposal, the Port may specify the basis on which the Contract Sum will be adjusted by the Contractor. The Engineer’s preference, unless otherwise indicated, is for changes in the Work to be priced using Lump Sums or Unit Prices, or on a time and material (Force Account) basis if unit pricing or lump sums cannot be negotiated or determined. In all instances, however, proposed changes shall include a not-to-exceed price for the change and shall be itemized for evaluation purposes in accordance with Section 8.02(B), as requested by the Engineer.

2. The Port may accept or reject the Contractor’s Change Order proposal, request further documentation, or negotiate acceptable terms with the Contractor. If The Port and Contractor reach agreement on the terms of any change in the Work, including any adjustment in the Contract Sum or Contract Time, such agreement shall be incorporated in a Change Order.

3. The Change Order shall constitute full payment and final settlement of all claims for time and for direct, indirect, and consequential costs, including costs of delays, inconvenience, disruption of schedule, or loss of efficiency or productivity, related to any Work either covered or affected by the Change Order, or related to the events giving rise to the request for equitable adjustment. The Port may reject a proposal, in which case the Port may either not effectuate the change or issue a Unilateral Change Directive. The Port will not make payment to the Contractor for any work until that work has been incorporated into an executed Change Order.

D. Unforeseen Conditions: If the Contractor encounters conditions at the site that are: (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or any soils reports made available by the Port to the Contractor, or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall immediately provide oral notice to the Engineer before conditions are disturbed, followed within 24 hours by an initial written notice. The Contractor shall submit a detailed proposal no later than seven (7) days following discovery of differing site conditions. The Engineer will promptly investigate these conditions, and if the Engineer determines that they differ materially and cause an increase or decrease in the Contractor’s cost or time required for performance of any part of the Work, will establish a change in the Contract Sum or Contract Time, or both, consistent with the requirements of the Contract Documents. If the Contractor disputes the Engineer’s determination, the Contractor may proceed as provided in the dispute resolution procedure.
(Article 11). No increase to the Contract Sum or the Contract Time shall be allowed if the Contractor does not comply with the contractual requirements or if the Contractor knew, or reasonably should have known, of the concealed conditions prior to executing the Contract.

E. Proceed Immediately: Pending agreement on the terms of the Change Order, or upon determination of a differing site condition as defined in 8.01(D), the Engineer may direct Contractor to proceed immediately with the change in the Work. Contractor shall not proceed with any change in the Work until it has obtained the Engineer’s written approval and documentation of the following:

1. The scope of work
2. An agreed upon maximum not-to-exceed amount
3. The method of final cost determination
4. Estimated time to complete the changed work
5. As a change in the Work is performed, unless the parties have signed a written Change Order to establish the cost of the change, the Contractor shall maintain an itemized accounting of all costs related to the change based on the categories in Section 8.02(B) and provide such data to the Port upon request. This includes, without limitation, invoices, including freight and express bills, and other support for all material, equipment, Subcontractor, and other charges related to the change and, for material furnished from the Contractor’s own inventory, a sworn affidavit certifying the actual cost of such material. Failure to provide data to the Port within seven (7) days of a request constitutes a waiver of any claim. The Port may furnish any material or equipment to the Contractor that it deems advisable, and the Contractor shall have no claim for any costs or fee on such material or equipment.

F. Procedure for Unilateral Change Directive. Whether or not the Port has rejected a Contractor’s proposal, the Port may issue a Unilateral Change Directive and the Contractor shall promptly proceed with the specified Work. If the Contractor disagrees with a Unilateral Change Directive, the Contractor shall advise the Port in writing through a Change Order proposal within seven (7) days of receipt. The Contractor’s Change Order proposal shall reasonably specify the reasons for any disagreement and the adjustment it proposes. Without this timely Change Order proposal, the Contractor shall conclusively be deemed to have accepted the Port’s proposal.

G. Payment pending final determination of Force Account work. Pending final determination of the total cost of Force Account Work, and provided that the Work to be performed under Force Account is complete and any reservations of rights have been signed by the Port, the Contractor may request payment for amounts not in dispute in the next Application for Payment accompanied by documentation indicating the parties’ agreement. Work done on a Force Account basis must be approved in writing on a daily basis by the Engineer or the Engineer’s designee and invoices shall be submitted with an Application for Payment within sixty (60) days of performance of the Work.

8.02 CHANGES IN THE CONTRACT SUM

A. Port to Decide How Changes are Measured. The Port may elect, in its sole discretion, how changes in the Work will be measured for payment. Change in the Work may be priced on a lump sum basis, through Unit Prices, as Force Account, or by another method documented in the executed Change Order, Unilateral Change Directive, or Minor Change in the Work.
B. Determination of Cost of Change. The total cost of any change in the Work, including a claim under Article 11, shall not exceed the prevailing cost for the Work in the locality of the Project. In all circumstances, the change in the Work shall be limited to the reasonable, actual cost of the following components:

1. Direct labor costs: These are the actual labor costs determined by the number of additional craft hours at their normal hourly rate necessary to perform a change in the Work. The hourly cost of labor will be based upon the following:
   a. Basic wages and fringe benefits: The hourly wage (without markup or labor burden) and fringe benefits paid by the Contractor as established by the Washington Department of Labor and Industries or contributed to labor trust funds as itemized fringe benefits, whichever is applicable, not to exceed that specified in the applicable “Intent to Pay Prevailing Wage,” for the laborers, apprentices, journeymen, and foremen performing or directly supervising the change in the Work on site. These wages do not include the cost of Contractor’s project manager or superintendent or above, and the premium portion of overtime wages is not included unless pre-approved in writing by the Port. Costs paid or incurred by the Contractor for vacations, per diem, subsistence, housing, travel, bonuses, stock options, or discretionary payments to employees are not separately reimbursable. The Contractor shall provide to the Port copies of payroll records, including certified payroll statements for itself and Subcontractors of any tier, upon the Port’s request.
   b. Workers’ insurance: Direct contributions to the State of Washington as industrial insurance; medical aid; and supplemental pension by class and rates established by the Washington Department of Labor and Industries.
   c. Federal insurance: Direct contributions required by the Federal Insurance Compensation Act (FICA); Federal Unemployment Tax Act (FUTA); and State Unemployment Compensation Act (SUCA).

2. Direct material costs: This is an itemization, including material invoices, of the quantity and actual cost of additional materials necessary to perform the change in the Work. The cost will be the net cost after all discounts or rebates, freight costs, express charges, or special delivery costs, when applicable. No lump sum costs will be allowed unless approved in advance by the Port.

3. Construction equipment usage costs: This is an itemization of the actual length of time that construction equipment necessary and appropriate for the Work is used solely on the changed Work times the applicable rental cost, as established by the lower of the local prevailing rates published in www.equipmentwatch.com, as modified by the AGC/WSDOT agreement, or the actual rate paid to an unrelated third party. If more than one rate is applicable, the lowest available rate will be utilized. Rates and quantities of equipment rented that exceed the local fair market rental costs shall be subject to the Port’s prior written approval. Total rental charges for equipment or tools shall not exceed 75% of the fair market purchase value of the equipment or the tool. Actual, reasonable mobilization costs are permitted if the equipment is brought to the site solely for the change in the Work. Mobilization and standby costs shall not be charged for equipment already present on the site.

The rates in effect at the time of the performance of the changed Work are the maximum rates allowable for equipment of modern design and in good working condition and include full compensation for furnishing all fuel, oil, lubrication, repairs, maintenance, and insurance. No gas surcharges are payable. Equipment not of modern design and/or not
4. Subcontractor costs: These are payments the Contractor makes to Subcontractors for changed Work performed by Subcontractors. The Subcontractors’ cost of changed Work shall be determined in the same manner as prescribed in this Section 8.02 and, among other things, shall not include consultant costs, attorneys’ fees, or claim preparation expenses.

5. Service provider costs: These are payments the Contractor makes to service providers for changed Work performed by service providers. The service providers’ cost of changed Work shall be determined in the same manner as prescribed in this Section 8.02.

6. Markup: This is the maximum total amount for overhead, profit, and other costs, including office, home office, and site overhead (including purchasing, project manager, superintendent, project engineer, estimator, and their vehicles and clerical assistants), taxes (except for sales tax on the Contract Sum), warranty, safety costs, printing and copying, layout and control, quality control/assurance, small or hand tools (a tool that costs $500 or less and is normally furnished by the performing contractor), preparation of as-built drawings, impact on unchanged Work, Change Order and/or claim preparation, and delay and impact costs of any kind (cumulative, ripple, or otherwise), added to the total cost to the Port of any Change Order work. No markup shall be due, however, for direct settlements of Subcontractor claims by the Port after Substantial Completion. The markup shall be limited in all cases to the following schedule:

   a. Direct labor costs -- 20% markup on the direct cost of labor for the party (Contractor or Subcontractor) providing labor related to the change in the Work;

   b. Direct material costs -- 20% markup on the direct cost of material for the party (Contractor or Subcontractor) providing material related to the change in the Work;

   c. Construction equipment usage costs -- 10% markup on the direct cost of equipment for the party (Contractor or Subcontractor) providing equipment related to the change in the Work;

   d. Contractor markup on Subcontractor costs -- 10% markup for the Contractor on the direct cost (excluding markup) of a change in the Work performed by Subcontractors (and for Subcontractors, for a change in the Work performed by lower-tier Subcontractors); and

   e. Service provider costs -- 5% markup for the Contractor on the direct cost (excluding markup) of a change in the Work performed by service providers.

The total summed markup of the Contractor and all Subcontractors of any tier shall not exceed 30% of the direct costs of the change in the Work. If the markup would otherwise exceed 30%, the Contractor shall proportionately reduce the markup for the Contractor and all Subcontractors of any tier.

7. Cost of change in insurance or bond premium. This is defined as:

   a. Contractor’s liability insurance: The actual cost (expressed as a percentage submitted with the certificate of insurance provided under the Contract Documents and subject to audit) of the Contractor’s liability insurance arising directly from the changed Work; and
b. Public works bond: The actual cost (expressed as a percentage submitted under the Contract Documents and subject to audit) of the Contractor’s performance and payment bond arising directly from the changed Work.

Upon request, the Contractor shall provide the Port with supporting documentation from its insurer or surety of any associated cost incurred. The cost of the insurance or bond premium together shall not exceed 2.0% of the cost of the changed Work.

8. Unit Prices. If Unit Prices are specified in the Contract Documents or established by agreement of the parties for certain Work, the Port may apply them to the changed Work. Unit Prices shall include pre-agreed rates for material quantities and shall include reimbursement for all direct and indirect costs of the Work, including overhead, profit, bond, and insurance costs arising out of or related to the Unit Priced item. Quantities must be supported by field measurement statements signed by the Port, and the Port shall have access as necessary for quantity measurement. The Port shall not be responsible for not-to-exceed limit(s) without its prior written approval.

8.03 CHANGES IN THE CONTRACT TIME

A. Extension of the Contract Time. If the Contractor is delayed at any time in the commencement or progress of the Work by events for which the Port is responsible, by unanticipated abnormal weather (subject to Section 8.03(E) below), or by other causes not the fault or responsibility of the Contractor that the Port determines may justify a delay in the Contract Time, then the Contract Time shall be extended by Change Order for such reasonable time as the Port may determine. In no event, however, shall the Contractor be entitled to any extension of time absent proof of: (1) delay to an activity on the critical path of the Project, or (2) delay transforming an activity to the critical path, so as to actually delay the anticipated date of Substantial Completion.

B. Allocation of responsibility for delay not caused by Port or Contractor. If a delay was not caused by the Port, the Contractor, or anyone acting on behalf of any of them, the Contractor is entitled only to an increase in the Contract Time but not an increase in the Contract Sum.

C. Allocation of responsibility for delay caused by Port. If a delay was caused by the Port or someone acting on behalf of the Port and affected the critical path, the Contractor shall be entitled to a change in the Contract Time and Contract Sum in accordance with Section 8.02. The Contractor shall not recover damages, an equitable adjustment, or an increase in the Contract Sum or Contract Time from the Port, however, where the Contractor could reasonably have avoided the delay. The Port is not obligated directly or indirectly for damages for any delay suffered by a Subcontractor of any tier that does not increase the Contract Time.

D. Allocation of responsibility for delay caused by Contractor. If a delay was caused by the Contractor, a Subcontractor of any tier, or anyone acting on behalf of any of them, the Contractor is not entitled to an increase in the Contract Time or in the Contract Sum.

E. Adverse weather. If adverse weather is identified as the basis for a claim for additional time, the claim shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not reasonably have been anticipated and had an adverse effect on the critical path of construction, and that the Work was on schedule (or not behind schedule through the fault of the Contractor) at the time the adverse weather conditions occurred. Neither the Contract Time nor the Contract Sum will be adjusted for normal inclement weather. For a claim based on adverse weather, the Contractor shall be eligible only for a change in the Contract Time (but not a change in the Contract Sum) if the Contractor can substantiate that
there was significantly greater than normal inclement weather considering the full term of the Contract Time.

F. Damages for delay. In the event the Contractor (including any Subcontractors of any tier) is held to be entitled to damages from the Port for delay beyond the amount permitted in Section 8.02(B), the total combined damages to the Contractor and any Subcontractors of any tier for each day of delay shall be limited to the same daily liquidated damage rate specified in the Contract Documents due the Port for the Contractor’s delay in achieving Substantial Completion. By submitting a bid on the Work and executing the Contract, the Contractor represents that these liquidated damages are a reasonable estimate of its loss.

G. Limitation on damages. The Contractor shall not be entitled to damages arising out of loss of efficiency; morale, fatigue, attitude, or labor rhythm; constructive acceleration; home office overhead; expectant under run; trade stacking; reassignment of workers; rescheduling of Work, concurrent operations; dilution of supervision; learning curve; beneficial or joint occupancy; logistics; ripple; season change; extended or increased overhead or general conditions; profit upon damages for delay; impact damages including cumulative impacts; or similar damages. Any effect that such alleged costs may have upon the Contractor or its Subcontractors of any tier is fully compensated through the markup on Change Orders paid through Section 8.02(B) and any liquidated damages paid hereunder.

8.04 RESERVATION OF RIGHTS

A. Reservations of rights void unless signed by Port. Reservations of rights will be deemed waived and are void unless any reserved rights are described in detail and are signed by the Contractor and the Port.

B. Procedure for unsigned reservations of rights. If the Contractor adds a reservation of rights not signed by the Port to any Change Order, Unilateral Change Directive, Change Order proposal, Application for Payment, or any other document, all amounts and all Work therein shall be considered disputed and not payable until costs are re-negotiated or the reservation is withdrawn or changed in a manner satisfactory to and signed by the Port. If the Port makes payment based on a document that contains a reservation of rights not signed by the Port, and if the Contractor cashes such payment, then the reservation of rights shall be deemed waived, withdrawn, and of no effect.

8.05 UNIT PRICES

A. Adjustment to Unit Prices. If Unit Prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed (less than eighty percent (80%) or more than one hundred and twenty percent (120%) of the quantity estimated) so that application of a Unit Price would be substantially unfair, the applicable Unit Price but not the Contract Time shall be adjusted if the Port prospectively approves a Change Order revising the Unit Price.

B. Procedure to change Unit Prices. The Contractor or Port may request a Change Order revising a Unit Price by submitting information to support the change. A proposed change to a Unit Price will be evaluated by the Port based on the change in cost resulting solely from the change in quantity, any change in production rate or method as compared to the original plan, and the share, if any, of fixed expenses properly chargeable to the item. If the Port and Contractor agree on the change, a Change Order will be executed. If the parties cannot agree, the Contractor shall comply with the dispute resolution procedures (Article 11).
ARTICLE 9 - SUSPENSION AND TERMINATION OF CONTRACT

9.01 PORT’S RIGHT TO SUSPEND WORK

A. Port may suspend the Work. The Port may at any time suspend the Work, or any part thereof, by giving notice to the Contractor. The Work shall be resumed by the Contractor as soon as possible, but no later than fourteen (14) days after the date fixed in a notice to resume the Work. The Port shall reimburse the Contractor for appropriate and reasonable expenses consistent with Section 8.02 incurred by the Contractor as a result of the suspension, except where a suspension is the result of the Contractor repeatedly or materially failing to carry out or correct the Work in accordance with the Contract Documents, and the Contractor shall take all necessary steps to minimize expenses.

B. Contractor obligations. During any suspension of Work, the Contractor shall take every precaution to prevent damage to, or deterioration of, the Work. The Contractor shall be responsible for all damage or deterioration to the Work during the period of suspension and shall, at its sole expense, correct or restore the Work to a condition acceptable to the Port prior to resuming Work.

9.02 TERMINATION OF CONTRACT FOR CAUSE BY THE PORT

A. Port may terminate for cause. If the Contractor is adjudged bankrupt or makes a general assignment for the benefit of the Contractor’s creditors, if a receiver is appointed due to the Contractor’s insolvency, or if the Contractor, in the opinion of the Port, persistently or materially refuses or fails to supply enough properly skilled workmen or materials for proper completion of the Contract, fails to make prompt payment to Subcontractors or suppliers for material or labor, disregards laws, ordinances, or the instructions of the Port, fails to prosecute the Work continuously with promptness and diligence, or otherwise materially violates any provision of the Contract, then the Port, without prejudice to any other right or remedy, may terminate the Contractor after giving the Contractor seven (7) days’ written notice (during which period the Contractor shall have the right to cure).

B. Procedure following termination for cause. Following a termination for cause, the Port may take possession of the Project site and all materials and equipment, and utilize such materials and equipment to finish the Work. The Port may also exclude the Contractor from the Project site(s). If the Port elects to complete all or a portion of the Work, it may do so as it sees fit. The Port shall not be required to accept the lowest bid for completion of the Work and may choose to complete all or a portion of the Work using its own work force. If the Port elects to complete all or a portion of the Work, the Contractor shall not be entitled to any further payment until the Work is finished. If the expense of finishing the Work, including compensation for additional managerial and administrative services of the Port, exceeds the unpaid balance of the Contract Sum, the excess shall be paid by the Contractor.

C. Port’s remedies following termination for cause. The Port may exercise any rights, claims or demands that the Contractor may have against third persons in connection with the Contract, and for this purpose the Contractor assigns and transfers to the Port all such rights, claims, and demands.

D. Inadequate termination for cause converted to termination for convenience. If, after the Contractor has been terminated for cause, it is determined that inadequate “cause” for such termination exists, then the termination shall be considered a termination for convenience pursuant to Section 9.03.
9.03 TERMINATION OF CONTRACT FOR CONVENIENCE BY THE PORT

A. Port may terminate for convenience. The Port may, at any time (without prejudice to any right or remedy of the Port), terminate all or any portion of the Contract for the Port's convenience and without cause. The Contractor shall be entitled to receive payment consistent with the Contract Documents only for Work properly executed through the date of termination, and costs necessarily incurred by reason of the termination (such as the cost of settling and paying claims arising out of the termination under subcontracts or orders), along with a fee of one percent (1%) of the Contract Sum not yet earned on the whole or part of the Work. The total amount to be paid to the Contractor shall not exceed the Contract Sum as reduced by the amount of payments otherwise made. The Port shall have title to all Work performed through the date of termination.

9.04 TERMINATION OF CONTRACT BY THE CONTRACTOR

A. Contractor may terminate for cause. The Contractor may terminate the Contract if the Work is stopped for a period of sixty (60) consecutive days through no act or fault of the Contractor or a Subcontractor of any tier, for either of the following reasons:
   1. Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped; or
   2. An act of government, such as a declaration of national emergency that requires all Work to be stopped.

B. Procedure for Contractor termination. If one of the reasons described in Section 9.04A exists, the Contractor may, upon seven (7) days' written notice to the Port (during which period the Port has the opportunity to cure), terminate the Contract and recover from the Port payment for Work executed through the date of termination in accordance with the Contract Documents and for proven loss with respect to materials, equipment, tools, and construction equipment and machinery, including reasonable overhead and profit on Work executed and direct costs incurred by reason of such termination. The total recovery of the Contractor shall not exceed the unpaid balance of the Contract Sum.

C. Contractor may stop the Work for failure of Port to pay undisputed amounts. The Contractor may stop Work under the Contract if the Port does not pay undisputed amounts due and owing to the Contractor within fifteen (15) days of the date established in the Contract Documents. If the Port fails to pay undisputed amounts, the Contractor may, upon fifteen (15) additional days' written notice to the Port, during which the Port can cure, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately, and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shut-down, delay, and start-up.

9.05 SUBCONTRACT ASSIGNMENT UPON TERMINATION

A. Subcontracts assigned upon termination. Each subcontract is hereby assigned by the Contractor to the Port provided that:
   1. The Port requests that the subcontract be assigned;
   2. The assignment is effective only after termination by the Port and only for those subcontracts that the Port accepts in writing; and
      a. The assignment is subject to the prior rights of the surety, if any, under any bond issued in accordance with the Contract Documents.
When the Port accepts the assignment of a subcontract, the Port assumes the Contractor's rights and obligations under the subcontract, but only for events and payment obligations that arise after the date of the assignment.

ARTICLE 10 - BONDS

10.01 CONTRACTOR PERFORMANCE AND PAYMENT BONDS

A. Contractor to furnish performance and payment bonds. Within ten (10) days following its receipt of a notice of award, and as part of the Contract Sum, the Contractor shall secure and furnish duly executed performance and payment bonds using the forms furnished by the Port. The bonds shall be executed by a surety (or sureties) reasonably acceptable to the Port, admitted and licensed in the State of Washington, registered with the Washington State Insurance Commissioner, and possessing an A.M. Best rating of “A minus, FSC (6)” or better and be authorized by the U.S. Department of the Treasury. Pursuant to RCW 39.08, the bonds shall be in an amount equal to the Contract Sum, and shall be conditioned only upon the faithful performance of the Contract by the Contractor within the Contract Time and upon the payment by the Contractor of all taxes, fees, and penalties to the State of Washington and all laborers, Subcontractors, and suppliers, and others who supply provisions, equipment, or supplies for the performance of the Work covered by this Contract. The bonds shall be signed by the person or persons legally authorized to bind the Contractor.

B. Port may notify surety. If the Port makes or receives a claim against the Contractor, the Port may, but is not obligated to, notify the Contractor's surety of the nature and amount of the claim. If the claim relates to a possibility of a Contractor's default, the Port may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

ARTICLE 11 - DISPUTE RESOLUTION

11.01 NOTICE OF PROTEST AND CLAIM

A. Dispute resolution procedure mandatory. All claims, direct or indirect, arising out of, or relating to, the Contract Documents or the breach thereof, shall be decided exclusively by the following alternative dispute resolution procedure, unless the parties mutually agree otherwise. If the Port and Contractor agree to a partnering process to assist in the resolution of disputes, the partnering process shall occur prior to, and not be in place of, the mandatory dispute resolution procedures set forth below.

B. Notice of protest defined. Except for claims requiring notice before proceeding with the affected Work as otherwise described in the Contract Documents, the Contractor shall provide immediate oral notice of protest to the Engineer prior to performing any disputed Work and shall submit a written notice of protest to the Port within seven (7) days of the occurrence of the event giving rise to the protest that includes a clear description of the event(s). The protest shall identify any point of disagreement, those portions of the Contract Documents believed to be applicable, and an estimate of quantities and costs involved. When a protest relates to cost, the Contractor shall keep full and complete records and shall permit the Port to have access to those records at any time as requested by the Port.

C. Claim defined. A claim is a demand by one of the parties seeking adjustment or interpretation of the Contract terms, payment of money, extension of time, or other relief with respect to the terms of the Contract Documents. The term “claim” also includes all disputes and matters in question between the Port and Contractor arising out of, or relating to, the Contract Documents. Claims must be initiated in writing and include a detailed factual statement and clear description of the claim providing all necessary dates, locations, and items of Work, the date or dates on which the events occurred that give rise to the claim, the names of employees
or representatives knowledgeable about the claim, the specific provisions of the Contract Documents that support the claim, any documents or oral communications that support the claim, any proposed change in the Contract Sum (showing all components and calculations) and/or Contract Time (showing cause and analysis of the resultant delay in the critical path), and all other data supporting the claim. Claims shall also be submitted with a statement certifying, under penalty of perjury, that the claim as submitted is made in good faith, that the supporting cost and pricing data are true and accurate to the best of Contractor's knowledge and belief, that the claim is fully supported, and that the amount requested accurately reflects the adjustment in the Contract Sum or Contract Time for which Contractor believes the Port is liable. A claim shall be deemed to include all changes, direct and indirect, in cost and in time to which the Contractor and Subcontractors of any tier are entitled and may not contain reservations of rights without the Port's written approval; any unapproved reservations of rights shall be without effect.

D. Claim procedure. The Contractor shall submit a written claim within thirty (30) days of providing written notice of protest. The Contractor may delay submitting supporting data by an additional thirty (30) days if it notifies the Port in its claim that substantial data must be assembled. Any claim of a Subcontractor of any tier may be brought only through, and after review by and concurrence of, the Contractor.

E. Failure to comply with notice of protest and claim requirements waives claims. Any notice of protest by the Contractor and any claim of the Contractor, whether under the Contract or otherwise, must be made pursuant to, and in strict accordance with, the applicable provisions of the Contract. Failure to properly and timely submit a notice of protest or to timely submit a claim shall waive the claim. No act, omission, or knowledge, actual or constructive, of the Port shall waive the requirement for timely written notice of protest and a timely written claim unless the Port and the Contractor sign an explicit, unequivocal written waiver approved by the Port. The Contractor expressly acknowledges and agrees that the Contractor's failure to timely submit required notices of protest and/or timely submit claims has a substantial impact upon and prejudices the Port. For the purpose of calculating time periods, an "event giving rise to a claim," among other things, is not a Request for Information, but rather is a response that the Contractor believes would change the Contract Sum and/or Contract Time.

F. False claims. The Contractor shall not make any fraudulent misrepresentations, concealments, errors, omissions, or inducements to the Port in the formation or performance of the Contract. If the Contractor or a Subcontractor of any tier submits a false or frivolous claim to the Port, which for purposes of this Section 11.01(F) is defined as a claim based in whole or in part on a materially incorrect fact, statement, representation, assertion, or record, the Port shall be entitled to collect from the Contractor by offset or otherwise (without prejudice to any right or remedy of the Port) any and all costs and expenses, including investigation and consultant costs, incurred by the Port in investigating, responding to, and defending against the false or frivolous claim.

G. Compliance with lien and retainage statutes required. If a claim relates to, or is the subject of, a lien or retainage claim, the party asserting the claim may proceed in accordance with applicable law to comply with the notice and filing deadlines prior to resolution of the claim by mediation or by litigation.

H. Performance required pending claim resolution. Pending final resolution of a claim, the Contractor shall continue to perform the Contract and maintain the Progress Schedule, and the Port shall continue to make payments of undisputed amounts due in accordance with the Contract Documents.
11.02 MEDIATION

A. Claims must be subject to mediation. At any time following the Port's receipt of a written claim, the Port may require that an officer of the Contractor and the Port's designee (all with authority to settle) meet, confer, and attempt to resolve a claim. If the claim is not resolved during this meeting, the claim shall be subject to mandatory mediation as a condition precedent to the initiation of litigation. This requirement can be waived only by an explicit, written waiver signed by the Port and the Contractor.

B. Mediation procedure. A request for mediation shall be filed in writing with the other party to the Contract, and the parties shall promptly attempt to agree upon a mediator. If the parties have not reached agreement within thirty (30) days of the request, either party may file the request with the American Arbitration Association or such other alternative dispute resolution service to which the parties mutually agree, with a copy to the other party, and the mediation shall be administered by the American Arbitration Association (or other agreed service). The parties to the mediation shall share the mediator's fee and any filing fees equally. The mediation shall be held in Pierce County, Washington, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof. Unless the Port and the Contractor mutually agree in writing otherwise, all claims shall be considered at a mediation session that shall occur prior to Final Completion.

11.03 LITIGATION

A. Claims not resolved by mediation are subject to litigation. Claims not resolved through mediation shall be resolved by litigation, unless the parties mutually agree otherwise. The venue for any litigation shall be Pierce County, Washington. The Contractor may bring no litigation on claims unless such claims have been properly raised and considered in the procedures of this Article 11. The Contractor must demonstrate in any litigation that it complied with all requirements of this Article.

B. Litigation must be commenced promptly. All unresolved claims of the Contractor shall be waived and released, unless the Contractor has complied with the requirements of the Contract Documents, and litigation is served and filed within 180 days of the date of Substantial Completion approved in writing by the Port or termination of the Contract. The pendency of mediation (the time period between receipt by the non-requesting party of a written mediation request and the date of mediation) shall toll these deadlines until the earlier of the mediator providing written notice to the parties of impasse, or thirty (30) days after the date of the mediation session.

C. Port not responsible for attorneys’ fees. Neither the Contractor nor a Subcontractor of any tier, whether claiming under a bond or lien statute or otherwise, shall be entitled to attorneys’ fees directly or indirectly from the Port (but may recover attorneys’ fees from the bond or statutory retainage fund itself to the extent allowable under law).

D. Port may join Contractor in dispute. The Port may join the Contractor as a party to any litigation or arbitration involving the alleged fault, responsibility, or breach of contract of the Contractor or Subcontractor of any tier.

ARTICLE 12 - MISCELLANEOUS

12.01 GENERAL

A. Rights and remedies are cumulative. The rights and remedies of the Port set forth in the Contract Documents are cumulative, and in addition to and not in limitation of, any rights and
remedies otherwise available to the Port. The pursuit of any remedy by the Port shall not be construed to bar the Port from the pursuit of any other remedy in the event of similar, different, or subsequent breaches of this Contract. All such rights of the Port shall survive completion of the Project or termination of the Contractor.

B. Reserved rights do not give rise to duty. The rights reserved or possessed by the Port to take any action shall not give rise to a duty for the Port to exercise any such right.

12.02 WAIVER

A. Waiver must be in writing and authorized by Port. Waiver of any provisions of the Contract Documents must be in writing and authorized by the Port. No other waiver is valid on behalf of the Port.

B. Inaction or delay not a waiver. No action, delay in acting, or failure to act by the Port shall constitute a waiver of any right or remedy of the Port, or constitute an approval or acquiescence of any breach or defect in the Work. Nor shall any delay or failure of the Port to act waive or otherwise prejudice the right of the Port to enforce a right or remedy at any subsequent time.

C. Claim negotiation not a waiver. The fact that the Port and the Contractor may consider, discuss, or negotiate a claim that has or may have been defective or untimely under the Contract shall not constitute a waiver of the provisions of the Contract Documents unless the Port and the Contractor sign an explicit, unequivocal waiver.

12.03 GOVERNING LAW

A. Washington law governs. This Contract and the rights and duties of the parties hereunder shall be governed by the internal laws of the State of Washington, without regard to its conflict of law principles.

12.04 COMPLIANCE WITH LAW

A. Contractor to comply with applicable laws. The Contractor shall at all times comply with all applicable Federal, State, and local laws, ordinances, and regulations. This compliance shall include, but is not limited to, the payment of all applicable taxes, royalties, license fees, penalties, and duties.

B. Contractor to provide required notices. The Contractor shall give notices required by all applicable Federal, State, and local laws, ordinances and regulations bearing on the Work.

C. Contractor to confine operations at site to permitted areas. The Contractor shall confine operations at the Project site to areas permitted by applicable laws, ordinances, permits, rules and regulations, and lawful orders of public authorities and the Contract Documents.

12.05 ASSIGNMENT

A. Assignment. The Port and Contractor respectively bind themselves, their partners, successors, assigns, and legal representatives to the other party and to the partners, successors, assigns, and legal representatives of such other party. The Contractor may not assign, transfer, or novate all or any portion of the Contract, including but not limited to, any claim or right to the Contract Sum, without the Port’s prior written consent. If the Contractor attempts to make an assignment, transfer, or novation without the Port’s consent, the assignment shall be of no effect, and Contractor shall nevertheless remain legally responsible for all obligations under the Contract. The Contractor also shall not assign or transfer to any third party any claims it may have against the Port arising under the Contract or otherwise related to the Project.
12.06  TIME LIMIT ON CAUSES OF ACTION
A. Time limit on causes of action. The Port and Contractor shall commence all causes of action, whether in contract, tort, breach of warranty, or otherwise, against the other arising out of or related to the Contract in accordance with the requirements of the dispute resolution procedure set forth in Article 11 of these General Conditions, within the time period specified by applicable law, and within the time limits identified in the Contract Documents. The Contractor waives all claims and causes of action not commenced in accordance with this Section 12.06.

12.07  SERVICE OF NOTICE
A. Notice. Written notice under the Contract Documents by either the Contractor or Port may be served on the other party by personal service, electronic or facsimile transmission, or delivery service to the last address provided in writing to the other party. For the purpose of measuring time, notice shall be deemed to be received by the other party on the next business day following the sender’s electronic or facsimile transmittal or delivery by delivery service.

12.08  RECORDS
A. Contractor and Subcontractors to maintain records and cooperate with Port audit. The Contractor and Subcontractors of any tier shall maintain books, ledgers, records, documents, estimates, bids, correspondence, logs, schedules, emails, and other tangible and electronic data and evidence relating or pertaining to costs and/or performance of the Contract (“records”) to such extent and in such detail as will properly reflect and fully support compliance with the Contract Documents and with all costs, charges, and other amounts of whatever nature. The Contractor shall preserve these records for a period of six (6) years following the date of Final Acceptance under the Contract. Within seven (7) days of the Port’s request, both during the Project and for six (6) years following Final Acceptance, the Contractor and Subcontractors of any tier shall make available, at their office during normal business hours, all records for inspection, audit, and reproduction (including electronic reproduction) by the Port or its representatives; failure to fully comply with this requirement shall constitute a material breach of contract and a waiver of all claims by the Contractor and Subcontractors of any tier.
B. Rights under RCW 42.56. The Contractor agrees, on behalf of itself and Subcontractors of any tier, that any rights under Chapter 42.56 RCW will commence at Final Acceptance, and that the invocation of such rights at any time by the Contractor or a Subcontractor of any tier, or their respective representatives, shall initiate an equivalent right to disclosures from the Contractor and Subcontractors of any tier for the benefit of the Port.

12.09  STATUTES
A. Contractor to comply with Washington statutes. The Contractor shall abide by the provisions of all applicable statutes, regulations, and other laws. Although a number of statutes are referenced in the Contract Documents, these references are not meant to be, and are not, a complete list:
1. Pursuant to RCW 39.06, “Registration, Licensing of Contractors,” the Contractor shall be registered and licensed as required by the laws of the State of Washington, including but not limited to, RCW 18.27, “Registration of Contractors,” and shall satisfy all State of Washington bonding and insurance requirements. The Contractor shall also have a current state unified business identifier number; have industrial insurance coverage for the Contractor’s employees working in Washington as required by Title 51 RCW; have an employment security department number as required by Title 50 RCW; have a state excise tax registration number as required in Title 82 RCW; and not be disqualified from
bidding on any public works contract under RCW 39.06.010 (unregistered or unlicensed contractors) or RCW 39.12.065(3) (prevailing wage violations).

2. The Contractor shall comply with all applicable provisions of RCW 49.28, “Hours of Labor.”

3. The Contractor shall comply with pertinent statutory provisions relating to public works of RCW 49.60, “Discrimination.”

5. Pursuant to RCW 50.24, “Contributions by Employers,” in general and RCW 50.24.130 in particular, the Contractor shall pay contributions for wages for personal services performed under this Contract or arrange for an acceptable bond.

7. Pursuant to RCW 49.70, “Worker and Community Right to Know Act,” and WAC 296-62-054 et seq., the Contractor shall provide to the Port, and have copies available at the Project site, a workplace survey or material safety data sheets for all “hazardous” chemicals under the control or use of Contractor or any Subcontractor of any tier.

8. All products and materials incorporated into the Project as part of the Work shall be certified as “asbestos-free” and “lead-free” by United States standards, and shall also be free of all hazardous materials or substances. At the completion of the Project, the Contractor shall submit certifications of asbestos-free and of lead-free materials certifying that all materials and products incorporated into the Work meet the requirements of this Section, and shall also certify that materials and products incorporated into the Work are free of hazardous materials and substances.

END OF SECTION
PART 1 - GENERAL

1.01 RELATED WORK DESCRIBED ELSEWHERE

A. The provisions and intent of the Contract, including the General and Supplemental Conditions apply to this work as if specified in this section. Work related to this section is described throughout these Specifications.

1.02 SUBMITTAL REQUIREMENTS

A. Evidence of the required insurance within 10 days of the issued Notice of Award to the Contractor.

B. Updated evidence of insurance as required until final completion.

1.03 CONTRACTOR LIABILITY INSURANCE

A. The Contractor shall secure and maintain until Final Completion, at its sole cost and expense, the following insurance in carriers reasonably acceptable to the Port, licensed in the State of Washington, registered with the Washington State Insurance Commissioner, and possessing an A.M. Best rating of “A-, FSC (6)” or better.

B. The Port of Tacoma (Port) will be included as an additional insured(s) for both ongoing and completed operations by endorsement to the policy using ISO Form CG 20 10 11 85 or forms CG 20 10 03 97 and CG 20 37 10 01 (or equivalent coverage endorsements). The inclusion of the Port as an additional insured(s) shall not create premium liability for the Port. Also, by endorsement to the policy, there shall be:

1. An express waiver of subrogation in favor of the Port;
2. A cross liabilities clause; and
3. An endorsement stating that the Contractor’s policy is primary and not contributory with any insurance carried by the Port.

C. If the Contractor, Supplier, or Subcontractors will perform any work requiring the use of a licensed professional per, RCW 18, the Contractor shall provide evidence to the Port of professional liability insurance in amounts not less than $1,000,000.

D. This insurance shall cover all of the Contractor’s operations of whatever nature connected in any way with the Contract, including any operations performed by the Contractor’s Subcontractors of any tier. It is the obligation of the Contractor to ensure that all Subcontractors (at whatever level) carry a similar program that provides the identified types of coverage, limits of liability, inclusion of the Port as additional insured(s), waiver of subrogation, and cross liabilities clause. The Port reserves the right to reject any insurance policy as to company, form, or substance. Contractor’s failure to provide, or the Port’s acceptance of, the Contractor’s certificate of insurance does not waive the Contractor’s obligation to comply with the insurance requirements of the Contract as specifically described below:

1. Commercial General Liability Insurance on an Occurrence Form Basis including but not limited to:
   a. Bodily Injury Liability;
   b. Property Damage Liability;
   c. Contractual Liability;
d. Products - Completed Operations Liability;

e. Personal Injury Liability; and

Alternatively, a Commercial General Liability (CGL) policy is acceptable if all of the above coverages are incorporated in the policy and there are no marine exclusions that will remove coverage for either vessels or work done by or above or around the water.

2. Comprehensive Automobile Liability including but not limited to:

a. Bodily Injury Liability;

b. Property Damage Liability;

c. Personal Injury Liability;

d. Owned and Non-Owned Automobile Liability; and

e. Hired and Borrowed Automobile Liability.

3. Contractor’s Pollution Liability (CPL) covering claims for bodily injury, property damage and cleanup costs, and environmental damages from pollution conditions arising from the performance of covered operations.

a. If the Work involves remediation or abatement of regulated waste to include, but not limited to, asbestos containing materials, lead containing products, mercury, PCB, underground storage tanks, or other hazardous materials or substances, the CPL policy shall not exclude such coverage or a specific policy covering such exposure shall be required from the Contractor and all Subcontractors performing such Work.

b. If the Work involves transporting regulated materials or substances or waste, a separate policy or endorsement to the CPL policy specifically providing coverage for liability and cleanup arising from an upset of collision during transportation of hazardous materials or substances shall be required from the Contractor and all Subcontractors performing such Work.

c. It is preferred that CPL insurance shall be on a true occurrence form without a sunset clause. However, if CPL insurance is provided on a Claims Made basis, the policy shall have a retroactive date prior to the start of this project, and this insurance shall be kept in force for at least three years after the final completion of this project. Alternatively, the contractor at its option may provide evidence of extended reporting period of not less than three (3) years in its place. The Contractor shall be responsible for providing the Port with certificates of insurance each year evidencing this coverage.

d. The Port shall be named as an Additional Insured(s) on the CPL policy.

E. Except where indicated above, the limits of all insurance required to be provided by the Contractor shall be not less than $2,000,000 for each occurrence and $2,000,000 in the aggregate. However, coverage in the amounts of these minimum limits shall not be construed as to relieve the Contractor from liability in excess of such limits. The Additional Insured endorsement shall NOT be limited to the amounts specified by this contract unless expressly waived in writing by the Port of Tacoma.

F. Except where indicated above, the limits of all insurance required to be provided by the Contractor shall be not less than $2,000,000 for each occurrence. However, coverage in the amounts of these minimum limits shall not be construed as to relieve the Contractor from
liability in excess of such limits. The Additional Insured endorsement shall NOT be limited to the amounts specified by this contract unless expressly waived in writing by the Port.

G. Contractor shall certify that its operations are covered by the Washington State Worker's Compensation Fund. The Contractor shall provide its Account Number or, if self-insured, its Certificate of Qualification Number. The Contractor shall also provide evidence of Stop-Gap Employers' Liability Insurance.

H. The Contractor shall furnish, within ten (10) days following issuance of the Notice of Award, a certificate of insurance satisfactory to the Port evidencing that insurance in the types and minimum amounts required by the Contract Documents has been secured. The Certificate of Insurance shall be signed by an authorized representative of the insurer together with a copy of the endorsement, which shows that the Port is named as additional insured.

I. Contractor shall provide at least forty-five (45) days prior written notice to the Port of any termination or material change or ten (10) days notice in the case of non-payment of premium(s).

J. If the Contractor is required to make corrections to the Work after Final Completion, the Contractor shall obtain at its own expense, prior to the commencement of any corrective work, insurance coverage as required by the Contract Documents, which coverage shall be maintained until the corrections to the Work have been completed and accepted by the Port.

1.04 BUILDER'S RISK INSURANCE

A. Until Final Completion of the Work, the construction Work is at the risk of the Contractor and no partial payment shall constitute acceptance of the Work or relieve the Contractor of responsibility of completing the Work under the Contract.

B. Whenever the estimated cost of the Work is less than $25,000,000, the Port will purchase and maintain, in a company or companies lawfully authorized and admitted to do business in Washington, property insurance written on a builder's risk “all-risk” including Earthquake and Flood with applicable sub-limits, or equivalent policy form to cover the course of construction in the amount of the full insurable value thereof. This property insurance shall be maintained, unless otherwise provided in the Contract Documents or otherwise agreed in writing by all persons and entities who are beneficiaries of such insurance, until final payment has been made or until no person or entity other than the Port has an insurable interest in the property, whichever is later. This insurance shall include interests of the Port, the Contractor, and Subcontractors of any tier on the Project. There may be some differences between this Section and the builder's risk insurance secured by the Port; therefore, the Contractor shall provide an “installation floater” or similar property coverage for materials not yet installed, whether stored on site or off site or in transit, and the Contractor shall obtain property coverage for all Contractor-owned equipment and tools - each loss may be subject to a deductible. Losses up to the deductible amount shall be the responsibility of the Contractor. All tools and equipment not intended as part of the construction or installation will be the sole responsibility of the Contractor.

PART 2 - PRODUCTS - NOT USED

PART 3 - PRODUCTS - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 PREVAILING AND OTHER REQUIRED WAGES

A. The Contractor shall pay (and shall ensure that all Subcontractors of any tier pay) all prevailing wages and other wages (such as Davis-Bacon Act wages) applicable to the Project.

B. Pursuant to RCW 39.12, “Prevailing Wages on Public Works,” no worker, laborer, or mechanic employed in the performance of any part of the Work shall be paid less than the “prevailing rate of wage” in effect as of the date that bids are due.
   1. Based on the bid submittal deadline for this project, the applicable effective date for prevailing wages for this project is September 5, 2018

C. The State of Washington prevailing wage rates applicable for this public works project, which is located in Pierce County, may be found at the following website address of the Department of Labor and Industries:

D. The schedule of the prevailing wage rates is made a part of the Contract Documents by reference as though fully set forth herein, and a copy of the applicable prevailing wage rates are also available for viewing at the Port Administration Building, located at One Sitcum Plaza, Tacoma, WA 98421 (253-383-5841). Upon request to the Procurement Department at procurement@portoftacoma.com, the Port will email or mail a hard copy of the applicable Journey Level prevailing wages for this project.

E. Questions relating to prevailing wage data should be addressed to the Industrial Statistician.
   Mailing Address: Washington State Department of Labor and Industries
   Prevailing Wage Office
   P.O. Box 44540
   Olympia, WA 98504
   Telephone: (360) 902-5335
   Facsimile: (360) 902-5300
   1. If there is any discrepancy between the attached or provided schedule of prevailing wage rates and the published rates applicable under WAC 296-127-011, or if no schedule is attached, the applicable published rates shall apply with no increase in the Contract Sum. It is the Contractor's responsibility to ensure that the correct prevailing wage rates are paid.

F. Statement to Pay Prevailing Wages
   1. Prior to any payment being made by the Port under this Contract, the Contractor, and each Subcontractor of any tier, shall file a Statement of Intent to Pay Prevailing Wages under oath with the Port and certified by the Director of Labor and Industries.
   2. The statement shall include the hourly wage rate to be paid to each classification of workers entitled to prevailing wages, which shall not be less than the prevailing rate of wage, and the estimated number of workers in each classification employed on the Project by the Contractor or a Subcontractor of any tier, as well as the Contractor's contractor registration number and other information required by the Director of Labor and Industries.
3. The statement, and any supplemental statements, shall be filed in accordance with the requirements of the Department of Labor and Industries. No progress payment shall be made until the Port receives such certified statement.

G. The Contractor shall post in a location readily visible to workers at the Project site: (1) a copy of the Statement of Intent to Pay Prevailing Wages approved by the Industrial Statistician of the Department of Labor and Industries, and (2) the address and telephone number of the Industrial Statistician of the Department of Labor and Industries to whom a complaint or inquiry concerning prevailing wages may be directed.

H. If a State of Washington prevailing wage rate conflicts with another applicable wage rate (such as Davis-Bacon Act wage rate) for the same labor classification, the higher of the two shall govern.

I. Pursuant to RCW 39.12.060, if any dispute arises concerning the appropriate prevailing wage rate for work of a similar nature, and the dispute cannot be adjusted by the parties in interest, including labor and management representatives, the matter shall be referred for arbitration to the Director of the Department of Labor and Industries, and his or her decision shall be final and conclusive and binding on all parties involved in the dispute.

J. Immediately following the end of all work completed under this Contract, the Contractor, and each Subcontractor of any tier, shall file an approved Affidavit of Wages Paid with the Department of Labor and Industries (L&I).

K. The Contractor shall defend (at the Contractor's sole cost, with legal counsel approved by Port), indemnify, and hold the Port harmless from all liabilities, obligations, claims, demands, damages, disbursements, lawsuits, losses, fines, penalties, costs, and expenses, whether direct, indirect, including but not limited to, attorneys' fees and consultants’ fees and other costs and expenses, from any violation or alleged violation by the Contractor or any Subcontractor of any tier of RCW 39.12 (“Prevailing Wages on Public Works”) or Chapter 51 RCW (“Industrial Insurance”), including but not limited to, RCW 51.12.050.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 REQUIREMENTS APPLICABLE PORT-WIDE

A. The Contractor shall submit, prior to the start of work, a list of emergency contact numbers for itself and subcontractors, suppliers, and manufacturer representatives. Each person on the project site shall have a valid identification card that is tamper proof with laminated photo identification such as one of the following:

1. State-issued Driver's license (also required if driving a vehicle);
2. Card issued by a governmental agency;
3. Passport;
4. Pacific Maritime Association card; or
5. Labor organization identification card.

B. Identification cards shall be visible while on the work site or easily displayed when requested.

1.02 TRANSPORTATION WORKER IDENTIFICATION CARD (TWIC) SUMMARY

A. TWIC is required for all personnel needing unescorted access to secure and restricted areas of Port facilities subject to 33 CFR 105, including truckers, surveyors, construction personnel, and delivery personnel. Secure areas are those areas with security measures for access control in accordance with a Coast Guard approved security plan; restricted areas are those areas within a secure area that require increased limited access and a higher degree of security protection. New terminals under construction prior to terminal operations may not be designated secure areas. Construction on existing maritime transportation facilities and punchlist or other type of work requirements on facilities that have been certified under 33 CFR will require a TWIC.

B. Contractors should allow for application and enrollment for the security threat assessment and issuance of TWIC when submitting a bid.

1.03 ESCORTING

A. To access restricted Port facilities, all un-credentialed individuals must be accompanied by a person who has been issued a TWIC and trained as an escort.

C. For project specific information, refer to 01 14 00 - Work Restrictions.

1.04 ELIGIBILITY FOR TWIC

A. Refer to the Transportation Worker Identification Credential website at: https://twicprogram.tsa.dhs.gov/TWICWebApp for information on eligibility and applying for TWIC.

1.05 TWIC USE AND DISPLAY

A. Each worker granted unescorted access to secure areas of a facility must present their cards to authorized personnel, who will compare the holder to his or her photo, inspect security features on the TWIC, and evaluate the card for signs of tampering. The Coast Guard will verify TWIC’s when conducting facility inspections and during spot checks using hand-held scanners, ensuring credentials are valid.

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The accompanying Drawings and Specifications show and describe the location and type of Work to be performed under this project. Work is more specifically defined on the drawings listed in Section 00 01 15.

1. The Work under this contract is to provide, furnish and install all labor, materials and equipment required to complete the work, installed, tested, and ready for use, and as described in these documents.

2. The East Sitcum Terminal Stormwater Improvements & North Intermodal Yard Stormwater Treatment consists of:
   a. Remove approximately 1200 LF of exiting corrugated metal stormwater piping and replace with HDPE piping at East Sitcum Terminal (EST)
   b. Remove and/or rehabilitate existing storm drain structures at EST.
   c. Install HDPE piping at the North Intermodal Yard (NIM)
   d. Drainage structure modifications at NIM
   e. Install stormwater treatment vault at NIM
   f. Erosion and Sediment control, paving, and related work at the EST and NIM.

1.02 LOCATION

A. The work is located at:

   902 Port of Tacoma Road

   Tacoma, WA

1.03 WORK PERFORMED UNDER SEPARATE CONTRACTS

A. The Contractor shall, by way of the Engineer, familiarize itself with other contracts which have been awarded, about to be awarded or are in progress in the same or immediate area. The Contractor shall coordinate the progress of its work with the established schedules for completion and phasing.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section specifies work sequence and constraints.

B. The purpose of the milestones, sequence, and limitations of construction are to ensure that the Contractor understands the requirements and limitations on its work by the specific characteristics of the Contract, schedules and conducts work in a manner consistent with achieving these purposes, and complies with the construction schedule, the specific sequence, constraints, milestones, and limitations of work specified.

C. Sequence of construction: Plan the sequence of construction to accommodate all the requirements of the documents. The Contract Price shall include all specified requirements as described in this Section.

1.02 CONTRACTOR ACCESS AND USE OF PREMISES

A. Activity Regulations

1. Ensure Contractor personnel deployed to the project become familiar with and follow all regulations or restrictions established by the Engineer.

B. Working Facility

1. The Facility will remain in operation for the duration of construction. The Contractor shall conduct all items of the Work in such a manner as to prevent interference with the normal operations of the Facility.

2. The Contractor and subcontractors, suppliers, and manufacturer representatives shall provide a list of emergency contact numbers and a list of all on-site personnel and vehicle license plates numbers to the Engineer prior to site access and start of work. Each person on the project site shall have a current Transportation Worker Identification Credential (TWIC) card. Contractor related deliveries may, at the Contractor's discretion and expense, provide qualified TWIC escorts in sufficient number to maintain production rates to meet schedule requirements. Otherwise all delivery personnel are required to have a current Transportation Identification Card.

C. Work Site Regulations

1. Keep within the limits of work and assigned avenues of ingress and egress. Do not enter any areas outside the designated work location unless previously approved by the Engineer. The Contractor must comply with the following conditions:

   a. Restore all common areas to a clean and useable condition that permits the resumption of Tenant operations after the Contractor ceases daily work.

   b. Be responsible for control and security of Contractor-owned equipment and materials at the work site. Report to Port Security (phone (253) 383-9472) any missing/lost/stolen property.

   c. Ensure all materials, tools and equipment will be removed from the site or secured within the designated laydown area at the end of each shift.

1.03 WORK SEQUENCE

A. Refer to Drawing G01.05 for general phasing plan.

1. First order of work shall begin at EST.
2. At EST, work shall be sequenced as shown.
3. Work at NIM may be completed concurrently with EST.

1.04 CONSTRAINTS - GENERAL

A. Constraints for Work at Site
   1. All work shall be coordinated through the Engineer.
   2. Work schedule at the terminal will be coordinated with the terminal operator or tenant operation by the Engineer.
   3. Terminal operations shall not be impacted by construction activities.
   4. Contractor may be required to work during certain hours when the terminal is non-operational. This may include nights and weekends.
   5. Contractor shall maintain a flexible schedule to accommodate terminal operations.
   6. Open excavations in active terminal traffic routes shall be protected to prevent access.
   7. Contractor shall provide a work plan, for review and approval by the Engineer, at areas of the terminal which are heavily used by traffic and operations.

1.05 CONSTRAINTS AT OPERATING TERMINAL

A. Business hours at this terminal commence Monday through Friday, 7am through 5pm.
B. Construction activities which impact intermodal operations are restricted to non-business hours, unless otherwise approved by the Engineer.

PART 2 - PRODUCTS

PART 3 - EXECUTION

END OF SECTION
PART 1 - GENERAL

1.01 MEASUREMENT AND PAYMENT

A. Measurement for payment will be at the unit price or lump sum as stipulated in the bid form for the items listed below.

B. Measurement and Payment shall be separated into the two separate work areas as indicated on the Drawings.

1.02 PAYMENT PROCEDURES

A. Monthly pay estimates shall clearly identify the work performed for the given time period based on the lump sum and unit prices in the Bid Form.

1. At the Pre-construction meeting, the Engineer and the Contractor shall agree upon a date each month when payment applications shall be submitted.

B. Prior to submitting a payment application, the Contractor and Engineer shall meet each month to review the work accomplished to determine the actual quantities including labor, materials and equipment charges to be billed.

1. Prior to the payment application meeting, the Contractor shall submit to the Engineer all measurement documentation as referenced in these contract documents; to include all measurement by weight, volume, or field.

2. For all change work being done on a Force Account basis, the Contractor shall submit, prior to meeting with Engineer, all Force Account back-up documentation as required to process the payment application where Force Account work is being billed. The Engineer and the Contractor shall review the documentation at the payment application meeting to verify quantities and review the work accomplished.

3. The Contractor shall bring a copy of all documentation to the pay application meeting with the Engineer.

C. Following the Engineers’ review, the Contractor shall prepare an original pay estimate with complete supporting documentation attached and submit it electronically using Adobe PDF file format to cpinvoices@portoftacoma.com.

D. An estimated cashflow statement projecting the Contractor’s monthly billings on the project shall be submitted with each payment application.

1.03 PAYMENT PRICING

A. Pricing for the various lump sum or unit prices in the Bid Form, as further specified herein, shall include all compensation to be received by the Contractor for furnishing all tools, equipment, supplies, and manufactured articles, and for all labor, operations, and incidentals appurtenant to the items of work being described, as necessary to complete the various items of the work in accordance with the requirements of the Contract Documents.

B. Pricing also includes all costs of compliance with the regulations of public agencies having jurisdiction, including safety and health requirements of the Occupational Safety and Health Administration of the U.S. Department of Labor (OSHA).

C. No separate payment will be made for any item that is not specifically set forth in the Bid Form, and all costs therefore shall be included in the prices named in the Bid Form for the various appurtenant items of work.
D. All other work not specifically mentioned in the measurement and payment sections identified below shall be considered incidental to the work performed and merged into the various unit and lump sum prices bid. Payment for work under one item will not be paid for under any other item.

E. The Port of Tacoma reserves the right to make changes should unforeseen conditions necessitate such changes. Where work is on a unit price basis, the actual quantities occasioned by such changes shall govern the compensation.

1.04 LUMP-SUM MEASUREMENT

A. Lump-sum measurement will be for the entire item, unit of Work, structure, or combination thereof, as specified and as indicated in the Contractor’s submitted bid.

1. If the Contractor requests progress payments for lump-sum items, such progress payments will be made in accordance with an approved schedule of values. The quantity for payment for completed work shall be an estimated percentage of the lump sum amount, agreed to between the Engineer and Contractor, payable in monthly progress payments in increments proportional to the work performed in amounts as agreed between the Engineer and the Contractor.

1.05 MEASUREMENT OF QUANTITIES FOR UNIT PRICES

A. Measurement Standards:

1. All Work to be paid for at a contract price per unit measurement, as indicated in the Contractor’s submitted bid, will be measured by the Engineer in accordance with United States Standard Measures.

B. Measurement by Weight:

1. Unless shipped by rail, material to be measured and paid for by weight shall be weighed on sealed scales regularly inspected by the Washington State Department of Agriculture’s Weights and Measures Section or its designated representative. Measurement shall be furnished by and at the expense of the Contractor. All weighing, measuring, and metering devices shall be suitable for the purpose intended and shall conform to the tolerances and specifications as outlined in Washington State Department of Transportation Standard Specifications, Division 1, General Requirements, Article 1-09.2, Weighing Equipment.

2. Provide or utilize platform scales of sufficient size and capacity to permit the entire vehicle or combination of vehicles to rest on the scale platform while being weighed. Combination vehicles may be weighed as separate units provided they are disconnected while being weighed. Scales shall be inspected and certified as often as the Engineer may deem necessary to ascertain accuracy. Costs incurred as a result of regulating, adjusting, testing, inspecting, and certifying scales shall be borne by the Contractor.

3. Trucks used to haul material being paid for by weight shall be weighed empty daily and at such additional times as the Engineer may require. Each truck shall bear a plainly legible identification mark. The Engineer may require the weight of the material be verified by weighing empty and loaded trucks on such other scales as the Engineer may designate.

C. Measurement by Volume:

1. Measurement by volume will be by the cubic dimension indicated in the Contractor’s submitted bid. Method of volume measurement will be by the unit volume in place or removed as shown on the Contract Drawings or as specified.
2. When material is to be measured and paid for on a volume basis and it is impractical to determine the volume by the specified method of measurement, or when requested by the Contractor in writing and accepted by the Engineer in writing, the material may be weighed in accordance with the requirements specified for weight measurement. Such weights will be converted to volume measurement for payment purposes. Factors for conversion from weight measurement to volume measurement will be determined by the Resident Engineer and shall be agreed to by the Contractor before such method of measurement of pay quantities will be accepted.

D. Field Measurement for Payment:

1. The Engineer will verify all quantities of Work performed by the Contractor on a unit-price basis, for progress payment purposes.

1.06 REJECTED, EXCESS, OR WASTED MATERIALS

A. Quantities of material wasted or disposed of in a manner not called for under the Contract; rejected loads of material, including material rejected after it has been placed by reasons of the failure of the Contractor to conform to the provisions of the Contract; material not unloaded from the transporting vehicle; material placed outside the lines indicated on the Contract Drawings or established by the Engineer; or material remaining on hand after completion of the Work, will not be paid for, and such quantities shall not be included in the final total quantities. No additional compensation will be permitted for loading, hauling, and disposing of rejected material.

1.07 EAST SITCUM TERMINAL STORMWATER MEASUREMENT AND PAYMENT ITEMS:

A. Mobilization and Demobilization, Bid Item 1.

1. Item Description: work and operations performed by the Contractor including, but not limited to, completion and submittal and approval of the following:
   a. All bonds and insurance certificates
   b. Construction Site Safety and Security Plan (CSSP)
   c. Initial Submittal Schedule
   d. Schedule of Values
   e. Detailed CPM progress schedule
   f. Pre-construction photographs and video
   g. Pre-construction submittals
   h. Establishing Contractor’s Project Manager, Superintendent, and other required specified personnel on the Work site full time.
   i. Furnishing and installing all temporary facilities and controls as needed for the safe and proper completion of the work, including utilities, sanitary facilities, barriers and enclosures, fences, staging and entrance areas, and field offices, as specified.
   j. Mobilization onto the site required in support of the Contractor’s first 30 days of operations.
   k. As-built drawings

2. Measurement: Shall be measured by the lump sum (LS).
3. Payment is for Mobilization of construction equipment and costs of preparatory work and operations performed by the Contractor that are not defined as a part of a payment item. Payment for Mobilization will be made on the following basis.
   a. 30% after completion of 5% of the total contract amount of bid items 2 through 6 have been earned.
   b. 30% after completion of 30% of the total contract amount of bid items 2 through 6 have been earned.
   c. 40% after completion of all work on bid items 2 through 6 been completed and as defined as Substantial Completion.

   1. Item Description: Work shall include design, installation, maintenance and removal of trench shoring and sheeting as required. This item includes all tools, equipment and materials as well as any incidental work necessary for safe installation and operation of trench safety systems for deep excavations as described in the Specifications.
   2. Measurement: Shall be measured by the Lump Sum (LS).
   3. Payment: Shall be paid at the applicable contract lump sum price, Payment for trench safety systems will be made on the following basis.
      a. 30% after completion of 5% of the total contract amount of bid item 6 has been earned.
      b. 30% after completion of 50% of the total contract amount of bid item 6 has been earned.
      c. 40% after removal of all trench safety systems for the East Sitcum Terminal Stormwater work.

C. Export and Dispose of Unsuitable Soil, Bid Item 3.
   1. Item Description: Work includes loading, transport and disposal in an approved Subtitle D landfill of soil determined by the engineer to be unsuitable for reuse on site.
   2. Measurement: Shall be measured by the ton based on certified truck weight tickets to the Engineer generated at the time of disposal.
   3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.

D. Import Clean Backfill, Bid Item 4.
   1. Item Description: Work includes procurement, transport, delivery and stockpiling of “Gravel Backfill” as described in the Specifications.
   2. Measurement: Shall be measured by the ton based on certified truck weight tickets to the Engineer generated at the time of delivery.
   3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.

E. CDF for Trench Backfill, Bid Item 5.
1. Item Description: Work includes procurement, transport, delivery and placing of “CDF for Trench Backfill” as described in the Specifications.

2. Measurement: Shall be measured by the cubic yard (CYD) based on the amount placed.

3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.

F. All other Work, Bid Item 6.
   1. Item Description: The Work includes completion of all work, as shown on the drawings and as defined in the specifications, that is not specifically identified or included in other bid items. This includes but is not limited to health and safety requirement, temporary erosion and sediment control, Construction stormwater pollution control requirements, demolition, trenching, hauling, stockpiling, maintenance of stockpiles, dewatering and water disposal, pipe procurement and installation, modifications to drainage structures, placement and compaction of trench backfill, paving, joint sealing, striping and any other incidental work not specifically mentioned.

   2. Measurement: Shall be measured based on the percentage complete for the overall Lump Sum (LS) amount.

   3. Payment: This item will be paid for at the Contract lump sum price as specified in the Contractor’s submitted Bid in accordance with the approved Schedule of Values.

1.08 NORTH INTERMODAL YARD (NIM) STORMWATER TREATMENT PAYMENT ITEMS

A. Mobilization and Demobilization, Bid Item 7.
   1. The total amount for all mobilization cost shall not exceed 5% of the sum total for bid items Number 8 through 13.

   2. Item Description: work and operations performed by the Contractor including, but not limited to, completion and submittal and approval of the following:
      a. All bonds and insurance certificates
      b. Construction Site Safety and Security Plan (CSSP)
      c. Initial Submittal Schedule
      d. Schedule of Values
      e. Detailed CPM progress schedule
      f. Pre-construction photographs and video
      g. Pre-construction submittals
      h. Establishing Contractor’s Project Manager, Superintendent, and other required specified personnel on the Work site full time.
      i. Furnishing and installing all temporary facilities and controls as needed for the safe and proper completion of the work, including utilities, sanitary facilities, barriers and enclosures, fences, staging and entrance areas, and field offices, as specified.
      j. Mobilization onto the site required in support of the Contractor’s first 30 days of operations.
      k. As-built drawings
3. Measurement: Shall be measured by the lump sum (LS).

4. Payment is for Mobilization of construction equipment and costs of preparatory work and operations performed by the Contractor that are not defined as a part of a payment item. Payment for Mobilization will be made on the following basis.
   a. 30% after completion of 5% of the total contract amount of bid items 8 through 13 have been earned.
   b. 30% after completion of 30% of the total contract amount of bid items 8 through 13 have been earned.
   c. 40% after completion of all work on bid items 8 through 13 been completed and as defined as Substantial Completion.

   1. Item Description: Work shall include design, installation, maintenance and removal of trench shoring and sheeting as required. This item includes all tools, equipment and materials as well as any incidental work necessary for safe installation and operation of trench safety systems for deep excavations as described in the Specifications.
   2. Measurement: Shall be measured by the Lump Sum (LS).
   3. Payment: Shall be paid at the applicable contract lump sum price. Payment for trench safety systems will be made on the following basis.
      a. 30% after completion of 5% of the total contract amount of bid items 12 and 13 have been earned.
      b. 30% after completion of 50% of the total contract amount of bid items 12 and 13 have been earned.
      c. 40% after removal of all trench safety systems for the NIM Stormwater Treatment work.

C. Export and Dispose of Unsuitable Soil, Bid Item 9.
   1. Item Description: Work includes loading, transport and disposal in an approved Subtitle D landfill of soil determined by the engineer to be unsuitable for reuse on site.
   2. Measurement: Shall be measured by the ton based on certified truck weight tickets to the Engineer generated at the time of disposal.
   3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.

D. Import Clean Backfill, Bid Item 10.
   1. Item Description: Work includes procurement, transport, delivery and stockpiling of “Gravel Backfill” as described in the Specifications.
   2. Measurement: Shall be measured by the ton based on certified truck weight tickets to the Engineer generated at the time of delivery.
   3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.
E. CDF for Trench Backfill, Bid Item 11.
   1. Item Description: Work includes procurement, transport, delivery and placing of “CDF for Trench Backfill” as described in the Specifications.
   2. Measurement: Shall be measured by the cubic yard (CYD) based on the amount placed.
   3. Payment: This item will be paid for at the contract unit price stated on the Bid Form. The price shall be full compensation for furnishing all labor, equipment, materials and incidentals necessary for the work.

F. Stormwater Treatment System, Bid Item 12
   1. Item Description: Work shall include design, manufacture, transport, installation, and commissioning of stormwater treatment system as indicated in the drawings and specifications for “Inline Stormwater Treatment Facilities” and “Concrete Structure Coatings”. Work includes all vaults, lids, access ports, and filters necessary for a complete and operational system.
   2. Measurement: Shall be measured by the Lump Sum (LS).
   3. Payment: Shall be paid at the applicable contract lump sum price, Payment for Stormwater Treatment System will be made on the following basis.
      a. 30% after completion of all submittals and delivery of the system to the project site.
      b. 50% after installation of the unit and stabilization of the surrounding site.
      c. 20% after cleaning, activation and commissioning of the system including written confirmation from the manufacturer of contractor compliance with all system operational requirements.

G. All other Work, Bid Item 13.
   1. Item Description: The Work includes completion of all work, as shown on the drawings and as defined in the specifications, that is not specifically identified or included in other bid items. This includes but is not limited to health and safety requirements, temporary erosion and sediment control, construction stormwater pollution control requirements, demolition, trenching, hauling, stockpiling, maintenance of stockpiles, dewatering and water disposal, drainage structure procurement and installation, pipe procurement and installation, modifications to drainage structures, placement and compaction of trench backfill, paving, joint sealing and striping and any other incidental work not specifically mentioned.
   2. Measurement: Shall be measured based on the percentage complete for the overall Lump Sum (LS) amount.
   3. Payment: This item will be paid for at the Contract lump sum price as specified in the Contractor’s submitted Bid in accordance with the approved Schedule of Values.

PART 2 - PRODUCTS - NOT USED
PART 3 - PRODUCTS - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for substitutions.

1.02 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

B. The contract documents include performance specifications for products and equipment which meet project requirements. In those cases where a representative item or manufacturer is named in the specification, it is provided for the sole purpose of identifying a product meeting the required functional performance. Where the words “or equal” are used a substitution request as further described is not required.

C. Where non-competitive or sole source products or manufacturers are explicitly specified with the words “or approved equal,” or “Engineer approved equal,” or “as approved by the Engineer” are used, they shall be taken to mean “or approved equal.” In these cases a substitution request as further described in this section, is required.

1.03 SUBMITTALS

A. Post-Award Substitution Requests must be submitted by the Contractor and not a subcontractor or supplier.

1. Substitution Request Form: Use a copy of form located in Section 00 63 25.

2. Documentation: Show compliance with requirements for substitutions with the following, as applicable:
   a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
   b. Coordination information, including a list of changes or modifications needed to other parts of the Work that will be necessary to accommodate proposed substitution.
   c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable specification section. Significant qualities may include, but are not limited to, attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
   d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
   e. Samples, where applicable or requested.
   f. Certificates and qualification data, where applicable or requested.
   g. List of similar installations for completed projects with project names, and addresses. Also provide names and addresses of the A/E and Owners.
   h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
   i. Research reports evidencing compliance with building code in effect for project.
j. Comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.

k. Cost information, including a proposal of change, if any, in the Contract Sum.

l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.

m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Engineer's Action: If necessary, Engineer will request additional information or documentation for evaluation within 7 calendar days of receipt of a request for substitution. Engineer will notify Contractor through Port of acceptance or rejection of proposed substitution within 15 calendar days of receipt of request, or 7 calendar days of receipt of additional information or documentation, whichever is later.

a. Forms of Acceptance: Change Order or Minor Change in Work.

b. Use product originally specified if Engineer does not issue a decision on use of a proposed substitution within time allocated.

B. Substitutions will not be considered when:

1. Indicated or implied on shop drawings or product data submittals without formal request submitted in accordance with this Section.

2. Submittal for substitution request has not been reviewed and approved by Contractor.

3. Acceptance will require substantial revision of Contract Documents or other items of the Work.

4. Submittal for substitution request does not include point-by-point comparison of proposed substitution with specified product.

1.04 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage qualified testing agency to perform compatibility tests recommended by manufacturers.

PART 2 - PRODUCTS

2.01 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests for substitution immediately upon discovery of need for change, but not later than 7 days prior to date required for preparation and review of related submittals.

1. Conditions: Engineer will consider Contractor's request for substitution when the following conditions are satisfied:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Requested substitution will not adversely affect Contractor's construction schedule.

c. Requested substitution has received necessary approvals of authorities having jurisdiction.

d. Requested substitution is compatible with other portions of the Work.

e. Requested substitution has been coordinated with other portions of the Work.

f. Requested substitution provides specified warranty.

g. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Engineer will consider Contractor's requests for substitution if received within 7 days after the Notice of Award.

1. Conditions: Engineer will consider Contractor's request for substitution when the following conditions are satisfied:

   a. Requested substitution offers Port a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Port must assume. Port's additional responsibilities may include compensation to Engineer for redesign and evaluation services, increased cost of other construction by Port, and similar considerations.

   b. Requested substitution does not require extensive revisions to the Contract Documents.

   c. Requested substitution is consistent with the Contract Documents and will produce indicated results.

   d. Requested substitution will not adversely affect Contractor's construction schedule.

   e. Requested substitution has received necessary approvals of authorities having jurisdiction.

   f. Requested substitution is compatible with other portions of the Work.

   g. Requested substitution has been coordinated with other portions of the Work.

   h. Requested substitution provides specified warranty.

   i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY
   A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

1.02 SUBMITTALS
   A. The Contractor shall submit the following documentation to the Port within ten (10) days of Notice to Proceed:
      1. List of Labor Rates
         a. For the Contractor and each subcontractor, a list of labor rates for each trade applicable to the scope of work to be performed. These submitted rates shall be broken down to include the base wage, fringes, FICA, SUTA, FUTA, industrial insurance and medical aid premiums as stated in the General Conditions. The rates shall not contain any travel time, safety, loss efficiency factors, overhead or profit. Rates shall be submitted for straight time, overtime and double time in a form acceptable to the Engineer. Contractor shall provide proof of all labor rate costs as required by the Engineer including the submission of a copy of the most current Workers Compensation Rate Notice from Labor & Industries and a copy of the Unemployment Insurance Tax Rate notice from the Employment security department.
      2. List of Equipment.
         a. Submit for the Contractor and each subcontractor, a list of equipment and rates applicable to the scope of work to be performed. The equipment rates shall conform to the rates shown on Equipment Watch. A separate page from equipment watch detailing the hourly rate shall be submitted as backup documentation for each piece of equipment.
      3. No applications for payment or change orders will be processed for the Contractor until labor and equipment rates have been submitted and approved.

1.03 METHOD TO CALCULATE ADJUSTMENTS TO CONTRACT PRICE
   A. One of the following methods shall be used:
      1. Unit Price Method;
      2. Firm Fixed Price Method (Lump Sum); or,
   B. The Port preferred methods are firm fixed price or unit prices.

1.04 MINOR CHANGES IN THE WORK
   A. Engineer will issue a written directive authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time.

1.05 PROPOSAL REQUESTS
   A. Port-Initiated Proposal Requests: The Engineer will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
      1. Work Change Proposal Requests issued by Engineer are not instructions either to stop work in progress or to execute the proposed change.
2. Contractor shall submit a written proposal within the time specified in the General Conditions. The proposal shall represent the Contractor’s offer to perform the requested work, and the pricing set forth within the proposal shall represent full, complete, and final compensation for the proposed change and any impacts to any other Contract Work, including any adjustments in the Contract Time.

   a. Include a breakdown of the changed work in sufficient detail that permits the Engineer to substantiate the costs.

      1) Generally, the cost breakdown should be divided into the time and materials categories listed in the General Conditions under Article 8.02.B for either Lump Sum Proposals or Force Account Proposals.

      2) For Unit Price Proposals, include the quantity and description of all work involved in the unit pricing being proposed, along with a not to exceed total cost.

   b. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

B. Contractor-Initiated Proposals: If latent or differing site conditions require modifications to the Contract, the Contractor may initiate a claim by submitting a request for a change to the Engineer.

   1. Notify the Engineer immediately upon finding differing conditions prior to disturbing the site.

   2. Provide follow-up written notification and differing site conditions proposal within the time frames set forth in the General Conditions.

   3. Provide the differing site condition change proposal in the same or similar manner as described above under 1.04.A.

   4. Comply with requirements in Section 01 25 00 Substitution Procedures During Construction if the proposed change requires substitution of one product or system for product or system specified.

   5. Proposal Request Form: Use form acceptable to Engineer.

1.06 PROCEEDING WITH CHANGED WORK

A. The Engineer may issue a directive instructing the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order per the General Conditions, Article 8.01.E.

   1. The directive will contain a description of change in the Work and a not-to-exceed amount. It will designate the method to be followed to determine the change in the Contract Sum or the Contract Time.

1.07 CHANGE ORDER PROCEDURES

A. Issuance of Change Order

   1. On approval of the Contractor’s proposal, and following successful negotiations, the Engineer will issue a Change Order for signature by the Contractor and execution by the Engineer.

      a. The Contractor shall sign and return the Change Order to the Engineer within four (4) days following receipt of the Change Order from the Engineer. If the Contractor fails
to return the signed Change Order within the allotted time, the Engineer may issue a Unilateral Change Directive.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY
A. This section includes specifications for preparation, format, and submittal of Schedule of Values.
B. The Schedule of Values will establish unit prices for individual items of work.
C. The Schedule of Values will be the basis for payment of contract work.

1.02 PREPARATION
A. To facilitate monthly pay requests, develop the Schedule of Values based on the Contractor’s submitted Bid. The schedule of Values shall be used to provide an allocation of the Work for measurement and payment to a level of detail to ensure accurate payment for the Work accomplished.
B. Obtain the agreement of the Engineer on the Schedule of Values. No payment will be made prior to an agreed upon Schedule of Values.
C. Include an updated version of the Schedule of Values as changes occur. Update the Schedule of Values to include:
   1. Dollars earned and percent complete for the current progress payment period.
   2. Dollars earned and percent complete to-date, excluding the current progress payment period.
   3. Total dollars earned and percent complete to-date.
   4. Total dollars remaining
   5. Changes resulting from Change Orders
D. The total value of the line items in the Schedule of Values plus any approved Change Orders shall be equal to the current approved contract price.
E. The value of stored material shall be identified in the Schedule of Values with both a material-purchase activity and a separate corresponding installation activity in the Construction Schedule(s).
F. Include as exhibits, drawings or sketches as necessary, to better define the limits of pay items that are in close proximity and that have no clear boundary in the Contract Drawings.

1.03 SUBMITTAL
A. Submit preliminary Schedule of Values within 10 days of the effective date of the Notice to Proceed.
B. Submit corrected Schedule of Values within 10 days upon receipt of reviewed Schedule of Values.
C. At the Engineer’s request, submit documentation substantiating the cost allocations for line items within the Schedule of Values.
PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 SCHEDULE OF VALUES

A. Submit the Schedule of Values in a form acceptable to the Engineer.

B. Provide updated Schedule of Values as required by the Engineer and as indicated in the Contract Documents.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The purpose of this section is to provide the framework for communication between the Port and the Contractor by defining the types and timing of administrative tasks, including meetings and other items related to communications.

1.02 NOTICE TO PROCEED

A. Contract execution will be made per the requirements of the Contract Documents. Once the contract has been executed and all pre-work submittals have been received, the Engineer will issue a Notice to Proceed (NTP).

1. In certain instances, the Engineer may issue to the Contractor a Limited NTP for specified elements of the work described in these Contract Documents.

B. The Contractor shall submit all pre-work submittals within 14 days of contract execution.

1. No contract time extension shall be granted for any delays in issuance of the NTP by the Engineer due to the Contractor's failure to provide acceptable submittals required by the Contract Documents.

1.03 COORDINATION

A. The Contractor shall coordinate all its activities through the Engineer.

B. The Contractor shall coordinate construction operations as required to execute the Work efficiently, to obtain the best results where installation of one part of the Work depends on other portions.

1.04 PROJECT MEETINGS

A. Pre-Construction Meeting

1. After execution of the contract, but prior to commencement of any work at the site, a mandatory one time meeting will be scheduled by the Engineer to discuss and develop a mutual understanding relative to the administration of the safety program, change orders, RFI’s, submittals, scheduling prosecution of the work. Major subcontractors who will engage in the work shall attend.

2. Location of the Pre-Construction Meeting will be held at the Port of Tacoma Administration Building located at One Sitcum Plaza.

B. Weekly Progress Meetings – Progress meetings include the Contractor, Engineer, consultants and others affected by decisions made.

1. The Engineer will arrange meetings, prepare standard agenda with copies for participants, preside at meetings, record minutes and distribute copies within ten working days to the Contractor, meeting participants, and others affected by decisions made.

2. Attendance is required for the Contractor's job superintendent, major subcontractors and suppliers, Engineer, and representatives of the Port as appropriate to the agenda topics for each meeting.

3. Standard Agenda

   a. Review minutes of previous meeting.

   b. Review of work progress.
c. Field observations, problems, and decisions.
d. Identification of problems that impede planned progress.
e. Maintenance of Progress Schedule (3 weeks ahead; 1 week back).
f. Corrective measures to regain projected schedules.
g. Planned progress during succeeding work period.
h. Coordination of projected progress.
i. Maintenance of quality and work standards.
j. Effect of proposed changes on progress schedule and coordination.
k. Demonstration that the project record drawings are up-to-date.
l. Other business relating to the work.

C. Cost Meeting

1. A separate cost meeting may be set up by the Engineer to discuss RFI's (or any other issues) that may cause scope, schedule, or monetary changes to the contracts in more detail than necessary at the progress meeting. The Engineer will arrange, host, and provide an agenda for cost meetings. Attendees would include the Engineer, Contractor's job superintendent, and others as invited.

PART 2 - PRODUCTS - NOT USED
PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 DESCRIPTION

A. The Port and Contractor shall use the Port Contract Management application (e-Builder®) for electronic information exchange throughout the duration of the Contract as later described.
   1. e-Builder® is a web-based application accessed via the web.
   2. The Contractor will receive up to two separate user accounts for access to e-Builder®.
   3. The joint use of this system is to facilitate and coordinate the electronic exchange of Requests for Information, Submittals, Change Order Proposals, Pay Applications, and project specific correspondence.

1.02 USER ACCESS LIMITATIONS

A. Contractor’s access to e-Builder® is granted and controlled by the Engineer.
   1. The users assigned by the Contractor to use e-Builder® shall be competent and experienced with the practices commonly employed in the industry for electronically submitting requests for information, submittals, product data, shop drawings, and related items as required by the contract and the methods commonly used for project correspondence transmission and filing.
   2. Any users assigned by the Contractor whom the Engineer determines is incapable of performing the prescribed tasks in an accurate, competent, and efficient manner will be removed upon request from the Engineer. The qualifications and identity of a replacement user shall be submitted within 24 hours for consideration by the Engineer. Once accepted by the Engineer, the user account will be modified accordingly.

1.03 CONTRACTOR TECHNOLOGY REQUIREMENTS

A. The Contractor is responsible for providing and maintaining web enabled devices capable of running the desktop version of the e-Builder® website effectively.

1.04 CONTRACTOR SOFTWARE REQUIREMENTS

A. The Contractor is responsible for providing and maintaining the following:
   1. An office suite that is Microsoft Office 2013 compatible for generation and manipulation of correspondence.
   2. A program capable of editing, annotating, and manipulating Adobe pdf files for inserting the Contractor’s review stamp, clouding, and adding notation to the files as necessary for review by the Engineer.

1.05 CONTRACTOR RESPONSIBILITY

A. Provide all the equipment, internet connections, software, personnel, and expertise required to support the use of e-Builder® as described in the Contract documents.

1.06 PORT RESPONSIBILITY

A. Provide the Contractor with the following:
   1. All forms necessary for application to obtain permissions to access e-Builder® as described above.
   2. Information, basic user guides, and requirements on methods for using e-Builder®.
   3. Instruction for the Contractor’s staff utilizing e-Builder®.
PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 UTILIZATION OF E-BUILDER®

A. The Contractor shall provide required information in a timely manner that also supports the project schedule and meets the requirements of the Contract.

B. The Contractor shall provide and maintain competent and qualified personnel to perform the various tasks required to support the work within e-Builder®.

C. The Port will not be liable for any delays associated from the usage of e-Builder® including, but not limited to, slow response time, Port maintenance and off-line periods, connectivity problems, or loss of information. Under no circumstances shall the usage of e-Builder® software be grounds for a time extension or cost adjustment to the contract.

END OF SECTION
PART 1 GENERAL

1.01 SECTION INCLUDES

A. Preliminary schedule.
B. Construction progress schedule, bar chart type.

1.02 SUBMITTALS

A. Within 10 days following execution of the contract, submit preliminary baseline schedule defining planned operations.
B. If the preliminary baseline schedule requires revision after review, submit revised baseline schedule within 10 days.
C. Within 20 days after review of preliminary baseline schedule, submit draft of proposed complete baseline schedule for review.
D. Submit updated progress schedule monthly to the Engineer with each Pay Application.

1.03 QUALITY ASSURANCE

A. Scheduler: Contractor's personnel or Consultant specializing in CPM scheduling with one year’s minimum experience in scheduling construction work of a complexity comparable to this Project, and having use of computer facilities capable of delivering a detailed graphic printout within 48 hours of request.

1.04 SCHEDULE FORMAT

A. The baseline project schedule shall be produced using the Critical Path Method (CPM) format.
B. Listings: In chronological order according to the start date for each activity. Identify each activity with the applicable specification section number.
C. Sheet Size: Multiples of 11 x 17 (280 x 432 mm).

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 BASELINE SCHEDULE

A. Prepare preliminary schedule in the form of a horizontal bar chart.
B. The baseline project schedule shall include all the activities listed in the Schedule of Values and be directly related to items listed in the Bid Form. The Contractor is encouraged to add sufficient activities to facilitate a clear understanding of the means and methods planned for the various work items.
C. Show complete sequence of construction by activity, with dates for beginning and completion of each element of construction and critical path. At a minimum it shall include and show the following:
   1. A time scale showing the elementary work items needed to complete the work.
   2. Estimated time durations for each activity, defined as any single identifiable work step within the project.
   3. A graphical network diagram showing the logical sequence of activities, their precedence relationships, and estimated float or leeway available for each.
4. The different categories of work as distinguished by crew requirements, equipment requirements, and construction materials.

5. The different areas of responsibility, such as distinctly separate or subcontracted work, and identifiable subdivisions of work.

D. It shall be maintained and updated as necessary to accurately reflect past progress and the most probable future progress

E. Activities shown shall include submittals, milestones, sufficient task breakdown for major components of work.

F. Identify work of separate stages and other logically grouped activities.

G. Provide sub-schedules to define critical portions of the entire schedule.

H. Provide separate schedule of submittal dates for shop drawings, product data, and samples, owner-furnished products, products identified, and dates reviewed submittals will be required from the Engineer. Indicate decision dates for selection of finishes.

3.02 PROGRESS SCHEDULE

A. From the regularly-maintained baseline project schedule, progress schedules showing a three-week look-ahead, one-week look-back, shall be submitted and distributed at the weekly progress meetings. The progress schedule shall represent a practical plan to complete the work shown within the contract work window presented. At a minimum, the presentation, typically a Gantt-style chart, shall convey the task durations, a logical work sequence, task interdependencies, and identify important or critical constraints.

B. Submittal and distribution of progress schedules will be understood to be the Contractor's representation that the scheduled work meets the requirements of the contract documents and that the work will be executed in the manner and sequence presented, and over the durations indicated.

C. The scheduling, coordination, and execution of construction in accordance with the contract documents are the responsibility of the Contractor. The Contractor shall involve, coordinate, and resolve scheduling with all subcontractors, material suppliers, or others affected in development of the progress schedules.

D. The progress schedule shall be used for coordination purposes for inspection and testing purposes as well as validation of work progress against the baseline schedule.

3.03 UPDATING SCHEDULE

A. Maintain schedules to record actual start and finish dates of completed activities.

B. Indicate progress of each activity to date of revision, with projected completion date of each activity.

C. Identify activities modified since previous submittal, major changes in Work, and other identifiable changes.

D. Indicate changes required to maintain Date of Substantial Completion.

E. Submit reports required to support recommended changes.

END OF SECTION
PART 1 - GENERAL

1.01 DESCRIPTION OF WORK

A. The work includes the requirements to provide a submittal log and project submittals.

1.02 SUBMITTAL LOG

A. Contractor shall, within 5 days prepare and submit for Engineer approval a detailed log of all the submittals required under this Contract, along with any other submittals identified by the Port or Contractor. The log shall include, but not be limited to, schedules, required construction work plans, equipment and material cut sheets, shop drawings, project record documents, test results, survey records, record drawings, results of QC testing, and all other items for which a submittal is required. The submittal log shall be organized by CSI Specification Division, and Section number and include the following information:

1. Submittal Number
2. Item identification
3. Scheduled submittal date, date returned, date approved
4. Date submittal or material is needed
5. After the submittal log is reviewed and approved by the Engineer, it shall become the basis for the submittal of all items by Contractor.

1.03 COMPLIANCE

A. Failure to comply with these requirements shall be deemed as the Contractor's agreement to furnish the exact materials specified or materials selected by the Engineer based on these specifications.

1.04 SHOP DRAWINGS AND MANUFACTURERS' LITERATURE

A. The Port will not accept shop drawings that prohibit the Port from making copies for its own use.

B. Shop drawings shall be prepared accurately and to a scale sufficiently large to indicate all pertinent features of the products and the method of fabrication, connection, erection, or assembly with respect to the work.

C. All drawings submitted to the Engineer for approval shall be drawn to scale as ANSI D.

D. Required electronic formats for these drawings are as follows:

1. AutoCad DWG
2. PDF - Formatted to print to half-scale using 11x17 paper

E. Catalog cuts or brochures shall show the type, size, ratings, style, color, manufacturer, and catalog number of each item and be complete enough to provide for positive and rapid identification in the field. General catalogs or partial lists will not be accepted. Manufacturers' original electronic files are required for submitting.

1.05 SUBMITTAL REVIEW

A. After review of each of Contractor's submittals, the submittal will be returned to Contractor with a form indicating one or more of the following:

1. No Exceptions Taken - Means, accepted subject to its compatibility with future submittals and additional partial submittals for portions of the work not covered in this submittal. But it
does not constitute approval or deletion of specified or required items not shown in the partial submittal.

2. Make Corrections Noted - Same as Item 1, except that minor corrections as noted shall be made by Contractor.

3. Reviewed - Submittal has been reviewed by the Port. Review does not constitute approval, and the Contractor is responsible for requirements in submittal.

4. Review as Noted - Submittal has to be reviewed by the Port with comments as noted.

5. Revise and Resubmit - Means, rejected because of major inconsistencies or errors. Resolve or correct before next submittal.

6. Rejected - Means, submitted material does not conform to the Contract Documents in a major respect (e.g., wrong material, size, capacity, model, etc.).

B. Submittals marked "No Exceptions Taken," "Make Corrections Noted," or “Reviewed as Noted” authorizes Contractor to proceed with construction covered by those data sheets or shop drawings with corrections, if any, incorporated.

C. When submittals or prints of shop drawings have been marked "Revise and Resubmit" or "Rejected," Contractor shall make the necessary corrections and submit required copies. Every revision shall be shown by number, date, and subject in a revision block, and each revised shop drawing shall have its latest revision numbers and items clearly indicated by clouding around the revised areas on the shop drawing.

D. Submittals authorized by the Engineer do not in any case supersede the Contract Documents. The approval by the Engineer shall not relieve the Contractor from responsibility to conform to the Drawings or Specifications, or correct details when in error, or ensure the proper fit of parts when installed. A favorable review by the Port of shop drawings, method of work, or information regarding material and equipment Contractor proposes to furnish shall not relieve Contractor of its responsibility for errors therein and shall not be regarded as assumption of risk or liability by the Port or its officers, employees, or representatives. Contractor shall have no claim under the Contract on account of failure or partial failure, or inefficiency or insufficiency of any plan or method of work, or material and equipment so accepted. Favorable review means that the Port has no objection to Contractor using, upon its own full responsibility, the plan or method of work proposed, or furnishing the material and equipment proposed.

E. It is considered reasonable that the Contractor’s submittals shall be complete and acceptable by at least the second submission of each submittal. The Port reserves the right to deduct monies from payments due Contractor to cover additional costs for review beyond the second submission.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 PREPARATION OF SUBMITTALS

A. The Contractor shall submit all shop drawings, catalog cuts, brochures, and physical samples using e-Builder® (a web based construction management software). All post-document-generated notations such as notes, arrows, stamps, clouding, or other items, are required to be shown directly on the submittal document. Each submittal shall be accompanied by a transmittal developed within the e-Builder® software.
B. A separate submittal shall be prepared for each product or procedure and shall be further identified by referencing the Specification Section and paragraph number, and each submittal shall be numbered consecutively.

C. Product submittals that cannot be accomplished electronically shall be submitted electronically without attachments, marked as being hand delivered, and accompanied by a printed version of a transmittal.

D. Shop and detail drawings shall be submitted in related packages. All equipment or material details which are interdependent, or are related in any way, must be submitted indicating the complete installation. Submittals shall not be altered once marked “No Exceptions Taken.” Revisions shall be clearly marked and dated. Major revisions must be submitted for approval.

E. The Contractor shall thoroughly review all shop and detail drawings, prior to submittal, to assure coordination with other parts of the work.

F. Components or materials which require shop drawings, and which arrive at the job site prior to approval of shop drawings, shall be considered as not being made for this project and shall be subject to rejection and removal from the premises.

G. All submittal packages including, but not limited to, product data sheets, mix designs, shop drawings, and other required information for submittal must be submitted, reviewed, and approved before the relevant scheduled task may commence. It is the responsibility of the Contractor to provide the submittal information which may drive a task on the construction schedule to submit items well enough in advance as to provide adequate time for review and comment from the Engineer without adversely impacting the construction schedule.

H. When completing the e-Builder® submittal form, a Date Due field is required to be completed. This field is intended to inform the Port of the urgency of the submittal. Failure of the Port to return the submittal by the date provided by the Contractor will not be considered grounds for a contract time extension.

3.02 PRE-WORK SUBMITTALS

A. Prior to issuance of Notice to Proceed, the following submittals must be submitted and accepted:
   1. Per 00 72 00, Progress Schedule
   2. Per 00 73 46, Intent to Pay Prevailing Wages
   3. Per 00 73 63, Emergency Contact Numbers
   4. Per 00 73 63, 100% TWIC Site - Proof of Compliance
   5. Per 01 35 29, Health and Safety Plan (HASP)
   6. Per 01 35 29, Spill Prevention and Countermeasures Plan (SPCC)
   7. Per 01 35 47, List of Equipment and EPA emissions Certification Letter

B. Per 01 29 73, prior to the first pay application being processed, the Schedule of Values must be submitted and accepted.

C. Per 01 35 43.19, prior to the start of excavation, the Contractor shall submit a Soils Management Plan.

D. Per 01 57 13, prior to the first task in the field may begin, the Construction SWPPP must be submitted and accepted.
3.03 MAINTENANCE OF SUBMITTAL LOG

A. Prepare, and submit for Port review, a detailed submittal log conforming to the requirements of paragraph 1.02 of this section. When approved by the Engineer use the submittal log to track the transmittal of submittals to the Engineer, the receipt of submittal comments from the Engineer, and all subsequent action with respect to each submittal. Provide an updated copy of the submittal log to the Engineer during each weekly progress meeting, unless otherwise approved by the Engineer.

END OF SECTION
PART 1 - GENERAL

1.01 DESCRIPTION OF WORK

A. The work includes the requirements for health and safety provisions necessary for all work at the site for this project. The work also includes compliance with all laws, regulations, and ordinances with respect to safety, noise, dust, fire and police action, civil disobedience, security, or traffic.

B. Some of the work tasks may place workers in the potential position of coming into contact with environmental media.

C. The Contractor shall monitor site conditions for indications of identified and other potentially hazardous, dangerous, and/or regulated materials (suspicious material). Indicators of suspicious material include, but are not limited to, oily sheen or coloring on soil or water, or oily or chemical odors. If suspicious materials are encountered, the Contractor shall stop all work in that area and notify the Engineer immediately.

1.02 SUBMITTALS

A. Prior to the start of any Work, the Contractor shall provide a site specific Health and Safety Plan (HASP), which meets all the requirements of local, state, and federal laws, rules, and regulations. The HASP shall address all requirements for general health and safety and shall include, but not be limited to:

1. Description of work to be performed and anticipated chemical and/or physical hazards associated with the work.

2. Map of the site(s) illustrating the location of the anticipated hazards and areas of control for those hazards (including containments, exclusion/work zones, and contaminant reduction/decontamination zones).

3. Hazardous material inventory and safety data sheets (SDSs) for all chemicals which will be brought on site.

4. Signage appropriate to warn site personnel and visitors of anticipated site hazards.

5. Documentation that the necessary workers have completed the required Hazardous Waste Operations and Emergency Response (HAZWOPER) training.

6. Engineering controls/equipment to be used to protect against anticipated hazards.

7. Personal protective equipment and clothing including head, foot, skin, eye, and respiratory protection.

8. Procedures which will be used for:
   a. Trenching and shoring;
   b. Oxygen deficient conditions;
   c. Suspicious materials and/or unidentified materials
   d. Confined-space entry (could include dewatering storage tanks, manholes, or other items);
   e. Confined-space rescue;

9. Site housekeeping procedures and personal hygiene practices.

11. Administrative controls.
12. Emergency plan including locations of, and route to, nearest hospital.
13. Recordkeeping including:
   a. Documentation of appropriate employee training (e.g., Hazardous Waste Operations and Emergency Response [HAZWOPER] 40-hour training for staff involved with excavation and handling of soil)
14. Name and qualification of person preparing the HASP and person designated to implement and enforce the HASP.
15. Name and qualifications for Certified Safety Professional (CSP) or Certified Industrial Hygienist (CIH) and a copy of the CIH's or CSP's certification and resume.
16. Excavation, stockpiling, and truck loading procedures.
17. Lighting and sanitation.
18. Signatory page for site personnel to acknowledge receipt, understanding, and agreement to comply with the HASP.

B. Prior to the start of any Work, the Contractor shall provide a site specific Spill Prevention, Control, and Countermeasures (SPCC) Plan, which meets all the requirements of local, state, and federal laws, rules and regulations.

C. Contractor may submit the HASP and SPCC Plan as one comprehensive document or may submit the plans as separate documents.

1.03 POTENTIAL CHEMICAL HAZARDS
A. Site Contaminants
   1. The Contractor must provide site workers with Hazard Communication standard information for potential site contaminants (in accordance with WAC 296-843). The Contractor shall ensure that all site workers are aware of and understand this information. Additional information shall also be provided by the Contractor, as necessary, to meet the Hazard Communication Standard and HASP requirements as noted in WAC 296-901-14010 and 296-843. Workers shall be instructed on basic methods or techniques to assist in detecting suspicious material.

B. Chemical hazards may also result from Contractor operations resulting in inadvertent release of fuel, oil, or other chemicals in a manner that would expose workers.

1.04 POTENTIAL PHYSICAL AND OTHER HAZARDS
A. The Work of the Contractor is described elsewhere in these specifications. Precautions to prevent all anticipated physical and other hazards, including heavy equipment, shall be addressed in the HASP.

B. Specific aspects of construction resulting in physical hazards anticipated for this project include, but are not limited to, the following:
   1. Major hazards associated with earthwork impacts from moving construction vehicles and trucks, noise, thermal stress, contact with unguarded machines, excavation hazards (i.e., cave-in, utility, etc.), strains from heavy lifting, and reduced visibility and communications difficulties in work area.
2. Operation of equipment, including excavators, loaders, and related equipment, presenting hazards of entrapment, ensnarement, and being struck by moving parts.

C. Other anticipated physical hazards:
   1. Heat stress, such as that potentially caused by impermeable clothing (may reduce the cooling ability of the body due to evaporation reduction).
   2. Cold stress, such as that potentially caused during times when temperatures are low, winds are high, especially when precipitation occurs during these conditions.
   3. Biological hazards, such as insect stings, or bites.
   4. Trips and falls.

PART 2 - PRODUCTS

2.01 SAFETY SIGNAGE
   A. The Contractor shall provide signage at strategic locations within the project site to alert jobsite workers and visitors of the remediation work, associated hazards, and required precautions.

2.02 PRODUCTS SPECIFIED FOR HEALTH AND SAFETY
   A. Provide the equipment and supplies necessary to support the work, as described in the site-specific HASP. Equipment and supplies may include but are not limited to:
      1. All chemicals to be used on site;
      2. A hazardous materials inventory and SDSs for the chemicals brought on site;
      3. Fencing and barriers;
      4. Warning signs and labels;
      5. Trenching equipment;
      6. Fire extinguishers;
      7. Personal protective equipment (hard hats, foot gear, skin, eye, and respiratory protection);
      8. Demolition equipment and supplies;
      9. Decontamination equipment and supplies;
     10. First aid equipment;
     11. Spill response and spill prevention equipment; and
     12. Field documentation logs/supplies.

PART 3 - EXECUTION

3.01 WORK AREA PREPARATION
   A. Contractor shall comply with health and safety rules, regulations, ordinances promulgated by the local, state, and federal government, the various construction permits, and other sections of the Contract Documents. Such compliance shall include, but not be specifically limited to, any and all protective devices, equipment and clothing; guards; restraints; locks; latches; switches; and other safety provisions that may be required or necessitated by state and federal safety regulations. The Contractor shall determine the specific requirements for safety provisions and
shall have inspections and reports by the appropriate safety authorities to be conducted to ensure compliance with the intent of the regulations.

B. Contractor shall inform employees, subcontractors, and their employees of the potential danger in working with any potentially regulated materials, equipment, soils, and groundwater at the project site.

1. The Contractor shall not proceed with jobsite activities that might result in exposure of employees to hazardous materials, until the HASP is reviewed by the Engineer.

C. All Contractor employees expected to work at the jobsite or individuals entering the jobsite shall read the Contractor HASP before they enter the jobsite, and will sign a statement provided by the Contractor that they have read and understand the HASP. A copy of the Contractor’s HASP shall be readily available at the site at all times the work is being performed.

D. The Contractor’s HASP shall be amended as needed by the CIH or CSP to include special work practices warranted by jobsite conditions actually encountered. Special practices could include provisions for decontamination of personnel and equipment, and the use of special equipment not covered in the initial plan.

E. Contractor shall perform whatever work is necessary for safety and be solely and completely responsible for conditions of the job site, including safety of all persons (including employees of the Engineer, Engineer’s Representative, and Contractor) and property during the Contract period. This requirement applies continuously and is not limited to normal working hours.

F. The Engineer’s review of the Contractor’s performance does not include an opinion regarding the adequacy of, or approval of, the Contractor’s safety supervisor, the site-specific HASP, safety program or safety measures taken in, on, or near the job site.

G. Accidents causing death, injury, or damage must be reported immediately to the Engineer and the Port Security Department in person or by telephone or messenger. In addition, promptly report in writing to the Engineer all accidents whatsoever arising out of, or in connection with, the performance of the Work whether on, or adjacent to, the site, giving full details and statements of witnesses.

H. If a claim is made by anyone against the Contractor or any subcontractor on account of any accident, the Contractor shall promptly report the facts in writing within 24 hours after occurrence, to the Engineer, giving full details of the claim.

3.02 SITE SAFETY AND HEALTH OFFICER

A. Contractor shall provide a person designated as the Site Safety and Health Officer, who is thoroughly trained in rescue procedures, has a minimum current 40-hour HAZWOPER certification (minimum), and is trained to use all necessary safety equipment, and air monitoring equipment. The person must be available and/or present at all times while work is being performed, and conduct testing, as necessary.

B. The Site Safety and Health Officer shall be empowered with the delegated authority to order any person or worker on the project site to follow the safety rules. Failure to observe these rules is sufficient cause for removal of the person or worker(s) from this project.

C. The Site Safety and Health Officer is responsible for determining the extent to which any safety equipment must be utilized, depending on conditions encountered at the site.
3.03 SPILL PREVENTION AND CONTROL

A. The Contractor shall be responsible for prevention, containment and cleanup of spilling petroleum, and other chemicals/hazardous materials used in the Contractor's operations. All such prevention, containment, and cleanup costs shall be borne by the Contractor.

B. The Contractor is advised that discharge of oil, fuel, other petroleum, or any chemicals/hazardous materials from equipment or facilities into state waters or onto adjacent land is not permitted under state water quality regulations.

C. In the event of a discharge of oil, fuel or chemicals/hazardous materials into waters, or onto land with a potential for entry into waters, containment and cleanup efforts shall begin immediately and be completed as soon as possible, taking precedence over normal work. Cleanup shall include proper disposal of all spilled material and used cleanup materials.

D. The Contractor shall, at a minimum, take the following measures regarding spill prevention, containment and cleanup:

1. Fuel hoses, lubrication equipment, hydraulically operated equipment, oil drums, and other equipment and facilities shall be inspected regularly for drips, leaks, or signs of damage, and shall be maintained and stored properly to prevent spills. Proper security shall be maintained to discourage vandalism.

2. All land-based chemical, oil, and products' storage tanks shall be diked, contained, and/or located so as to prevent spills from escaping into the water. Dikes and containment area surfaces shall be lined with impervious material to prevent chemicals or oil from seeping through the ground and dikes.

3. All visible floating sheen shall be immediately contained with booms, dikes, or other appropriate means and removed from the water prior to discharge into state waters. All visible spills on land shall be immediately contained using dikes, straw bales, or other appropriate means and removed using sand, sawdust, or other absorbent material, which shall be properly disposed of by the Contractor. Waste materials shall be temporarily stored in drums or other leak-proof containers after cleanup and during transport to disposal. Waste materials shall be disposed offsite in accordance with applicable local, state, and federal regulations.

4. In the event of any oil or product discharges into public waters, or onto land with a potential for entry into public waters, the Contractor shall immediately notify the Port Security at their listed 24-hour response number:

E. The Contractor shall maintain the following materials (as a minimum) at each of the project sites:

1. Oil-absorbent booms: 100 feet.

2. Oil-absorbent pads or bulk material, adequate for coverage of 200 square feet of surface area.

3. Oil-skimming system.

4. Oil dry-all, gloves, and plastic bags.

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY

A. This Section discloses procedures to follow if unknown regulated materials are encountered.

1.02 NOTIFICATION AND SUSPENSION

A. In the event the Contractor detects the presence of potentially regulated materials not previously identified in this specification, the Contractor shall stop work and immediately notify the Port. Following such notification by the Contractor, the Port shall in turn notify the various governmental and regulatory agencies concerned with the presence of regulated materials, if warranted. Depending upon the type of materials identified, the Port may suspend work in the vicinity of the discovery under the provisions of General Conditions.

1. Following completion of any further testing necessary to determine the nature of the materials involved, the Port will determine how the material shall be managed. Although the actual procedures used in resuming the work shall depend upon the nature and extent of the regulated material, the following alternate methods of operation are foreseen as possible:

   a. Contractor to resume work as before the suspension.

   b. Contractor to move its operations to another portion of the Work until measures to eliminate any hazardous conditions can be developed and approved by the appropriate regulatory agencies.

   c. The Port to direct the Contractor to dispose or treat the material in an approved manner.

   d. The Port to terminate or modify the Contract accordingly, for unforeseen conditions.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 DESCRIPTION OF WORK

A. Soils that cannot be reused onsite, and are anticipated to be exported to an off-site facility must have a completed soil profile prior to export. Contractor is responsible for collecting the appropriate data that satisfies the requirements of the receiving facility.

B. Soils excavated within the project area, as shown on the drawings, are anticipated to be free of regulated material; however, should the Contractor identify soil that cannot be reused as part of the project, the Contractor shall notify the Engineer to determine if the soil requires special handling.

   1. Soil with unexpected regulated material, as identified by visual and/or olfactory methods, shall be segregated from other excavated material until such time as appropriate testing and analysis will be completed by the Port. Upon completion of the soil profile, the Engineer will inform the Contractor of any special handling requirements based on the results.

   2. Soil beyond construction excavation limits will not require excavation unless free draining product is observed or other special conditions exist; in which case the Engineer will direct the Contractor in additional excavation. Soils determined to require special handling will be hauled and disposed of at an approved disposal facility.

C. No soil shall be removed from the site without prior notification to the Engineer. The notification shall include:

   1. An estimate of the number of truck-trips, the haul destination, and the period in which these trips will be made (e.g., 20 truck-trips to the Waste Management Facility over the two-week period beginning on March 1, 2012).

1.02 DEFINITIONS

A. Olfactory Indications (methods): Of or relating to the sense of smell. Soils containing petroleum and other volatile constituents typically exhibit characteristic odors that can be detected (and sometimes identified) by smell.

B. Regulated Material: Any chemical, physical, biological, or radiological substance that does not occur naturally in the environment, or that occurs at concentrations higher than natural background levels, and is regulated by agencies as to the disposal/recycling facility(ies) the material can and cannot go (i.e., EPA, Department of Ecology, Tacoma-Pierce County Health Department).

C. Soil (waste) Profile: A characterization of the chemical and physical properties of soil material designated for off-site disposal, including the presence of pollutants and their concentrations as measured by approved laboratory analytical methods. A profile is required by the receiving permitted disposal or recycling facility.

D. Special Handling: Refers to hauling and disposal of soils that cannot be reused in place as backfill or as general fill at another (off-site) location due to the presence of pollutants in concentrations above allowable limits. Such soils must be hauled to, and managed at, a permitted disposal facility.

E. Type A Regulated Soil: Soil that must be removed from the Project site and has been determined by the Engineer to contain pollutants in concentrations that exceed state or federal dangerous or hazardous designations (respectively), or other special Port-determined criteria. Type A Regulated Soil requires disposal at an approved Subtitle C hazardous waste landfill.
F. Type B Regulated Soil: Soil that must be removed from the Project site and has been
determined by the Engineer to contain pollutants in concentrations that are below dangerous or
hazardous levels, but could negatively impact the quality of air, waters of the state, soils or
sediments, or pose a threat to the health of humans or other living organisms, depending on
where the soil is disposed. Type B Regulated Soil requires disposal an approved Subtitle D
solid waste landfill.

G. Type C Regulated Soil: Soil that must be removed from the Project site and has been
determined by Engineer to contain unknown constituent(s) and/or in unknown concentration(s)
and requires further analysis and characterization. Type C Regulated soil will require disposal
at an approved Subtitle C hazardous waste landfill or Subtitle D solid waste landfill if additional
soil characterization indicates special handling is required.

H. Type D Soil: Soil determined by the Engineer not to require special handling with regard to this
Contract. Classification of material as Type D Soil by the Port is not a certification nor does it
release the Contractor of liability or obligation to meet any disposal or storage facility
acceptance or testing requirements.

I. Unexpected Regulated Material: Regulated material unexpectedly found in an excavation or in
other locations where there is no prior knowledge, information, or history to indicate possible
spills or releases of regulated material.

J. Visual Indications (methods): A preliminary evaluation of the potential presence of
contamination based on visual observation. For example, soils containing petroleum are
frequently discolored or stained relative to non-petroleum impacted native soils or clean fill.

1.03 HEALTH AND SAFETY

A. The Contractor is required to implement all health and safety provisions as required by
Specification 01 35 29 – Health, Safety and Emergency Response. These provisions include
any special monitoring, personal protective equipment, or work plans to accommodate
regulated soil or material special handling. Use of environmental characterization data may not
be appropriate for health and safety purposes.

1.04 SUBMITTALS

A. Prior to excavation of any subsurface materials, the Contractor shall submit a Soils
Management Plan to the Engineer. The Soils Management Plan must be approved by the
Engineer prior to any excavation of subsurface materials. The Soils Management Plan must
include the following:

1. Identification of all soil disposal facilities anticipated to be used for soils that are
determined to be Type A or Type B Regulated Soil.

2. Identification of all fill sites, disposal/recycling facilities and/or end uses anticipated to be
used for soil determined to be Type D Soil in accordance with paragraph 3.02 of this
section.

3. Contingency for delivery and placement of Type C Regulated Soil at an on-site soil
stockpile area.

4. Contingency for managing soil/debris encountered during excavation that may disqualify
soil for disposal or recycle at the anticipated facilities.

5. General description of how equipment operators, safety staff, and other applicable on-site
personnel will identify and respond to soil containing potentially regulated material.
6. Contractor shall coordinate with the Engineer to facilitate handling of regulated soil in accordance with this specification.

7. Description of all haul routes to be used on the project.

8. A completed soil profile prior to export to an off-site receiving facility.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 EXCAVATION/TESTING

A. The field-testing for soil to be exported offsite will be performed by the Port and will result in the following classification of material:

1. Type A Regulated Soil as defined in 1.02(E) of this Section
2. Type B Regulated Soil as defined in 1.02(F) of this Section
3. Type C Regulated Soil as defined in 1.02(G) of this Section
4. Type D Soil as defined in 1.02(H) of this Section

B. Contractor shall give Port no less than one week notice to sample export soil prior to disposal offsite.

C. Laboratory turnaround times may require additional time for analytical results; therefore, Contractor should coordinate with Engineer well in advance of anticipated disposal date. Samples that are required to have “rush” analysis performed due to the Contractor’s failure to disclose the anticipated disposal date shall have the difference in service fees paid by the Contractor, or the Contractor may delay the disposal until the standard analysis turnaround time is complete, at no additional cost to the Port.

3.02 TRANSPORTATION AND OFF-SITE DISPOSAL OF SOILS

A. The Contractor shall be responsible for handling, re-handling, loading, transporting, and legal off-site removal of all waste materials and excavated soils not reused onsite.

1. Contractor shall ensure that transport truck gross weight meets federal and/or state Department of Transportation (DOT) requirements and the requirements of the receiving facility, whichever is more stringent.

2. Contractor shall take measures to prevent debris from being spilled from trucks or tracked from the site to local streets. Contractor shall sweep streets adjacent to the site as necessary or as directed by the Engineer.

3. Contractor shall ensure that any vehicle transporting materials offsite are properly labeled and placarded in accordance with federal and state DOT requirements.

B. Type A Regulated and Type B Regulated Soil shall be hauled to an approved facility by the Contractor for disposal.

C. Type C Regulated Soil is of unknown origin or special circumstances. Type C Regulated Soil shall be hauled to an on-site segregated stockpile area. The Contractor shall protect the material from weather and other disturbances once stockpiled. The Port will inform the Contractor of the soil profile following additional analysis of the suspect material (as needed), and the soil will be categorized as either Type A Regulated, Type B Regulated, or Type D Soil and disposed of accordingly.
D. Type D Soil that is not reused onsite shall be hauled by the Contractor to a site determined by the Contractor. If the receiving/disposal facility requires additional testing or certification of this soil, Contractor shall complete these requirements, at no additional cost to the Port. The Port will not certify or declare the material suitable for unrestricted use.

3.03 OTHER REQUIREMENTS

A. Type A, Type B, or Type C Regulated Soil may be, upon approval of the Engineer, temporarily stockpiled within the construction area. Contractor shall place an impervious liner beneath the soil stockpile and securely cover the stockpile with waterproof covering (e.g., plastic sheeting). Additional measures (e.g., berm, jersey barriers, silt fence, etc.) may be required to minimize soil runoff from the stockpile area. The soil shall be removed prior to completion of Work.

B. Contractor shall provide the Engineer with all hauling receipts (or copies of receipts) from the disposal facility for all Type A, Type B, or Type C Regulated Soil at least weekly.

C. The Engineer may shut down excavation activities should unexpected regulated material be encountered during excavation.

END OF SECTION
PART 1 - GENERAL

1.01 DESCRIPTION OF WORK
A. The Work includes the requirements to provide air and noise control measures until Final Completion of the Work.

1.02 SUBMITTALS
A. Prior to Notice to Proceed, the Contractor shall submit a list of equipment to be used on the project and certify in writing that all equipment on the list and any additional equipment, including Contractor’s, subcontractors, or supplier’s equipment, shall meet the requirements of 3.01 below.

PART 2 - PRODUCTS - NOT USED

PART 3 – EXECUTION

3.01 AIR POLLUTION CONTROL
A. The Contractor shall meet or exceed EPA Tier 2 off-road diesel engine emission standards for off-road equipment >= 25hp and meet or exceed EPA 1994 on-road diesel engine emission standards for on-road equipment except as follows:
   1. Equipment being used in an emergency or public safety capacity
B. The Contractor shall not discharge smoke, dust, and other hazardous materials into the atmosphere that violate local, state, or federal regulations.
C. No vehicles can idle for more than 5 consecutive minutes, except as follows:
   1. Idling is required to bring or maintain the equipment to operating temperature
   2. Engine idling is necessary to accomplish work for which the equipment was designed (i.e. operating a crane)
   3. Idling vehicles being used in an emergency or public safety capacity
D. The Contractor shall minimize nuisance dust by cleaning, sweeping, vacuum sweeping, sprinkling with water, or other means. Equipment for this operation shall be on the job site or available at all times.

3.02 NOISE CONTROL
A. The Contractor shall comply with all local controls and noise level rules, regulations, and ordinances which apply to work performed pursuant to the Contract.
B. All internal combustion engines used on the job shall be equipped with a muffler of a type recommended by the manufacturer.

END OF SECTION
PART 1 - GENERAL

1.01 PERMITS, CODES AND REGULATIONS

A. Conform with the requirements of applicable permits, codes, and regulations as may govern the Work.

B. Conform with current applicable codes, regulations, and standards, which is the minimum standard of quality for material and workmanship. Provide labor, materials, and equipment necessary for compliance with code requirements or interpretations, although not specifically detailed in Drawings or specifications. Be familiar with applicable codes and standards prior to bidding.

1.02 VARIATIONS WITH CODES, REGULATIONS AND STANDARDS

A. Nothing in the Drawings and specifications permits Work not conforming to codes, permits, or regulations. Promptly submit written notice to the Engineer of observed variations or discrepancies between the Contract Documents and governing codes and regulations.

B. Appropriate modifications to the Contract Documents will be made by Change Order to incorporate changes to Work resulting from code and/or regulatory requirements. Contractor assumes responsibility for Work contrary to such requirements if Work proceeds without notice.

C. Contractor is not relieved from complying with requirements of Contract Documents which may exceed, but not conflict with requirements of governing codes.

PART 2 - PRODUCTS - NOT USED

PART 3 – EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Requirements relating to referenced standards.

1.02 QUALITY ASSURANCE

A. For products or workmanship specified by reference to a document or documents not included in the Project Manual, also referred to as reference standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard of date of issue specified in this section, except where a specific date is established by applicable code.

C. Should specified reference standards conflict with Contract Documents, request clarification from the Engineer before proceeding.

D. Neither the contractual relationships, duties, or responsibilities of the parties in Contract nor those of the Engineer shall be altered by the Contract Documents by mention or inference otherwise in any reference document.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 QUALITY CONTROL FOR COMPLIANCE:

A. The Contractor shall perform such detailed examination, inspection, quality control and assurance of the Work as to ensure that the Work is progressing and is being completed in strict accordance with the Contract Documents. The Contractor shall plan and lay out all Work in advance of operations so as to coordinate all Work without delay or revision. The Contractor shall be responsible for inspection of portions of the Work already performed to determine that such portions are in proper condition to receive subsequent Work. Under no conditions shall a portion of Work proceed prior to preparatory work having been satisfactorily completed. The Contractor shall ensure that the responsible Subcontractor has carefully examined all preparatory work and has notified the Contractor (who shall promptly notify the Port in writing) of any defects or imperfections in preparatory work that will, in any way, affect completion of the Work.

1.02 QUALITY ASSURANCE - CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

D. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform Work by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop Drawings or as instructed by the manufacturer.

G. Secure Products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.03 TOLERANCES

A. Monitor fabrication and installation tolerance control of Products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust Products to appropriate dimensions; position before securing Products in place.

1.04 REFERENCES AND STANDARDS

A. For Products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Contract Documents, except where a specific date is established by code.

C. Obtain copies of standards where required by product specification sections.
D. Neither the contractual relationships, duties, or responsibilities of the parties in Contract, nor those of the Engineer, shall be altered from the Contract Documents by mention or inference otherwise in any reference document.

1.05 TESTING SERVICES

A. Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by applicable laws, statutes, ordinances, codes, rules, and regulations or lawful orders of public authorities.

1. Neither observations by an inspector retained by the Port, the presence or absence of such inspector at the site, nor inspections, tests, or approvals by others, shall relieve the Contractor from any requirement of the Contract Documents, nor is any such inspector authorized to change any term or condition of the Contract Documents.

B. Necessary materials testing shall be performed by an independent testing laboratory during the execution of the Work and paid for by the Port of Tacoma, unless otherwise specified. Access to the area necessary to perform the testing and/or to secure the material for testing, shall be provided by the Contractor.

C. Testing does not relieve Contractor of performing Work to contract requirements.

D. Re-testing required because of non-conformance to specified requirements shall be performed by the same independent firm. Payment for re-testing will be charged to the Contractor by deducting testing charges from the Contract Sum via Change Order.

E. Material testing for initial material approval will be performed by an independent, certified laboratory and paid for by the Contractor. These tests must be dated within six (6) months of the submittal date.

F. Subsequent sampling and testing, required as the work progresses to ensure continual control of materials and compliance with all requirements of the Contract documents, shall be the responsibility of the Port, except as required by other sections of these Specifications.

1.06 MANUFACTURER’S FIELD SERVICES

A. When specified in individual specification sections, require material or Product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up equipment, test, and adjust and balance equipment as applicable, and to initiate instructions when necessary.

B. Submit qualifications of observer to Engineer 30 days in advance of required observations. Observer subject to approval of Engineer.

C. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES
   A. Temporary utilities
   B. Temporary sanitary facilities
   C. Temporary Controls: Barriers

1.02 TEMPORARY UTILITIES
   A. Provide and pay for all electrical power, lighting and water required for construction purposes.
   B. Use trigger-operated nozzles for water hoses, to avoid waste of water.

1.03 TEMPORARY SANITARY FACILITIES
   A. Provide and maintain required facilities and enclosures. Provide at time of project mobilization.
   B. Maintain daily in clean and sanitary condition.
   C. At end of construction, return facilities to same or better condition as originally found.

1.04 BARRIERS
   A. Provide barriers to prevent unauthorized entry to construction areas, to prevent access to areas that could be hazardous to workers or the public to allow for Port's use of site and to protect existing facilities and adjacent properties from damage from construction operations and demolition.
   B. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES
   A. Access roads
   B. Parking
   C. Construction parking controls
   D. Haul routes
   E. Maintenance
   F. Removal, repair
   G. Mud from site vehicles

PART 2 - PRODUCTS

2.01 SIGNS, SIGNALS, AND DEVICES
   A. Informational Signs, as required.
   B. Traffic Cones, candles and Drums.

PART 3 - EXECUTION

3.01 PREPARATION
   A. Ensure access roads, work area and surrounding areas are clear and ready for work.

3.02 ACCESS TO SITE
   A. Contractor shall conduct all business through the gate assigned by the Engineer.
      1. The Contractor may be required to relocate entry and related work areas as required by Port Operations.
   B. Provide unimpeded access for emergency vehicles. Maintain 20 foot (6 m) width driveways with turning space between and around combustible materials.
   C. Provide and maintain access to fire hydrants free of obstructions.

3.03 PARKING
   A. All Contractor's employee cars and work vehicles will be parked on-site within the work area as designated by the Engineer.

3.04 CONSTRUCTION PARKING CONTROL
   A. Control vehicular parking to prevent interference of access by emergency vehicles, and Port operations.
   B. Prevent parking on or adjacent to access roads or in non-designated areas.

3.05 HAUL ROUTES
   A. Confine construction traffic to designated haul routes.

3.06 MAINTENANCE
   A. Maintain traffic and parking areas in a sound condition free of excavated material, construction equipment, Products, mud, snow, and ice.
B. Maintain existing paved areas used for construction; promptly repair breaks, potholes, low areas, standing water, and other deficiencies, to maintain paving and drainage in original, or specified, condition.

3.07 REMOVAL, REPAIR

A. Repair existing facilities damaged by use, to original condition.
B. Repair damage caused by installation.

3.08 PUBLIC STREET AND ONSITE ROADWAY CLEANING

A. The Contractor shall be responsible for preventing dirt and dust escaping from trucks and other vehicles operating on or departing the project site by sweeping, covering dusty loads, washing truck tires, and all other reasonable methods.

B. When trucks and other equipment are operating on paved site roadways and paved surfaces, the Contractor will be required to clean said roadways, and other paved surfaces at least weekly, and at other times if required by the Engineer.

C. In the event that the above requirements are violated and no action is taken by the Contractor after notification of infraction by the Engineer, the Port reserves the right to have the roadways, and other paved surfaces in question cleaned by others and the expense of the operation charged to the Contractor.

END OF SECTION
PART 1 – GENERAL

1.01 WORK DESCRIPTION

A. The Work shall consist of planning, installing, inspecting, maintaining, and removing Temporary Erosion and Sediment Control (TESC) Best Management Practices (BMPs) to prevent pollution of air and water; and to control, respond to, and dispose of eroded sediment and turbid water during the term of the Contract.

B. These TESC requirements shall apply to all areas associated with the Work, including but not limited to, the following:
   1. Work areas
   2. Equipment and material storage areas
   3. Staging areas
   4. Stockpiles
   5. Discharge points within or adjacent to the work areas that are impacted by stormwater runoff from the site

C. Acceptance of TESC plans does not constitute an approval of permanent Work or drainage design (e.g., size and location of roads, pipes, restrictors, channels, retention facilities, utilities, etc.).

D. Contractor shall read and conform to all requirements set forth in Washington Department of Ecology’s (Ecology) NPDES General Permit for Discharges Associated with Construction Activities (CSGP).

1.02 REFERENCES

A. The rules, requirements, and regulations that apply to this Work include, but are not necessarily limited to, the following:
   3. Washington State Department of Transportation Standard Specification M41-10, Division 8-01 Erosion Control and Water Pollution Control, current version.
   4. Pierce County Stormwater and Site Development Manual, current version.

1.03 SUBMITTALS

A. A Construction Stormwater Pollution Prevention Plan (SWPPP), as required by NPDES permit.

B. Safety Data Sheet (SDS) for any dust palliative product.

C. A copy of all Contractor site inspection logs and monthly Discharge Monitoring Reports (DMRs).

D. Water Management Plan/Temporary Dewatering Plan.
1.04 AUTHORITY OF ENGINEER

A. The Engineer has the authority to limit the surface area of erodible earth material exposed by excavation, borrow and fill operations, as determined by analysis of project conditions; and to direct the Contractor to provide immediate permanent or temporary pollution control measures to minimize impacts to adjacent watercourses and other areas of water impoundment.

B. In the event that areas adjacent to the work area are suffering degradation due to erosion, sediment deposit, water flows, or other causes, the Engineer may stop construction activities until the Contractor rectifies the situation.

PART 2 – PRODUCTS

2.01 DUST CONTROL

A. Dust palliative for dust control proposed by the Contractor and approved by the Engineer.

PART 3 – EXECUTION

3.01 GENERAL

A. In the event of conflict between these requirements and pollution control laws, rules, or regulations of other federal, state, or local agencies, the more restrictive laws, rules, or regulations shall apply as determined by the Engineer.

B. No project discharge of water shall be allowed that exceeds the regulated pollutant levels.

C. Contractor shall be solely responsible for all BMP modifications and upgrades to comply with the requirements of this Section, at no additional cost to the Port.

D. Contractor shall be solely responsible for any damages and fines incurred because of Contractor, subcontractor, or supplier actions in implementing the requirements of this Section.

E. The Contractor shall be solely responsible for schedule impacts incurred because of Contractor, subcontractor, or supplier actions in implementing the requirements of this Section.

3.02 TEMPORARY EROSION AND SEDIMENT CONTROL DEVELOPMENT

A. Contractor shall develop project-specific TESC BMPs and incorporate them into the SWPPP. Contractor shall address the following issues as part of developing and implementing the BMPs.

1. TESC BMPs must meet the requirements in Ecology’s Volume II of the Stormwater Management Manual for Western Washington, current version.

2. TESC notes and details shown in the Drawings and the information in this Section form a basis of the minimum requirements for a TESC Plan. Contractor shall develop a TESC Plan specific to the construction schedule and proposed means and methods prior to commencing construction activities for the duration of the Project.

3.03 TEMPORARY EROSION AND SEDIMENT CONTROL IMPLEMENTATION

A. Contractor is responsible for implementing and updating the SWPPP including TESC BMPs.

1. Contractor shall inspect the TESC measures daily and maintain these measures to ensure continued proper functioning for the duration of the Project.

2. Contractor will be responsible for documenting TESC site inspections on a weekly basis in areas of active construction and on a monthly basis in areas that have undergone stabilization. Contractor shall keep records of the inspections on site.
3. During the construction period the Contractor shall, at no additional cost to the Port, upgrade and/or maintain TESC measures as needed, based on Contractor means and methods, work sequencing, and changing site conditions (e.g., changes to impervious surface coverage, proximity of work to storm conveyance systems, storm events, etc.). Contractor shall modify these measures for changing site conditions and update the SWPPP to document all modifications made.

B. Catch basins shall be cleaned when the depth of debris reaches 30% of the sump depth or the debris surface is six (6) inches below the outlet pipe. Contractor shall clean all catch basins, manholes, and conveyance lines, if present, prior to Work completion. The cleaning process shall not flush sediment-laden water into a downstream system.

C. Contractor shall ensure that water, or a dust palliative and a dispensing subcontractor, if needed, is available for project use. It is the responsibility of the Contractor to develop and adhere to appropriate safety measures pertaining to the palliative use. This also includes ensuring the dispensing subcontractor develops and adheres to the appropriate safety measures, if a dispensing subcontractor is used. Water used for dust suppression shall not be applied at such a rate or in a location that it will generate runoff from the site. Water used for dust control shall not be obtained from site fire hydrants or other connections.

D. Areas of exposed soils, including embankments, which will not be disturbed for two days during the wet season (October 1 through April 30) or seven days during the dry season (May 1 through September 30), shall immediately be stabilized by the Contractor with an Ecology-approved TESC measure (e.g., plastic covering, etc.).

E. TESC measures in an inactive area shall be inspected and maintained by the Contractor until the area is permanently stabilized.

F. In the event that additional temporary erosion and pollution control measures are required due to the Contractor's negligence, carelessness, or failure to install permanent controls as a part of the Work as scheduled or as ordered by the Engineer, such work shall be performed by the Contractor at its own expense.

G. Contractor shall remove all TESC facilities, install permanent site surfacing improvements and permanent BMPs with minimal disturbance, and shall clean stormwater facilities prior to Work completion.

END OF SECTION
PART 1 - GENERAL

1.01 SUBMITTALS

A. Product Data Submittals: Submit manufacturer's standard published data. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers’ standard data to provide information specific to this Project.

B. Shop Drawing Submittals: Prepared specifically for this Project; indicate utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.

PART 2 - PRODUCTS

2.01 NEW PRODUCTS

A. Provide new products unless specifically required or permitted by the Contract Documents.

2.02 PRODUCT OPTIONS

A. Products Specified by Reference Standards or by Description Only: Use any product meeting those standards or description.

B. Products Specified by Naming One or More Manufacturers: Use a product of one of the manufacturers named and meeting specifications, no options or substitutions allowed.

C. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named.

PART 3 - EXECUTION

3.01 TRANSPORTATION AND HANDLING

A. Coordinate schedule of product delivery to designated prepared areas in order to minimize site storage time and potential damage to stored materials.

B. Transport and handle products in accordance with manufacturer's instructions.

C. Transport materials in covered trucks to prevent contamination of product and littering of surrounding areas.

D. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

E. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.

F. Arrange for the return of packing materials, such as wood pallets, where economically feasible.

3.02 STORAGE AND PROTECTION

A. Designate receiving/storage areas for incoming products so that they are delivered according to installation schedule and placed convenient to work area in order to minimize waste due to excessive materials handling and misapplication.

B. Store and protect products in accordance with manufacturers' instructions.

C. Store with seals and labels intact and legible.

D. Store sensitive products in weather tight, climate controlled, enclosures in an environment favorable to product.
E. For exterior storage of fabricated products, place on sloped supports above ground.

F. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

G. Prevent contact with material that may cause corrosion, discoloration, or staining.

H. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

I. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This section includes information on warranty, operation and maintenance manuals and as built documentation.

B. Prior to requesting final inspection, the Contractor shall assure itself that the project is complete in all aspects.

PART 2 - PRODUCTS

2.01 WARRANTY

A. The Contractor warrants the labor, materials and equipment delivered under the contract to be free from defects in design, material, or workmanship, and against damage caused prior to final inspection. Unless otherwise specified, this warranty extends for a period of one (1) year from the date of Substantial Completion.

B. The Contractor shall promptly (within 48-hours) repair or replace all defective or damaged items delivered under the contract. The Contractor will haul away all defective or damaged items prior to Substantial Completion.

C. In the event of equipment failure, during such time or in such a location that immediate repairs are mandatory, the Contractor shall respond promptly, irrespective of time. If the Contractor is not available, the Port will effect repairs. The Contractor shall then reimburse the Port for parts and labor necessary to correct deficiencies as defined within the warranty clause and time.

2.02 OPERATION AND MAINTENANCE MANUALS

A. The following information (minimum of 3 copies) shall be furnished for all items of equipment on the Project requiring operational and/or maintenance procedures and for any additional items indicated by the Engineer:

1. Preventative Maintenance Procedures: These instructions consist of the equipment manufacturer’s recommended steps and schedules for maintaining the equipment.

2. Overhaul Instructions: These instructions consist of the manufacturer's directions for the disassembly, repair and reassembly of the equipment and any safety precautions that must be observed while performing the work.

3. Parts List: This list consists of the generic title and identification number of each component part of the equipment. This list shall include weights of individual components of each item of equipment weighing over 100 pounds.

4. Spare Parts List: This list consists of the manufacturer’s recommendations of number of parts which should be stored by the Port and any special storage precautions which may be required.

5. Exploded View: Exploded or cut views of equipment shall be provided if available as a standard item of the manufacturer’s information. When exploded or cut views are not available, plan and section views shall be provided with detailed callouts.

6. Specific Information: Where items of information not included in the above list are required, they will be provided as described in the specifications for the equipment.

7. Complete identification, including model and serial numbers.

8. Submittal information, as specified in Section 01 33 00 Submittal Procedures.
9. Warranty Information: This information consists of the name, address, and telephone number of the manufacturer's representative to be contacted for warranty, parts, or service information.

10. Maintenance information summaries shall be prepared on 8-1/2" x 11" paper and digital version (PDF format) on CD-ROM and shall contain the following information compiled from manufacturer's recommendations in the order shown.
   a. Description or name of item of equipment.
   b. Asset number (to be provided at a later date)
   c. Manufacturer.
   d. Name, address, and telephone number of local manufacturer’s representative.
   e. Serial number (where applicable).
   f. Equipment nameplate data.
   g. Recommended maintenance procedures:
      1) Description of procedures.
      2) Additional information as required for proper maintenance.
   h. Maintenance schedule
   i. Recommended spare parts (where applicable).
   j. Warranty - Start date; Finish date

11. Provide video tapes, DVDs, and audio-visual training materials utilized in the manufacturer's instruction program.

12. All such information shall be organized by the Contractor into 3-inch, 3-post, expandable metal binders. The binders shall be sized for material approximately 8-1/2 by 11 inches, and the material in the binders shall not protrude beyond the covers. Provide four (4) paper copies and an electronic copy in PDF format to be retained by the Port.

13. All operation and maintenance information shall be comprehensive and detailed and shall contain information adequately covering all normal operation and maintenance procedures.

14. All information shall be specific for the items of equipment installed on the project. Material not directly applicable shall be removed, omitted, or clearly marked as inapplicable.

15. If manufacturer’s standard brochures and manuals are used to describe operating and maintenance procedures, such brochures and manuals shall be modified to reflect only the model or series of equipment used on this project.

16. Extraneous material shall be crossed out neatly or otherwise annotated or eliminated. It shall be the responsibility of the Contractor to ensure that all operation and maintenance materials are obtained. Material submitted must meet the approval of the Engineer prior to project acceptance.
PART 3 - EXECUTION

3.01 FINAL DOCUMENTS

A. Project As-Built Drawings
   1. Project As-Built Drawings shall be compiled by the Contractor and submitted to the Engineer for translation to the Record Drawings on a monthly basis.
   2. The Project As-Built Drawings will be submitted on paper full-sized (ANSI D) copy.
   3. Drawings shall be kept current and shall be done at the time the material and equipment is installed. Annotations to the record documents shall be made with an erasable colored pencil conforming to the following color code:
      a. Additions - Red
      b. Deletions - Green
      c. Comments - Blue
      d. Dimensions - Graphite
   4. Project As-Built Drawings must be complete and accepted by the Engineer before Final Completion is issued.
   5. As-Built Drawings shall be in accordance with horizontal and vertical control as shown on the drawings.

B. Final Survey
   1. The Final Survey shall be completed and submitted to the Engineer within 30 days of Substantial Completion. Final Survey must be complete and accepted by the Engineer before Final Completion is issued.

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Examination, preparation, and general installation procedures.
B. Cutting and patching.

1.02 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures

PART 2 - PRODUCTS

2.01 PATCHING MATERIALS

A. New Materials: As specified in product sections; match existing products and work for patching and extending work.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that existing site conditions and substrate surfaces are acceptable for subsequent work. Start of work means acceptance of existing conditions.
B. Verify that existing substrate is capable of structural support or attachment of new work being applied or attached.
C. Examine and verify specific conditions described in individual specification sections.
D. Verify that utility services are of the correct characteristics, and in the correct locations.
E. Prior to Cutting: Examine existing conditions prior to commencing work. After uncovering existing work, assess conditions affecting performance of work. Beginning of cutting or patching means acceptance of existing conditions.

3.02 GENERAL INSTALLATION REQUIREMENTS

A. Install products as specified in individual sections, in accordance with manufacturer's instructions and recommendations, and so as to avoid waste due to necessity for replacement.
B. Make vertical elements plumb and horizontal elements level, unless otherwise indicated.
C. Make neat transitions between different surfaces.

3.03 CUTTING AND PATCHING

A. Perform whatever cutting and patching is necessary to:
   1. Complete the work.
   2. Fit products together to integrate with other work.
   3. Provide openings for pipe penetrations.
   4. Match work that has been cut to adjacent work.
   5. Repair areas adjacent to cuts to required condition.
   6. Repair new work damaged by subsequent work.
   7. Remove and replace defective and non-conforming work.
B. Execute work by methods that avoid damage to other work and that will provide appropriate surfaces to receive patching and finishing. In existing work, minimize damage and restore to original condition.

C. Cut rigid materials using masonry saw or core drill. Pneumatic tools not allowed without prior approval.

D. Restore work with new products in accordance with requirements of Contract Documents.

3.04 PROTECTION OF INSTALLED WORK

A. Protect installed work from damage by construction operations.

B. Provide special protection where specified in individual specification sections.

C. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

END OF SECTION
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Section includes progress and final cleaning requirements and restoration of damaged areas prior to final inspection.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 PROGRESS CLEAN-UP

A. The Contractor shall clean the project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
   1. Comply with all requirements for removal of combustible waste materials and debris.
   2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
   3. Containerize unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
      a. Use containers intended for holding waste materials for the type of material to be stored.
   4. Coordinate progress cleaning for joint use areas where Contractor and other contractors are working concurrently.
B. Site: Maintain Project site free from waste materials and debris.
C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the work.
   1. Remove liquid spills promptly.
   2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire area, as appropriate.
D. Trenches: Remove debris from trenches before backfilling.
E. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways.
F. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration until Substantial Completion.
G. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period.
H. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.02 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
B. Cleaning:

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:
   a. Sweep paved areas broom clean. Remove spills, stains, and other foreign deposits.
   b. Remove tools, construction equipment, machinery, and surplus material from Project site.

3.03 REPAIR OF WORK

A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.

B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surface, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.

1. Touch up and otherwise repair and restore marred or exposed finishes and surface. Replace finishes and surfaces that already show evidence of repair or restoration.

END OF SECTION
PART 1 - GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Substantial Completion procedures
2. Final completion procedures

1.02 ACTION SUBMITTALS

A. Contractor’s List of Incomplete Items (Contractor’s Punch List): Initial submittal at Substantial Completion.

1.03 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor’s List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor’s punch list) indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request:

1. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
2. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by the Contract Document or Engineer. Label with manufacturer’s name and model number where applicable.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request:

1. Terminate and remove temporary facilities from Project site
2. Complete final cleaning requirements

D. Submit a written request for inspection to determine Substantial Completion a minimum of 5 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Engineer will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare the Notice of Substantial Completion after inspection or will notify Contractor of items, either on the Contractor’s list or additional items identified by the Engineer, that must be completed or corrected before notice will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for final completion.

1.04 PUNCH LIST (LIST OF INCOMPLETE ITEMS)

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of Construction.
1. Organize list of spaces in sequential order
2. Organize items applying to each space by major elements

1.05 FINAL COMPLETION PROC EDURES

A. Submittals Prior to Final Completion: Before requesting final inspection for determining final completion, complete and submit the following:

1. Submittal of all remaining items, including as-built documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, surveys, and similar final record information and all other submittals defined in the Contract Documents.

2. List of Incomplete Items: Submit copy of Engineer’s Substantial Completion inspection list of items to be completed or corrected (Punch List). Copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 5 days prior to date the work will be complete and ready for final inspection and tests. On receipt of request, the Engineer will either proceed with inspection or notify contractor of unfulfilled requirements.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.06 FINAL ACCEPTANCE PROC EDURES

A. Submittals Prior to Final Acceptance:

1. Receipt and approval of application for final payment; due within seven (7) days of receipt of Final Completion by the Engineer

2. Execution of all Change Orders

3. Contractor’s signed waiver and release of claims on the Engineer provided form

4. Contractor’s submittal of list of all suppliers and subcontractors and the total amounts paid to each on the Engineer provided form

5. Contractor’s submittal of a list of all subcontractors and suppliers requiring Affidavits of Wages paid on the Contract and certify that each of companies will submit an approved Affidavit of Wages paid to the Port within 30 days

B. The Engineer will issue the Final Acceptance Memo upon receipt of the required submittals

PART 2 - PRODUCTS - NOT USED

PART 3 – EXECUTION - NOT USED

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The scope of the “Demolition” Work is indicated on the drawings. The Work includes the requirements for the removal, wholly or in part and satisfactory disposal of all utilities, pavements, or other features identified within these specifications and on the drawings. The Demolition Work is included on utilities and other obstructions which are designated to be demolished on the drawings. The drawings should be used for guidance only and to indicate typical general construction features of the various types of structures and is not to be construed as definitive or adequate to supplant the actual on-site inspection by the Contractor.

1.02 RELATED SECTIONS

A. Section 01 33 00 – Submittal Procedures
B. Section 01 35 43.19 – Export Soil Management
C. Section 31 00 00 – Earthwork
D. Section 31 23 19 – Dewatering

1.03 SUBMITTALS

A. Submit materials data in accordance with Section 01 33 00 – Submittal Procedures. Furnish manufacturers’ technical literature, standard details, product specifications, and installation instructions for all products.

B. Submittals shall include the following:

1. Demolition Management Plan (DMP) with documentation that includes and addresses the following:
   a) Work sequence and schedule. Include phased demolition requirements consistent with the overall project schedule.
   b) Activity-based schedule.
   c) List of equipment to be used for demolition operations.
   d) Means and methods to protect existing infrastructure, stockpile materials, and deliver salvaged material.

2. Proposed landfills and recyclers.

1.04 SITE CONDITIONS

A. The terminal is an operating facility. All work shall be completed in accordance with the constraints and access plan shown on the Drawings. Access to the site is restricted by ongoing terminal operations. Contractor operations shall be restricted to the designated areas.

B. Coordinate and schedule, with the Engineer, access to the site in advance, and acknowledge that terminal operations take precedence over construction activities.

C. All demolition items shall become the property of the Contractor. Disposal of all demolition items shall be in accordance with the specifications, local, state, and federal requirements.
1.05 EXISTING UTILITIES

1. The Contractor shall verify the location of existing utilities. Contact the Washington Utilities Underground Location Center at 1-800-424-5555 (or 811) for utilities within the public right of way and on Port property as a supplementary measure. The Contractor shall provide private utility locating services for non-public utility locating on Port property.

2. The Contractor shall protect from damage those utilities which are to remain. Utilities damaged by the Contractor shall be repaired at no cost to the Owner.

1.06 SOILS CONTAINING REGULATED MATERIAL

1. Refer to Section 01 34 43.19 – Export Soil Management and Section 31 00 00 – Earthwork for sampling, testing, and disposal requirements of soils containing regulated materials.

1.07 SUMMARY

A. Items and material categories for demolition include, but are not limited to pavement, base course, and buried utilities.

B. Any damage by the Contractor’s operations to materials not identified for demolition shall be repaired or replaced, as determined by the Engineer, by the Contractor and at the Contractor’s expense.

PART 2 - PRODUCTS

2.01 GENERAL

A. All products that are required to repair, accomplish, or be incorporated into the work shall be selected by the Contractor, subject to approval by the Engineer.

PART 3 - EXECUTION

3.01 GENERAL

A. The Contractor represents that it has visited the site to become familiar with the quantity and character of all materials to be demolished. The Contractor agrees that the premises were made available prior to deadline for submission of bids for whatever inspection and tests the Contractor deemed appropriate in preparation of bids.

3.02 PREPARATION

A. Utility locates shall be performed prior to the start of demolition. Coordinate and resolve with the Engineer and terminal operators to turn off or de-energize affected services before starting demolition.

B. Verify all items for demolition and disposal as early as practical prior to the start of demolition. Notify the Engineer immediately if observed conditions differ from anticipated.

C. Contractor shall coordinate demolition work with the Engineer and perform demolition activities in a manner that minimizes the impact to terminal operations.

D. Notify the Engineer a minimum of two (2) weeks prior to beginning work.
3.03 DEMOLITION OF UTILITIES

A. Well in advance of the demolition of any utilities, the Contractor shall advise the appropriate agency of the impending action and arrange with each utility for all Work required by that utility under this contract. Special conditions required by the utility shall be the sole responsibility of the Contractor. Contact the utilities for bond requirements, if any, prior to bid.

1. Piping:
   a) Remove all standing water from storm drain piping and catch basins designated for removal or replacement. Refer to Section 31 23 19 – Dewatering for additional requirements.
   b) Remove piping in the demolition area, including underground or exposed piping, as indicated on the drawings.

3.04 SAWCUTTING

A. Perform full depth or partial depth sawcutting of asphalt and concrete pavement as indicated on the Drawings or otherwise specified.
B. Neatly cut and remove materials, and prepare openings to receive new work.
C. Remove concrete and pavement in small sections.
D. Use care in removing pavement and concrete to protect existing pavement or concrete which is to remain in place adjacent to the work area. Ensure that all removals are accomplished by making a neat vertical saw cut at the boundaries of the area to be removed.
E. Provide vacuum equipment to control dust and debris generated by sawcutting operations. Prevent silt-laden runoff generated by sawcutting operations from entering the storm drainage system or waters of the state.
F. Replace any adjacent damaged materials not designated for removal at no additional cost to the Owner.
G. Provide bracing, shoring, or screening as needed to prevent damage to adjacent facilities that are to remain in place.

3.05 DISPOSAL

A. General: All materials except those materials containing substances classified as hazardous or potentially hazardous by local, state or Federal regulating agencies, shall upon their demolition become the property of the Contractor. All such material, including those containing hazardous or potentially hazardous substances shall be removed and promptly disposed legally away from the site and on property not owned by the Owner, except as otherwise provided in these specifications. No material shall be disposed of in adjoining waterways or in the fill. Burning of materials in these areas falls under the jurisdiction of the Pierce County regulations and is generally forbidden under all circumstances.
B. Cleanup: After removal of utilities clean and grade the area. There shall be no debris, rubble, or litter left at the site from any of the demolition operations and the site shall be clean.
C. The OWNER encourages the salvage and recycling of materials. The Contractor shall salvage or recycle, in an acceptable manner to environmental agencies and the Engineer, at his option any of the materials designated for disposal.
D. Non-salvageable or non-recyclable demolition, contaminated soils and creosote debris shall be transported to an Engineer approved lined landfill with a Leachate Collection System.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The extent and location of “Concrete Reinforcement” Work is shown in the Contract Documents.

1.02 RELATED SECTIONS

A. Section 01 33 00 – Submittal Procedures
B. Section 03 30 00 – Cast-in-Place Concrete
C. Section 03 40 00 – Precast Concrete

1.03 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.
B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.

   2. AWS D1.4 Structural Welding Code – Reinforcing Steel
F. Concrete Reinforcing Steel Institute (CRSI)
   1. Manual of Standard Practice
G. International Code Council (ICC)
   1. International Building Code (IBC)
H. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS
   A. Submit the following in accordance with Section 01 33 00 – Submittal Procedures:
      1. Manufacturers’ technical literature, standard details, product specifications, and
         installation instructions for all products.
      2. Reinforcement Shop Drawing:
         a) Layout of all reinforcement, including:
            1) Reinforcement types
            2) Reinforcement sizes and lengths
            3) Clear distances as necessary
            4) Reinforcement bend diagrams
         b) Mill certifications for each type of reinforcement
   B. Do not deliver concrete reinforcement to the job site until receipt of shop drawings approval
      from the Engineer.

1.05 QUALITY ASSURANCE
   A. General
      1. The Contractor shall perform material tests, specified and required by applicable
         standards, by an approved laboratory and certified to demonstrate that the materials are
         in conformance with the specifications.
      2. Tests, inspections, and verifications shall be performed and certified at the Contractor’s
         expense.
      3. The Contractor shall make the work areas available for inspection by the Engineer. The
         Contractor shall be responsible for verifying concrete forms, reinforcing steel, embedded
         items, and similar appurtenances are properly placed prior to any inspection.
   B. Reinforcement Steel Tests
      1. Mechanical testing of steel shall be in accordance with ASTM A370 except as otherwise
         specified or required by the material specifications.
      2. Tension tests shall be performed on full cross-section specimens using a gage length
         that spans the extremities of specimens with welds or sleeves included.
      3. Chemical analyses of steel heats shall show the percentages of carbon, phosphorous,
         manganese, sulfur and silicon present in the steel.
   C. Radiographic Examination of Welds
      1. Radiographic examination of welds shall be in accordance with ASTM E94 and shall be
         performed and evaluated by an approved testing agency adequately equipped to
         perform such services.
PART 2 - PRODUCTS

2.01 GENERAL
   A. All concrete reinforcement materials shall be new and free from rust.

2.02 REINFORCEMENT
   A. Deformed bars
      1. Bars for reinforcement shall comply with the requirements of ASTM A615, Grade 60 deformed, except as noted in paragraph 2 below.
      2. Reinforcement indicated to be welded shall be ASTM A706, Grade 60.
   B. Spiral Reinforcement
      1. Wire for spiral reinforcement shall be hot-rolled ASTM 615, Grade 60.
   C. Wire for Reinforcement
      1. Wire for reinforcement shall comply with the requirements of ASTM A82.
   D. Welded Wire Fabric
      1. Wire fabric shall comply with the requirements of ASTM A185. Wire shall be supplied in flat sheets, rolls are not acceptable.
      2. For wire with a specified yield strength (fy) exceeding 60,000 psi, fy shall be the stress corresponding to a strain of 0.35 percent.
   E. Wire ties
      1. Wire ties shall be 16 gauge or heavier black annealed steel wire.

2.03 OTHER MATERIALS
   A. All other materials not specifically described but required for a complete and proper installation of reinforcement, shall be selected by the Contractor, subject to the approval of the Engineer.
   B. Supports
      1. Bar supports for formed surfaces shall be designed and fabricated in accordance with CRSI Manual of Standard Practice and shall be steel or precast concrete blocks.
      2. Precast concrete blocks shall have wire ties and shall be not less than 4 inches square when supporting reinforcement on ground.
      3. Precast concrete block shall have compressive strength equal to that of the surrounding concrete.
      4. Where concrete formed surfaces will be exposed to weather or where surfaces are to be painted, steel supports within 1/2 inch of concrete surface shall be galvanized, plastic protected or of stainless steel.
      5. Concrete supports used in concrete exposed to view shall have the same color and texture as the finish surface.
      6. For slabs on grade, supports shall be precast concrete blocks, plastic coated steel fabricated with bearing plates, or specifically designed wire-fabric supports fabricated of plastic.
7. Precast concrete supports shall be wedged-shaped, not larger than 3-1/2 by 3-1/2 inches, of thickness equal to that indicated for concrete cover and have an embedded hooked tie-wire for anchorage.

8. Supports for bars in concrete with formed surfaces exposed to view or to be painted shall be plastic-coated wire, stainless steel or precast concrete supports.

9. Bar supports shall comply with the requirements of ACI SP-66.

10. Bar supports used in precast concrete with formed surfaces exposed to view shall be the same quality, texture and color as the finish surfaces.

2.04 MATERIAL HANDLING, DELIVERY, & STORAGE

A. Protection:
   1. Protect reinforcement before, during and after installation and protect the installed Work and materials of other trades. Handle and protect all reinforcement per the applicable ASTM material standard.
   2. Store in a manner to prevent fouling with dirt, grease and other bond-breaking coatings.
   3. Use all necessary precautions to maintain identification after the bundles are broken.

B. Replacements:
   1. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Engineer at no additional cost to the Owner.

PART 3 - EXECUTION

3.01 PREPARATION FOR EXECUTION OF WORK

A. Inspection:
   1. Prior to installation of this section, carefully inspect the installed Work of other trades and verify that such Work is complete to the point where this installation may properly commence.

B. Order Lists:
   1. Before ordering material, furnish all submittals for approval by the Engineer. Do not order material until such lists and bending diagrams have been approved. The approval of order lists and bending diagrams by the Engineer shall in no way relieve the Contractor of responsibility for the correctness of such lists and diagrams.

3.02 EXECUTION OF WORK

A. Reinforcing Steel Bars
   1. Fabrication:
      a) Bend all bars cold to the shapes indicated on the drawings unless otherwise approved by the Engineer.
      b) Do not field-bend bars partially embedded in concrete except as indicated on the drawings or as approved by the Engineer.
      c) Make bends and hooks in accordance with the applicable portions of the IBC and the CRSI Manual of Standard Practice.
2. Placing and Fastening:
   a) Place all steel reinforcement accurately and hold firmly in the position indicated on the drawing during the placing and setting of concrete.
   b) Tie bars at all intersections, except where spacing is less than one foot in each direction, and then tie alternate intersections.
   c) Wire tie ends shall face away from the forms.
   d) Provide the following minimum concrete covering of reinforcement:
      1) Concrete below ground deposited against forms: 2 inches
      2) Concrete deposited against earth: 3 inches
      3) Concrete elsewhere: As indicated on the drawings, or as required by ACI 318 where specific information is not provided.
   e) Maintain the minimum distance from the forms by means of stays, blocks, ties, hangers, or other approved supports.
      1) Blocks for holding reinforcement from contact with the forms, shall be precast mortar blocks of compressive strength not less than 3750 psi of approved shape and dimensions, or approved metal chairs. Blocks are not permitted in pile caps or other structures exposed on the underside of a dock.
      2) Metal chairs which are in contact with the exterior surface of the concrete shall be plastic-coated or galvanized.
      3) Separate layers of bars by plastic chairs, by precast mortar blocks of compressive strength not less than 3750 psi, or by other equally suitable devices. The use of pebbles, pieces of broken stone, brick, metal pipe, and wooden blocks will not be permitted.
      4) The minimum spacing between bars shall be one bar diameter or one inch minimum, but not less than 1-1/3 times the maximum size of coarse aggregate.
   f) Place reinforcement, inspect, and obtain approval of the Engineer before placing concrete. Concrete placed in violation of this provision may be rejected and removal required, to be followed by placing of new reinforcing steel and concrete by the Contractor at no additional cost to the Owner.
   g) In the event that conduits, piping, inserts, sleeves, or other items interfere with placing reinforcement as indicated on the drawings or as otherwise required, immediately consult the Engineer and obtain approval of new procedure before placing concrete.

3. Splicing:
   a) Furnish all reinforcement in the full lengths indicated on the drawings. Splicing of bars, except when indicated on the drawings, will not be permitted without written approval of the Engineer. When approved, stagger splices as far as possible.
   b) Unless shown otherwise, lap splice for with lengths as dictated by ACI 318, but no less than 18 inches.
1) Lapped bars shall be placed in contact and securely tied or spaced transversely apart to permit the embedment of the entire surface of each bar in concrete.

2) Lapped bars shall not be spaced farther apart than one-fifth the required length of lap or 6 inches.

c) Weld reinforcing steel only as indicated on the drawings unless authorized otherwise in writing by the Engineer.

1) When welding reinforcing bar splices, use low-hydrogen electrodes with preheat and interpass temperatures of not less than 200°F. Clean welds of all slag.

d) Bar couplers shall be used only as indicated on the drawings unless authorized otherwise in writing by the Engineer.

B. Cleaning Reinforcement

1. Steel reinforcement, at the time concrete is placed around it, shall be free from loose rust or mill scale, oil, paint and all other coatings that will destroy or reduce the bond between steel and concrete.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. Work includes furnishing of all labor, material, and equipment for providing cast-in-place concrete and associated work.

B. Cast-in-place concrete formwork

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures

B. Section 03 20 00 - Concrete Reinforcement

1.03 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.

9. ASTM C231 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.

F. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS
A. Submit the following in accordance with Section 01 33 00 – Submittal Procedures for the following products:
   1. Certificates of Specification compliance for materials to be used.
   2. Proposed concrete mix design, indicating constituent material contents per cubic yard of concrete.
   3. Mix design test certificates for compressive strength, yield, air content, and slump of the proposed concrete mix. As a minimum, compressive strength test results at 7, 14, and 28-days shall be provided in accordance with ACI 318 5.3.
   4. Manufacturer's name and certificates of compliance with applicable standards shall be provided for all admixtures, concrete bonding agents, curing compounds, etc., proposed for use on the job.

1.05 QUALITY ASSURANCE
A. General
   1. The Contractor shall perform material tests, specified and required by applicable standards, by an approved laboratory and certified to demonstrate that the materials are in conformance with the specifications.
   2. The Engineer will perform inspection and testing of concrete strength as required. The Contractor shall provide all necessary assistance and access in carrying out such inspections and tests, including sufficient mixed concrete and constituent materials required for testing and inspection, at its own expense.
   3. Contractor shall be responsible for verifying concrete forms, reinforcing steel, embedded items, and similar appurtenances are properly placed prior to any inspection.
B. Qualification of Workmen as follows:
   1. Provide at least one person who shall be present at all times during execution of this portion of the work. They shall be thoroughly trained and experienced in concrete work, and shall direct all work performed under this section.
   2. Trained and experienced journeyman concrete finishers shall be responsible for finishing of exposed surfaces.

PART 2 - PRODUCTS

2.01 GENERAL
A. All concrete, unless specifically permitted by the Engineer, shall be normal-weight concrete and ready-mix. Batching, mixing, transportation, and delivery of ready-mix concrete shall conform to ASTM C 94.
B. Obtain cementitious materials from same source throughout.

2.02 MATERIALS
A. Portland cement: For mixes without fly ash, Type I-II or Type II conforming to ASTM C 150 and ASTM C 595.
   1. Upon written authorization of the Engineer, Type III cement may be used for mixes without fly ash.
   2. Tricalcium aluminate (C3A) content of the cement: Not less than 4% nor more than 10%.
B. Portland cement: For mixes with fly ash, Type I or Type I-II conforming to ASTM C 150.
   1. Fly ash: Meets the requirements of ASTM C 618, Type F, with the added provisions that the loss on ignition shall not exceed 6 percent.
   2. Ensure fly ash is stored in a separate silo from that of cement.
   3. Split bins are not acceptable.
C. Aggregate: Conform to ASTM C 33.
   1. All coarse and fine aggregate shall consist of hard, tough, durable, particles free from foreign materials, and shall be stored in such a manner as to prevent segregation, excessive breakage, and the introduction of foreign material.
   2. Maximum size of coarse aggregate shall not be larger than three fourths of the minimum clear spacing between reinforcing steel bars and/or between bars and side forms and/or between bars and top or bottom surface of the concrete.
   3. Aggregate larger than 1-1/2 inch shall not be used without written permission from the Engineer.
D. Water-reducing admixtures: Conform to the requirements of ASTM C 494. Dosage rates in accordance with the manufacturer's recommendations.
E. Air-entraining admixtures: Conform to ASTM C 260. Dosage rates in accordance with the manufacturer's recommendations to meet the air content specified herein. The air-entraining admixture shall be added directly to the concrete materials either before or during mixing.
2.03 CONCRETE MIX DESIGN

A. Concrete for foundations may contain fly ash as a mineral admixture.

B. The proportions of aggregate to cement for any concrete shall be such as to produce a mixture which will work readily into the corners and angles of the forms, around reinforcement and embedded items, with the least possible segregation of the material and preventing excess free water to collect on the surface.

C. Submit to the Engineer, for review and approval, details of proposed concrete mixes including certificates of Specification compliance as described in paragraph 1.04 of this section.

D. Select mix proportions in accordance with ACI 318:
   1. Submit test data representing 30 recent consecutive tests for each mix to establish the standard deviation.
   2. The criteria for acceptance of submitted tests shall be in accordance with ACI 318.
   3. Where 30 recent consecutive tests are not available, the standard deviation may be determined by records based on no less than 15 tests.
   4. Where no previous data are available, the mix or mixes shall exceed design strength as called for in ACI 318.
   5. When consecutive test data, representing compliance under these Specifications, has been established during this project, the overdesign may be relaxed in accordance with ACI 318 at the discretion of the Engineer.
   6. Deviation from any reviewed design mix without written authorization of the Engineer will not be permitted.

E. Concrete for cast-in-place concrete, shall develop a minimum compressive strength of 4,500 psi in 28-days and shall meet the following requirements:
   1. Minimum Cementitious Material
      a) Concrete without fly ash 611 lbs./cy
      b) Concrete with fly ash 540 lbs./cy and fly ash 10% to 25% of cementitious material
   2. Maximum Water/Cement Ratio
      a) 0.45* (by weight, including free moisture on aggregate)
      *If fly ash is used, the water/cement ratio shall be calculated as the weight of water divided by the weight of cement plus the weight of the fly ash.
   3. Air Content 5% ± 1-1/2%.
   4. Water-reducer admixture shall be Type A, D, F, or G. The amount shall be such to control the desired workability and water/cement ratio of the mix.
   5. Slump: 3 to 5-inches with Type A or D admixtures, 4 to 8-inches with Type F or G admixtures. The slump shall be chosen to enhance workability without violating the specified maximum water/cement ratio.
2.04 CONCRETE FORMS

A. Provide wood, plywood, steel or fiber based concrete tubular forms.
   1. Use plywood or steel forms where a smooth form finish is required.
   2. Lumber shall be square edged or tongue-and-groove boards, free of raised grain, knotholes, or other surface defects.
   3. Plywood: PS-1, B-B concrete form panels or better.
   4. Steel form surfaces shall not contain irregularities, dents, or sags.

B. Form Ties and Form-Facing Material: Provide a form tie system that does not leave mild steel after break-off or removal any closer than 2 inches from the exposed surface.
   1. Form ties and accessories shall not reduce the effective cover of the reinforcement.
   2. Form-facing material shall be structural plywood or other material that can absorb air trapped in pockets between the form and the concrete and some of the high water-cementitious materials ratio surface paste. Maximum use is three times.
   3. Provide forms with a form treatment to prevent bond of the concrete to the form.
   4. As an alternate to using an absorptive wood form contact face as a form liner, use a Controlled Permeability Formliner in strict accordance with the manufacturer's recommendations.

2.05 REINFORCEMENT

A. Refer to Section 03 20 00 – Concrete Reinforcement

2.06 MATERIALS FOR CURING CONCRETE

A. Impervious Sheeting: ASTM C 171; waterproof paper, clear or white polyethylene sheeting, or polyethylene-coated burlap.

B. Pervious Sheeting: AASHTO M 182.

C. Liquid Membrane-Forming Compound: ASTM C 309, white-pigmented, Type 2, Class B.

2.07 LIQUID CHEMICAL SEALER-HARDENER COMPOUND

A. Provide magnesium fluosilicate compound which when mixed with water seals and hardens the surface of the concrete. Do not use on exterior slabs exposed to freezing conditions. Compound shall not reduce the adhesion of resilient flooring, tile, paint, roofing, waterproofing, or other material applied to concrete.

2.08 EXPANSION/CONTRACTION JOINT FILLER

A. ASTM D 1751 or ASTM D 1752, 1/2 inch thick, unless otherwise indicated.

2.09 JOINT SEALANTS:

A. Horizontal Surfaces, 3 Percent Slope, Maximum: ASTM D 6690 or ASTM C 920, Type M, Class 25, Use T.

B. Vertical Surfaces Greater Than 3 Percent Slope: ASTM C 920, Type M, Grade NS, Class 25, Use T.
2.10 EPOXY BONDING COMPOUND
A. ASTM C 881. Provide Type I for bonding hardened concrete to hardened concrete; Type II for bonding freshly mixed concrete to hardened concrete; and Type III as a binder in epoxy mortar or concrete, or for use in bonding skid-resistant materials to hardened concrete. Provide Grade 1 or 2 for horizontal surfaces and Grade 3 for vertical surfaces. Provide Class A if placement temperature is below 40 degrees F; Class B if placement temperature is between 40 and 60 degrees F; or Class C if placement temperature is above 60 degrees F.

2.11 OTHER MATERIALS
A. All other materials, not specifically described but required for a complete and proper installation of cast-in-place concrete, shall be as selected and provided by the Contractor subject to the approval of the Engineer.

PART 3 - EXECUTION
3.01 EXAMINATION
A. Verify compacted base course is acceptable and ready for concrete.
B. Verify gradients and elevations of base are correct.

3.02 PREPARATION
A. Inspection:
1. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
2. Verify that all items to be embedded in concrete are in place, properly oriented, located, and secured.
3. Verify that concrete may be placed to the lines and elevations indicated on the Drawings, with all required clearance for reinforcement.

B. Cleaning:
1. Thoroughly clean all areas in which concrete is to be placed to remove all wood debris, sawdust, tie wire cuttings, and all deleterious materials.
2. Clean and roughen existing concrete or concrete from a previous pour to provide a bondable surface.
3. Thoroughly wet concrete forms which have not been treated with oils, waxes, or other bond breakers prior to placing concrete.
4. Clean all transporting and handling equipment of all hardened concrete.

C. Notification:
1. Notify the Engineer at least 24-hours in advance of concrete placement.

3.03 TRANSPORTING AND PLACING CONCRETE
A. Place concrete as soon as possible after mixing in conformance with ACI 304. Concrete shall be plastic and readily workable when placed in the forms. Partially set concrete shall not be retempered for use.
B. Use a method and manner of placing concrete that avoids segregation of the aggregate, or displacement of reinforcement.
C. Limit conveyor belts, when used, to approximately 300-feet in length to prevent segregation. Cover conveyor belts to protect the concrete from sun or rain.

D. Do not use aluminum conduits or tremies for pumping or placing concrete.

E. Place concrete in continuous horizontal layers not exceeding 18-inches, and compact so that there will be no lines of separation between layers.

F. Take care to fill each part of the form by depositing concrete directly to or as near the final position as possible.

G. When concrete must be dropped more than 4-feet into the forms, it shall be deposited through an approved conduit (tremie) or concrete pump.

H. Use the tremie conduit to place concrete in sloping forms or in other locations, as directed, to prevent concrete segregation caused by sliding around reinforcing or other embedments.

I. In general, conduct the method of depositing and compacting concrete so as to form a compact, dense, impervious concrete with the required surface finish without rock-pockets, and a minimum of segregation.

J. Remove defective concrete at the Contractor's expense.

K. Do not place concrete where other work in the area, such as driving piling or sheets, or other vibratory action will occur within the first three days after placement of the concrete. Do not place cast-in-place concrete within 100-feet of pile driving activity.

L. Do not use mechanical vibrators for transporting concrete.

M. Do not add water to concrete on-site without approval of the Engineer.

N. Establish a contained truck wash-out area for use by all trucks delivering concrete to the project. Washout area will be removed upon completion of work.

3.04 FORMING

A. Forms: Formwork shall be provided for all cast-in-place concrete, unless otherwise approved by the Engineer. Forming shall be in accordance with ACI 301. Set forms mortar-tight and true to line and grade.
   1. Chamfer above grade exposed joints, edges, and external corners of concrete 3/4- inch unless otherwise indicated.
   2. Forms submerged in water shall be watertight.
   3. Provide formwork with clean-out openings to permit inspection and removal of debris.
   4. Gasket formwork or otherwise render sufficiently tight to prevent leakage of paste or grout under heavy, high-frequency vibration.
   5. Use a release agent that does not cause surface dusting.
   6. Limit reuse of plywood to no more than three times.
   7. Patch form tie holes with a non-shrink patching material in accordance with the manufacturer's recommendations and subject to approval.

B. Coating: Before concrete placement, coat the contact surfaces of forms with a non-staining mineral oil, non-staining form coating compound, or two coats of nitrocellulose lacquer. Do not use mineral oil on forms for surfaces to which adhesive, paint, or other finish material is to be applied.
C. Assemble formwork to permit easy stripping and dismantling without damaging concrete.
D. Place joint filler vertical in position, in straight lines. Secure to formwork during concrete placement.
E. Removal of Forms and Supports: After placing concrete, forms shall remain in place for the time periods specified in ACI 347, except for concrete placed underwater, forms shall remain in place 48 hours.
   1. Prevent concrete damage during form removal.
   2. Forms may be removed earlier than specified if ASTM C 39 test results of field-cured samples from a representative portion of the structure or other approved and calibrated non-destructive testing techniques show that the concrete has reached a minimum of 80 percent of the design strength.

3.05 CONSTRUCTION JOINTS
A. Joints and stoppages, except as specifically shown on the Drawings, shall generally conform to ACI 318.
B. Locate joints so as not to significantly impair the strength of the structure and only as approved by the Engineer. Thoroughly clean all joints to remove all loose concrete and laitance. Roughen joint surface to a 1/4" amplitude. Unless otherwise noted, wet and coat all cleaned joints with neat cement bond grout immediately before placing fresh concrete.
C. Submit all pre-fabricated construction jointing systems and products for review and approval by the Engineer prior to use.

3.06 COLD AND HOT WEATHER CONCRETING
A. Do not place concrete when the atmospheric temperature drops below 40°F or rises above 90°F, unless special procedures are followed.
B. Follow procedures for production, delivery, placing, curing, inspection and testing of concrete under hot or cold weather conditions in accordance with the recommendations of ACI 305, “Hot Weather Concreting” or ACI 306, “Cold Weather Concreting”.
C. If concrete is placed during cold or hot weather conditions, submit documentation to the Engineer demonstrating how the procedures described in the above referenced ACI documents will be followed. The Contractor's documentation shall be received by the Engineer no later than 72 hours prior to concrete placement.
D. The Engineer’s review of this documentation does not relieve the Contractor's responsibility to provide concrete per the Contract Documents.

3.07 CONSOLIDATING CONCRETE
A. Provide suitable internal vibrators for use in compacting all concrete.
B. Use vibrators of the type designed to be placed directly in the concrete and their frequency of vibration is not less than 7000 impulses per minute when in actual operation.
C. Vibration shall be such that the concrete becomes uniformly plastic.
D. Insert vibrators to a depth sufficient to vibrate the bottom of each layer effectively, but not to a depth that penetrates partially hardened concrete.
E. Do not apply vibrators directly to steel which extends into partially hardened concrete. The intervals between points of insertion shall not be less than 2-feet nor more than 3-feet.
F. Do not continue vibration in any one spot to the extent that pools of grout are formed.

G. In vibrating and finishing top surfaces which are exposed to weather or wear, use extreme care to avoid drawing water or laitance to the surface. In relatively high lifts, the top layer shall be comparatively shallow and the concrete mix shall be as stiff as can be effectively vibrated into place and properly finished.

H. Do not use vibrators to transport or move concrete inside the form.

I. Supply a sufficient number of vibrators to effectively vibrate all of the concrete placed. Hand tamping shall be required wherever necessary to secure a smooth and dense concrete on the outside surfaces.

3.08 CURING CONCRETE

A. Refer to ACI 308 for recommended practices for curing concrete.

B. Maintain concrete (other than high-early strength) above 50°F and in a moist condition for at least the first seven days after placement.

C. Protect all concrete from mechanical injury and accelerated drying. No fire or excessive heat shall be permitted near the concrete at any time.

D. Formed Surfaces: Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.
   1. Normal concrete: Not less than 7 days.

E. Surfaces Not in Contact with Forms:
   1. Start initial curing as soon as free water has disappeared and before surface is dry. Keep continuously moist for not less than three days by water ponding, water-saturated sand, water-fog spray, or saturated burlap.
   2. Begin final curing after initial curing but before surface is dry.
      a) Moisture-retaining cover: ASTM C 171. Seal in place with waterproof tape or adhesive.
      b) Curing compound: ASTM C309. Apply in two coats at right angles, using application rate recommended by manufacturer.

3.09 FINISHING CONCRETE

A. General:
   1. All permanently exposed surfaces, unless specifically noted otherwise, shall be free from local bulging and all unsightly ridges or lips shall be removed to leave a smooth, flat surface. Excessive rubbing will not be permitted.
   2. Patching mortar, if used, shall be of the same color as the surrounding concrete. Add white Portland cement to patching mortar for color matching purposes.
   3. Provide 3/4-inch chamfer on all exposed corners.

B. Walls and Vertical Surfaces:
   1. Immediately after removal of form or absorptive form lining, inspect concrete surfaces for defects.
   2. Repair all defects, voids, defective concrete, and tie rod holes immediately after the forms are removed unless otherwise directed by the Engineer.
3. Form Finish: Provide smooth-form finish per ACI 301. Rub down or chip off fins or other raised areas 1/8 inch (6 mm) or more in height.

4. Remove (chip out) and patch all exposed tie wire.

5. The concrete used for repairing shall be of such quality that it can be thoroughly bonded to the adjacent concrete. Use an approved epoxy-type mortar for all repair work, applied per manufacturer's instructions and by experienced and qualified workmen.

6. Repair all defects no later than 48-hours after form removal.

C. Horizontal Surfaces:

1. Thoroughly roughen all horizontal surfaces that will carry additional concrete to an amplitude of 1/4-inch and clean of all laitance and unsatisfactory concrete.

2. Exterior concrete surfaces exposed to foot or vehicle traffic except as noted shall be given a broom finish per ACI 301 perpendicular to the direction of traffic.

3. Interior concrete surfaces shall receive a troweled finish per ACI 301.

4. Related unformed surfaces: Tops of walls and similar unformed surfaces occurring adjacent to formed surfaces shall be struck smooth after concrete is placed and shall be floated to a texture reasonably consistent with that of the adjacent formed surfaces. Final treatment of formed surfaces shall continue uniformly across the unformed surfaces.

D. Protection of Finish:

1. Take every precaution to protect finished surfaces from stains or abrasions.

2. Properly protect all surfaces or edges likely to be damaged during the construction period.

3.10 TESTING

A. Testing of concrete material will be done by the Engineer. Methods of sampling, testing, evaluation, and acceptance will conform to ACI 301. All fresh concrete samples intended for testing will be taken at the point of deposit into the formwork.

B. Testing, as described above, will be at Engineer's discretion and in no way relieves the Contractor of any obligations.

C. Tests will be performed at no cost to the Contractor, except as noted. The following services shall be performed, when necessary, at Contractor's cost:

1. Additional testing and inspection required because of changes in materials, proportions, and procedures requested by the Contractor.

2. Additional testing of materials or concrete occasioned by their failure by test or inspection to meet Specification requirements.

D. If any delivered load of concrete is rejected, dispose of completely off-site.

3.11 TOLERANCES

A. Maximum Variation of Surface Flatness: 1/4 inch in 10 ft.

B. Maximum Variation from True Position: 1/4 inch.
3.12 PROTECTING CONCRETE

A. Immediately after placement, protect concrete from premature drying, excessive hot or cold temperatures, and mechanical injury.

B. Do not permit pedestrian traffic over concrete for 7 days minimum after finishing.

C. Do not permit vehicular traffic over concrete until 80 percent design strength of concrete has been achieved.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE
A. Furnish precast concrete manhole sections, vaults, and catch basins as shown on the drawings.
B. Furnish all necessary material, labor, and equipment for precast concrete products including manufacture, transportation, erection, reinforcing steel, miscellaneous steel and embedded items and other related work as required for a complete installation.
C. Furnish and apply non-shrink grout to annular spaces between pipes or conduits and structures, and as fill and patching material.

1.03 REFERENCES
A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.
B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.
C. American Concrete Institute (ACI)
   1. ACI 318 - Building Code Requirements for Reinforced Concrete
D. American Society for Testing and Materials (ASTM)
   2. ASTM C 469 - Standard Test Method for Static Modulus of Elasticity and Poisson's Ratio of Concrete in Compression
   3. ASTM C 1202 - Standard Test Method for Electrical Indication of Concrete's Ability to Resist Chloride Ion Penetrations
E. Precast Concrete Institute (PCI)
   1. PCI MNL-116 - Manual for Quality Control for Plants and Production of Structural Precast Concrete Products
F. Washington State Department of Transportation (WSDOT)
1.04 SUBMITTALS

A. Submit the following in accordance with Section 01 33 00 – Submittal Procedures for the following products:

1. Submit complete plant QC plan, proof of current Precast Concrete Institute (PCI) Certification and a letter demonstrating conformance with the requirements of PCI MNL-116. The plan shall include the names and qualifications of individuals having responsibility for product quality control and shall include specific reference standards used for quality control.

2. Shop drawings for all shop and erection details, including position and quantities of embedded items. Shop drawings shall also indicate the concrete compressive strength. Shop drawings shall clearly indicate the structure dimensions, and intended depth of installation, for a base slab to be provided under structures, if applicable, in order to provide the specified surface load capacity and/or buoyancy requirements indicated on the drawings. Calculations and drawings shall be prepared and stamped by a professional engineer registered in the State of Washington.

3. Mill certificates indicating specification compliance regarding strength and chemistry of reinforcing steel to be furnished.

4. Test reports and concrete mix designs indicating Specification compliance of concrete materials, admixtures, and strengths. Test results shall include gradation and hardness of aggregate, tendency of aggregate to react with cement and form alkali-silica reaction (ASR), and cement type and chemistry.

5. Manufacturing data for concrete temperature during curing.

6. Manufacturer's data sheets for all repair products, procedures and materials, including epoxy grout used for patching voids at lifting devices.

7. Repair procedures for spall, delamination and patch repairs. Repair procedures shall identify repair products and include repair product cut-sheets.

B. Do not start fabrication until the shop drawings and other submitted data are reviewed and approved by the Engineer and the shop drawings have been returned to the Contractor.

1.05 QUALITY ASSURANCE

A. Acceptable Manufacturers:

1. A company specializing in providing precast concrete products and services normally associated with the industry for at least five years.

2. Submit written evidence to the Engineer to show experience, qualifications, and adequacy of plant capability and facilities for performance of contract requirements, including proof of plant certification by the Precast Concrete Institute (PCI).

3. Upon request by the Engineer, the manufacturing facility shall be made available for inspection.

B. Testing:

1. The Contractor shall be responsible for testing of precast concrete items. Precast concrete materials, manufacturing, testing, quality control, record keeping, and tolerances shall be in accordance with the provisions of PCI MNL-116.
C. Inspection:
   1. All precast units may be inspected by the Engineer at the casting yard. All damaged and/or otherwise defective units will be rejected whether the defect was identified at the casting yard or upon arrival at the project site. The Contractor shall provide all necessary assistance and access in carrying out such inspections and tests at its own expense.

PART 2 - PRODUCTS

2.01 CONCRETE FORMING
   A. See Section 03 30 00 – Cast-in-Place Concrete

2.02 CONCRETE REINFORCING
   A. See Section 03 20 00 – Concrete Reinforcement

2.03 CONCRETE MIXES AND STRENGTHS
   A. See Section 03 30 00 – Cast-in-Place Concrete
   B. Vaults, manholes, catch basins, handholes and other precast, non-prestressed concrete structures used for below grade construction shall be designed to accommodate the load conditions indicated on the plans: See Design Criteria noted on plans for load capacity requirements.

2.04 CONCRETE REPAIR MATERIALS
   A. Spall, delamination and patch repairs shall be made only with the approval of the Engineer. When permitted, make repairs using polymer-modified patching mortars suitably formulated for the depth and dimensions of the patch. The following minimum performance data apply to the hardened repair mortar:

<table>
<thead>
<tr>
<th>CHARACTERISTIC</th>
<th>28-DAY VALUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Compressive Strength (ASTM C 109)</td>
<td>Same as substrate concrete (min.)</td>
</tr>
<tr>
<td>2. Bond Strength (ASTM C 882)</td>
<td>2,200 psi (min.)</td>
</tr>
<tr>
<td>3. Elastic Modulus (ASTM C 469)</td>
<td>4.0E6 psi (min.)</td>
</tr>
<tr>
<td>4. Coefficient of thermal expansion (40°F to 100°F):</td>
<td>6.0x10-6 in/in/degree F (Max.)</td>
</tr>
<tr>
<td>5. Permeability (ASTM C 1202)</td>
<td>&lt;1,000 coulombs (Max.)</td>
</tr>
</tbody>
</table>

   B. Use bonding agents and/or corrosion preventative coatings as recommended by the repair product manufacturer’s recommendations.

   C. Repair all cracks using low pressure injection of an approved low viscosity epoxy.

2.05 FABRICATION
   A. General: Manufacturing procedures in compliance with PCI MNL-116.
   B. Formwork: Construct forms to maintain units within specified tolerances. Thoroughly clean forms after each use.
   C. Concrete Work:
      1. See Section 03 30 00 of these Specifications for mixing, placing, and consolidating requirements.
      2. Cast each precast unit in one operation with no cold joints. Chamfer edges using 3/4-inch chamfer strip.
D. Curing:

1. Maintain precast structural units in a saturated atmosphere until the concrete in the unit has reached its release strength. A saturated curing atmosphere is one that provides a relative humidity of 90% or greater.

2. With the approval of the Engineer, the curing time may be shortened by heating the outside of the forms using either radiant heat, convection heat, conducted steam, or hot air. If steam is used, envelop the entire unit (including forms) with saturated steam.

3. If approved for use, all heat curing methods shall:
   a) Keep all unformed member surfaces in a saturated atmosphere throughout the curing time;
   b) Embed a thermocouple (linked to a thermometer accurate to plus or minus 5° F) 6 to 8-inches from the top or bottom of the member on its centerline and near its midpoint;
   c) Monitor with a recording sensor (accurate to plus or minus 5° F) arranged and calibrated to continuously record, date, and identify concrete temperature throughout the heating cycle;
   d) Make this temperature record available for the Engineer to inspect;
   e) Heat concrete to no more than 100° F during the first two hours after pouring the concrete, and then increase no more than 25° F per hour to a maximum of 150° F;
   f) Cool concrete, after curing is complete, no more than 25° F per hour, to 100° F; and
   g) Keep the temperature of the concrete above 60° F until the member reaches release strength.

E. Finish: Leave areas to receive additional concrete clean and rough with a minimum amplitude of 1/4-inch. Provide all other exposed concrete surfaces with wood float finish.

F. Precast Unit Manufacturing Tolerances:

1. Length: +3/4-inch
2. Width: +1/4-inch
3. Thickness: +1/4-inch
4. Horizontal alignment (sweep): 1/4-inch maximum

2.06 GROUT

A. Non-shrink grout shall be Grout Type 2 in accordance with WS DOT Standard Specifications, Section 9-20.3(2).

PART 3 - EXECUTION

3.01 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling:

1. Lift and support precast concrete units during manufacturing, stockpiling, transporting, and erection operations only at the lifting or supporting points, or both, as shown on the submittals, and with approved lifting devices.
2. Perform transportation, site handling, and erection with qualified personnel using equipment and methods capable of suspending and supporting precast concrete units without overstress.

3. Exercise extreme care during all handling operations. Repair all damaged units at no cost to the Owner. Remove and replace all units damaged beyond repair at no additional cost to the Owner.

B. Concrete Repair
   1. Bring any damage or defects in the precast units to the attention of the Engineer.
   2. Precast units having voids, segregated porous concrete, honeycomb, or fractures will be rejected. Rejected units shall become the property of the Contractor and shall be disposed.
   3. In the event that the Engineer permits repairs to be made to the precast unit, then execute all concrete repairs in conformance with repair product and manufacturer's instructions.

C. Storage
   1. Support all units to avoid cracking, distortion, staining or other physical damage.
   2. Store all units off ground.
   3. Place stored units so that identification marks are discernible.
   4. Separate stacked members by battens across full width of each bearing area.
   5. Stack so that lifting devices are accessible and undamaged.
   6. Do not use upper member of stacked tier as storage area for shorter member or heavy equipment.

3.02 INSTALLATION
   A. General: Do not install precast units until the concrete has attained the minimum specified design strength and only after a minimum of 14-days after concrete placement.
   B. Preparation: Provide true, level bearing surfaces on all field-placed units.
   C. Installation: Lift units by means of suitable lifting devices at points provided by the manufacturer. Set units as indicated on the Drawings. Align and level units as required.
   D. Patching: Cut off lifting devices and fill voids with an approved non-shrinking grout.
   E. Pipe and Conduit Penetrations: Fill annular space between pipe and manhole, conduit and handhole, conduit and vault with non-shrinking grout in accordance with manufacturer's instructions.

3.03 INSPECTION
   A. Erected precast units may be inspected by the Engineer to verify conformance with the Drawings and this Specification.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The work includes excavation, trenching, backfill, and shoring of upland areas associated with utility demolition, utility installation, and paving as indicated on the Drawings and in the Specifications.

B. The site may contain contaminated/hazardous soil and groundwater. Contractor shall monitor soil and groundwater by instructing workers in observing and reporting questionable materials, odors, oily sheen or color on soils and water, and oily or chemical odors. If unexpected hazardous or contaminated materials are encountered, Contractor shall stop work in that area immediately and notify the Engineer.

2. WAC Ch. 173-303 - Dangerous Waste Regulations
3. WAC Ch. 296-155 - Safety Standards for Construction Work.

G. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS
A. Submit the following in accordance with Section 01 33 00 – Submittal Procedures for the following products:
   1. Test reports for the following:
      a) Sieve analysis and proctor data of materials used for backfill and select fill.
      b) Sources of all imported material and certification that materials are clean and free of contamination.

B. The Contractor shall submit daily excavation reports to the Engineer as part of the Contractor’s Daily Construction Report. Forms to be used shall be submitted to the Engineer for approval prior to use.

1.05 DEFINITIONS
A. Suspect Excavated Soil – shall include any soils that have an odor, sheen, or color typical of soil containing regulated materials.

B. Non-Suspect Soils – shall include any soils that DO NOT have an odor, sheen, or color typical of soil containing regulated materials.

C. Regulated Materials are defined as materials or combinations of materials containing hazardous or dangerous wastes as defined under state laws, federal laws, or under the Model Toxics Control Act listed in WAC 173-340-900, Table 740-1, which exceed the Method A cleanup levels for unrestricted land use.

1.06 QUALITY ASSURANCE
A. Unless otherwise specified, the Engineer will provide testing and inspection services. The Contractor may obtain test results from the Engineer at no cost. Tests conducted for the sole benefit of the Contractor, or before a product is approved, shall be at the Contractor’s expense.

B. Contractor shall perform and pay for all test reports on imported material
C. Sampling and testing for compliance with the Contract provisions will be in accordance with Section 01 45 00 – Quality Control.

1.07 SITE CONDITIONS

A. Subsurface investigations have been made at the project site. The geotechnical report developed by Hart Crowser as part of this project entitled “Terminal 3 & 4 Backlands Redevelopment - Gate Complex”, dated September 22, 2017 is provided in Appendix A of the Project Manual.

B. Existing Utilities
   1. The Contractor shall verify the location of existing utilities. Contact the Washington Utilities Underground Location Center at 1-800-424-5555 (or 811) for utilities within the public right of way and on Port property. The Contractor shall provide private utility locating services for utility locating on Port property.
   2. The Contractor shall protect from damage those utilities which are to remain. Utilities damaged by the Contractor shall be repaired at no cost to the Owner.

C. Groundwater
   1. Anticipate encountering groundwater at any location within the project site. The groundwater elevation may vary depending upon proximity to the shoreline, soil conditions, tidal conditions, and weather. See section 31 23 19 – Dewatering.

D. Soils Containing Regulated Material
   1. Soil sampling has been performed at the project site. A memorandum entitled “Terminal 3 & 4 Gate Complex and Backland Reconfiguration Site Development Environmental Constraints”, dated November 7, 2017 is provided in Appendix A of the Project Manual.

PART 2 - PRODUCTS

2.01 CHARACTERIZATION TESTING, REPORTING, AND CERTIFICATION

A. Materials shall be of the quality, size, shape, gradation, or equal to that manufacture as specified herein.

B. Provide and pay for source characterization, testing, reporting, and certification for all off-site borrow materials as described below. Provide documentation for the Engineer’s approval demonstrating that all imported materials from a borrow pit meet the contract requirements and certify that the materials are free of regulated materials.

C. Provide the following information with each sample submitted:
   1. Material Source
   2. Proposed On-site Use
   3. Sampling dates
   4. Chain of custody
   5. Sampling locations
   6. Contractor’s certification that the samples submitted are representative of the materials that shall be reused at the site.
**D. Characterization Testing** shall be conducted at a laboratory accredited under WAC Chapter 173-50, and shall include:

1. Grain Size Distribution (ASTM D 422)
2. Maximum Dry Density (ASTM D1557)
3. Weight per unit volume of uncompacted material (ASTM C 29)

**2.02 ON-SITE BACKFILL**

A. Excavated in-situ soils generated during site construction activities may be used or reused as backfill material, if approved by the Engineer. It is to be assumed that all excavated in-situ material will be found acceptable for reuse.

1. Submit a written request for use of on-site borrow materials at least 1 week prior to onsite placement. Identify the source of the excavated material, proposed on-site use, and quantity of material to be used.
2. Provide samples of the material for physical and/or chemical characterization as requested by the Engineer. The material shall not be reused at the site until approved by the Engineer.
3. Characterization and characterization testing of excavated materials proposed for reuse may be performed by the Engineer, to assure that backfill materials are free of regulated materials and the material meets the requirements of the contract documents.

B. The Engineer may reject any materials that have been determined to be substandard or suspect to contain regulated materials. One or more of the tests listed in these specifications may be required prior to acceptance.

**2.03 GRAVEL BACKFILL**

A. If the Engineer determines the site conditions require Gravel Backfill, then Gravel Backfill shall meet the requirements of WSDOT Standard Specifications Section 9-03.12(2) – Gravel Backfill for Walls, with the following exceptions:

1. The amount of material passing the 4-inch screen shall be 100 percent.

**2.04 CRUSHED ROCK BASE**

A. Crushed rock base material shall be clean, well graded granular material meeting the requirements of WSDOT Standard Specifications Section 9-03.9(3) – Crushed Surfacing - Base Course, with the following exception:

1. The amount of material passing the No. 200 sieve shall not exceed 5 percent.

**2.05 GRAVEL BACKFILL FOR PIPE ZONE BEDDING**

A. Pipe zone bedding material shall be clean, well graded granular material meeting the requirements of WSDOT Standard Specifications Section WSDOT Section 9-03.12(3), with the following exception:

1. The amount of material passing the No. 200 sieve shall not exceed 5 percent.
2.06 FLOWABLE FILL BASE COURSE
   A. Flowable fill base course shall contain a minimum of 94 lb Type 1 cement per cubic yard. The
      flowable fill shall be uniform, excavatable, flowable, cohesive, non-bleeding, low strength
      concrete mix, containing a stable air generator and maximum aggregate size of 3/8”.
      Proportion flowable fill mix design so in-place strength does not exceed 200 psi during the life
      of fill and mix sets within six hours of placement.

2.07 CDF FOR TRENCH BACKFILL
   A. CDF for trench backfill shall contain 30 lbs Type 1 cement per cubic yard. The CDF shall be
      uniform excavatable, flowable, cohesive, non-bleeding, low strength concrete mix, containing
      a stable air generator and maximum aggregate size of 3/8”. Slump shall not exceed 7-inches.
      Proportion the mix design to provide a minimum 28-day strength of 50 psi and a maximum
      strength of 100 psi when tested in accordance with ASTM D 4832.

2.08 UNDERGROUND MARKING TAPE
   A. Underground marking tape shall consist of inert polyethylene plastic, 4-mil thickness that is
      impervious to all known alkalis, acids, chemical reagents and solvents likely to be
      encountered in the soil, with a metallic foil core to provide a positive detection for pipeline
      locators.

2.09 QUARRY SPALLS
   A. Quarry Spall material shall meet the requirements of WSDOT Standard Specifications Section

2.10 GEOTEXTILE FABRIC
   A. Geotextile Fabric shall meet the requirements of WSDOT Standard Specifications Section 9-
      33.1 – Geosynthetic Material Requirements, Table 3, for Soil Stabilization, Woven.

PART 3 - EXECUTION

3.01 GENERAL
   A. Excavating and grading shall be completed within the tolerances established or within
      reasonably close conformity with the alignment grade and cross sections indicated on the
      Drawings or Specifications.
   B. Excavation: Homogeneous or mixtures of naturally occurring earth, fill, sand, gravel, stones,
      clays, or loam, moved to facilitate the construction of structures, utilities, trenches, and
      associated work.
      1. Excavation material shall be moved with the use of mechanical equipment, such as
         shovels, clamshells, loaders, bulldozers, graders, rippers, etc., but shall not require
         drilling and blasting or drilling and line breaking.
      2. Excavation by sluicing method will not be permitted.
   C. Protect excavated material, stockpiled for reuse as backfill, from contamination by other
      materials and from weather damage by covering with waterproof sheeting and other effective
      means. Any material not properly protected which becomes unsuitable or contaminated shall
      be replaced at no additional cost to the Owner.
D. Separate stockpiles shall be employed for material to be reused as backfill, unsuitable material, and suspect material. At the end of the project, any material remaining in temporary “material acceptable for reuse” stockpiles shall be considered surplus / excess material, and following testing of material by the Engineer, Contractor shall haul excess material off-site to an Engineer approved disposal facility that is appropriate for the material being disposed. Disposal of material off-site prior to end of project, when there is still potential the material may be needed for backfill, shall first be approved by the Engineer.

3.02 SUSPECT AND NON-SUSPECT MATERIALS, SAMPLING, TESTING, AND DISPOSAL

A. All excavated materials will be inspected and categorized as suspect or non-suspect by the Engineer. Soil will be considered suspect if it has an odor, sheen, or color typical of soil containing regulated materials.

B. All suspect materials shall be stockpiled and segregated by the Contractor from other stockpiles or materials by the Contractor. The Engineer will provide and pay for sampling and characterization testing for all suspect materials prior to reuse or removal from the site. Allow 10 calendar days for Engineer testing and direction to the Contractor.

1. Suspect soils characterized to be free of regulated materials, and meeting the requirements of the contract documents, may be reused on-site provided it is suitable for its intended use, as determined by the Engineer.

2. Suspect soils characterized to contain regulated materials shall be loaded by the Contractor into trucks and disposed of at an Engineer approved disposal facility capable of receiving regulated material, as described in Section 01 35 43.19 Export Soil Management. Work and costs related to transporting and disposing of said material will be considered Changed Work.

C. All non-suspect soils shall be stockpiled by the Contractor, but segregated from suspect soils, and may be reused on-site provided they are suitable for the intended use, as determined by the Engineer.

1. The Engineer will provide and pay for sampling and characterization testing for all non-suspect materials prior to reuse or removal from the site. Allow 10 calendar days for Engineer testing and direction to the Contractor soils characterized to be free of regulated materials, and meeting the requirements of the Contract Documents, shall be considered the same as non-hazardous excess material.

2. Surplus non-suspect soils shall be loaded, transported, hauled, and disposed of off-site in accordance with the Section 01 35 43.19 and applicable laws and regulations.

3.03 EXCAVATION FOR STRUCTURES AND UTILITIES

A. All foundations and utility structures shall be founded on compacted subgrade. Excavated material may be reused if it meets the requirements for fill, or as approved by the Engineer. Compact fill material as specified.

B. Brace and shore sides of excavations. Comply with all federal, state, and local regulations regarding shoring, bracing, and other protection requirements.

C. Keep water out of excavated pits and trenches by pumping or other means of dewatering. Water level shall be kept below the bottom of concrete pours before, during, and for a minimum of three days thereafter.
D. Protect excavated material, stockpiled for use as backfill, from contamination by other materials and from damage by weather by covering with waterproof sheeting or other suitable means, as approved by the Engineer.

E. Take appropriate steps to prevent damaging adjacent structures during excavation.

F. Unsuitable Structural and Trench Excavation: Unsuitable materials (if encountered) shall be excavated to the depth designated by the Engineer. Unsuitable material shall be replaced with gravel base material, or other materials approved by the Engineer.

3.04 CONTAMINATED/HAZARDOUS SOILS AND GROUNDWATER

A. Contractor shall monitor soils and groundwater by instructing workers in observing and reporting questionable materials, odors, oily sheen or color on soils and water, and oily or chemical odors. If unexpected hazardous or contaminated materials are encountered, Contractor shall stop work in that area immediately and notify the Engineer.

3.05 EXPORT MATERIAL

A. Material to be exported from the site must be stockpiled and characterized prior to offsite disposal. The Contractor will stockpile material at a location onsite as directed by the Engineer. Stockpiled material shall be placed on the pavement, covered with plastic sheeting and anchored to prevent rain water from contacting material. Refer to Paragraph 3.02 for characterization and disposal requirements. Contractor shall base their bid on the assumption that excavated material is not regulated.

3.06 FILL AND BACKFILL FOR STRUCTURES AND UTILITIES

A. Place fill to lines and grades indicated on the Drawings.

B. Remove water from excavated areas, by pumping or other means, before placing any fill material.

C. Refer to the geotechnical report provided in Appendix A for over excavation requirements.

D. Compact subgrade before placing any fill material.

E. Do not place any fill against concrete walls/structures until the concrete has attained its specified design strength and/or certain other construction sequence criteria, if noted on the Drawings, are met, or as specifically approved by the Engineer.

F. Place fill in layers not exceeding 6 inches (loose thickness) Gravel backfill shall be used for materials placed beyond the limits defined for structural excavation.

G. Do not place any backfill above CDF backfill until the CDF has attained its minimum specified design strength.

3.07 COMPACTION

A. Compaction shall be performed with approved compaction equipment suited to the soil and the area being compacted. Moisten or aerate material as necessary to provide the moisture content that will readily facilitate obtaining the specified compaction with the equipment used. The moisture content of fill material shall be within 2 percent of the optimum moisture content at the time of compaction.

B. Each lift of material placed shall be uniformly compacted to the density indicated in these Specifications. The percent of density required is in relation to the maximum density obtainable at optimum moisture content (Compaction Control Density) as determined in Section 3.08 “Compaction Control Tests.”
C. Compact subgrade and backfill to at least 95% of the Modified Proctor maximum dry density as determined by ASTM D 1557.

3.08 COMPACTION CONTROL TESTS
A. Laboratory and field tests shall be performed by the Engineer:
B. Compaction control density shall be the maximum density at optimum moisture content as determined by ASTM D-1557, Standard Methods for Moisture-Density Relationships of Soil and Soil Aggregates, Methods A, B, C or D as applicable.
C. Field tests to determine in-place compliance with required densities as specified, shall be performed in accordance with ASTM D1556, D2167, or D2922.

3.09 PREPARATION OF SUBGRADE
A. Preparation of Subgrade
1. Immediately prior to placement of surfacing materials, clean the entire width of the area of all debris and dispose of as directed by the Engineer. All depressions or ruts which contain storm water shall be drained.
2. Shape the entire subgrade to a smooth uniform surface, true to line, grade, and cross section. Thoroughly compact the material for a depth of twelve inches below the subgrade to 95% of the maximum density as determined by compaction tests ASTM Designation D1557. If soft or spongy material underlying the upper twelve inches of the area being prepared precludes satisfactory compaction of the upper twelve inches, loosen, aerate, or excavate, replace and compact to the required density as directed by the Engineer.
3. Remove and dispose of excess. Subgrade areas deficient in materials shall be brought to grade by importing suitable materials. Materials added to subgrade areas deficient in materials shall be watered and compacted as necessary to yield a true finished subgrade as described above.
4. Once it is prepared, maintain the subgrade for surfacing in the finished condition until the first course of surfacing has been placed.

B. Finishing Subgrades
1. Before any paving material is placed, bring the subgrade to the proper line, grade and cross section and maintain until the base course and paving is placed, except that extra depth of subgrade for increased thickness of the pavement, for pavement anchors, for pavement headers, and for increased thickness at the edges of the pavement may be removed just before the pavement is placed.
2. Compact the subgrade for pavement to 95% of maximum dry density as determined by compaction tests ASTM D1557, to a minimum depth of six inches and to a width that will accommodate the paving equipment.

C. Subgrade Protection
1. Take all precautions necessary to protect the subgrade (including utility backfills and exposed excavation surfaces) from damage.
2. Protect the exposed excavation areas from excessive wetness due to rainfall. Protection measures may include covering with plastic or other means.
3. Where approved compacted subgrades are disturbed by subsequent operations or adverse weather, scarify the subgrades and compact to the required density prior to further construction thereon.

3.10 TRENCH EXCAVATION
A. The Contractor shall maintain, at all times during the execution of this work, safe and stable excavations. All trench excavation and preparation for trenching shall comply with applicable requirements of Section 7-08.3(1) of the WSDOT Standard Specifications.
B. Where excavations exceed 4 feet in depth, the Contractor shall provide and maintain trench excavation safety systems in accordance with RCW 39.04.180.
C. The Contractor’s trench safety system shall be designed by a qualified person and meet the referenced requirements.

3.11 TEMPORARY TRENCH COVERS
A. Maintain vehicular traffic at and around trench work as required for the phasing indicated on the Drawings. Provide temporary steel plate trench covers of sufficient thickness to support the typical traffic loads present at the site based on span dimension across trenches. To facilitate coordination with the terminal operator, the Contractor shall notify the Engineer at least 7 days prior to trenching and the installation of trench covers in vehicular areas.
B. Temporary trench covers are to be removed as soon as underground utility work is completed in accordance with the requirements of Section 7-08.3(1) of the WSDOT Standard Specifications to allow backfill and compaction work.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. This Section includes on-site temporary stockpiling and loading of excavated materials for transport to the appropriate waste disposal facility.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures
B. Section 01 34 43.19 – Export Soil Management
C. Section 31 00 00 – Earthwork

1.03 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.
B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.
C. American Society for Testing and Materials (ASTM)
   1. ASTM D 792 – Standard Test Method for Density and Specific Gravity of Plastics by Displacement
   2. ASTM D 1238 – Standard Test Method for Melt Flow Rates of Thermoplastics by Extrusion Plastometer
D. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS

A. Submit materials data in accordance with Section 01 33 00 – Submittal Procedures. Furnish manufacturers’ technical literature, standard details, product specifications, and installation instructions for all products.
B. Submittals shall include the following:
   1. Prior to the initiation of earthwork activities, provide the Engineer with a Soil Stockpile Plan that includes locations and dimensions of temporary stockpile areas for excavated soils, construction details of the stockpile cells, and plans for segregating dry or moist soil from saturated soil and suspected contaminated soil from non-suspected soil. The Soil Stockpile Plan shall provide detail on the truck loading and truck staging areas.

1.05 SOILS CONTAINING REGULATED MATERIAL

1. Refer to Section 01 34 43.19 – Export Soil Management and Section 31 00 00 – Earthwork for sampling, testing, and disposal requirements of soils containing regulated materials.
PART 2 - PRODUCTS

2.01 MATERIALS

A. Furnish all materials, equipment, and labor required for the construction and maintenance of stockpiles.

B. Stockpile bottom liners are required for suspected contaminated soil and saturated suspected clean soil. Bottom liners shall have a minimum thickness of 40 mils, shall consist of high-density polyethylene (HDPE), and shall be resistant to weathering and degradation due to contact with contaminated materials for the duration of the Project work. The liner shall be furnished with prefabricated shop welded seams or seams welded in accordance with the manufacturer’s recommendations. Dimensions may be maximized to provide the largest manageable sheet.

1. The HDPE liner for the stockpiles shall be manufactured of polyethylene resins and shall be compounded and manufactured specifically for the intended purpose. The resin manufacturer shall certify each lot for the following properties.

<table>
<thead>
<tr>
<th>Property</th>
<th>Test Method</th>
<th>HDPE Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Density (g/cc)</td>
<td>ASTM D 1505 or ASTM D 792</td>
<td>0.935 – 0.940</td>
</tr>
<tr>
<td>Melt Index (g/10 min.)</td>
<td>ASTM D 1238 Condition E</td>
<td>&lt;0.40</td>
</tr>
</tbody>
</table>

2. The geomembrane shall be a minimum 23.0 feet seamless width. Carbon black shall be added to the resin if the resin is not compounded for ultra-violet resistance.

3. The surface of the smooth geomembrane shall not have striations, roughness, pinholes, or bubbles.

4. The geomembrane shall be supplied in rolls. Labels on each roll shall identify the thickness of the material, the length and width of the roll, lot and roll numbers, and name of manufacturer.

5. Once the liner is in place and the stockpile area ready to receive/store material, the Contractor shall install a cushioning layer to protect the liner in accordance with the liner manufacturer’s recommendations. This layer can consist of onsite waste as long as it meets the liner manufacturer’s recommendations. Leave this cushioning layer over the liner during operations to protect the liner from tear by stockpiling and loading operations. Should the liner be torn, the Contractor shall immediately repair the tear and not allow contaminated material or run-off to escape the stockpile.

C. Stockpile covers shall be 6-mil (minimum thickness) black or clear reinforced polyethylene sheeting. The stockpile cover sheets shall be of sufficient length and width to completely and fully cover all of each stockpile with no more than two sheets.

D. Stockpile covers and liners shall be free of holes or tears. Defective material shall be immediately repaired or replaced and not allow leakage or escape of material from the stockpile area, as determined by the Engineer.
E. Furnish sand bags or other devices as approved by the Engineer of sufficient quantity and weight and with sufficiently close spacing to completely and fully hold the stockpile cover in position. Only clean, uncontaminated material shall be used to weigh down the covering; stockpile material shall not be used for cover weight. In particular, the edges of the stockpile cover shall be adequately anchored to completely trap the material within.

PART 3 - EXECUTION

3.01 STOCKPILING – GENERAL

A. Coordinate stockpiling and stockpile maintenance work with excavation work as specified in Section 31 00 00 – Earthwork

B. Establish separate stockpiles for dry/moist suspected clean soil, saturated suspected clean soil, and suspected contaminated soil.

C. The frequency of material sampling will depend upon the requirements of the waste disposal facility. It shall be the responsibility of the Contractor to conduct and coordinate any sampling requirements MANDATED BY the waste disposal facility.

D. Stockpiling shall be allowed within site boundaries.

E. The Contractor shall be responsible for constructing and maintaining all stockpiles, furnishing all waste containers, and for the inspection, maintenance, modification, and repair of stockpiles and waste containers required for this work.

F. Line bottom of stockpiles as outlined in these Specifications. Provide stormwater run-on control, manage all drainage from stockpiles, prevent rain, stormwater, and surface water from contacting material contained in the stockpiles. Cover stockpiles during lengthy periods of inactivity while on site, at the end of each work day, just prior to and during periods of precipitation, and as necessary to control dust, erosion and odors.

G. The edges of the stockpiles shall be located no closer than 10 feet from the designated Project perimeter and 20 feet from top of bank.

3.02 STOCKPILE CONSTRUCTION

A. Prepare the designated area for stockpile construction in accordance with these Specifications:
   1. Clean and remove debris from the stockpile footprint, prepare a smooth surface (existing concrete pad, or compacted sand leveling layer incorporating geotextile, as needed) that meets the liner manufacturer’s recommendations.
   2. Stockpile berms (or Ecology Blocks) shall be firm, non-yielding and stable. Bottom liner shall cover entire berm and be placed such that all drainage from the stockpile is contained within the stockpile cell.
   3. Install bottom liner to fully cover the smooth ground surface for each stockpile. Field seaming, if necessary, shall be completed in accordance with the liner manufacturer’s recommendations to provide a water tight seam. Simple overlapping of seams without sealing is not allowed. Anchor the liner adequately to prevent displacement. Monitor and maintain liner integrity. Immediately repair tears or punctures where damaged.
B. Install stockpile cover in a manner that minimizes wrinkles and provides for a straight placement. All seams shall be taped or weighted down full length and there shall be at least 4 feet of overlap of all seams. Place sandbags or other pre-approved clean weighted objects on the cover at sufficiently close spacing to prevent uplift from wind. The toe of slopes shall be tightly secured and covered by the sheeting.

C. Protect the cover from damage. Remove and replace damaged polyethylene sheeting as needed or if directed by the Engineer.

3.03 STOCKPILING OF MATERIALS

A. The Contractor shall prepare the stockpile cells in accordance with the details outlined in these Specifications.

B. No construction equipment shall be allowed to drive directly over geomembrane liners without first bedding the liner surface with at least 12 inches of soil that meets the requirements of the liner manufacturer.

3.04 STOCKPILE MANAGEMENT

A. Saturated and suspected contaminated soil shall be placed only in properly constructed and maintained stockpiles.

B. Prevent dust from the stockpiles from becoming airborne. Place and anchor stockpile covers during lengthy periods of inactivity while on site, at the end of each work day, just prior to and during periods of precipitation, and to control dust, erosion and odor.

C. Provide run-on controls to divert storm water and precipitation away from stockpiles. Collect accumulated leachate from lined stockpile areas and manage the water as outlined in Section 31 23 19 – Dewatering.

D. Install and maintain legible signs at conspicuous locations immediately adjacent to all stockpiled materials clearly indicating the nature of stockpiled materials, e.g., suspected contaminated soil, etc.

3.05 STOCKPILE INSPECTION

A. The Contractor shall inspect stockpiles daily to document and affirm the integrity and maintenance of the stockpile liner and cover system.

B. Any deficiencies noted by the Engineer or Contractor shall be immediately corrected to the satisfaction of the Engineer.

3.06 LOADING

A. The Contractor shall provide equipment and labor to load all trucks for transport and disposal of materials excavated from the Project as specified in this document.

B. Coordinate with the waste disposal facility for truck unloading of contaminated materials for the Project site as required.

C. The Contractor shall bear full responsibility for coordinating with the waste disposal facility the number of trucks, loading operations, and hours for loading.

D. Load trucks within the site boundary so that spills are contained within the area. If required by the Engineer, spread polyethylene sheeting over an area sufficient for truck loading in order to avoid contaminating the loading site. Spilled material shall be immediately picked up and deposited in the appropriate stockpile area.
E. The Contractor shall be fully and completely responsible for proper loading and adhering to load and weight limits of all trucks leaving the Project. All fines, taxes, penalties, or judgments resulting from overweight or improperly loaded vehicles shall be the full and complete responsibility of the Contractor.

F. All equipment shall be decontaminated prior to leaving the site.

G. The Contractor shall be responsible for ensuring that all material loaded for off-site disposal meets applicable transportation laws and regulations as well as the requirements of the receiving off-site waste disposal facility.

3.07 TEMPORARY STOCKPILE REMOVAL

A. After the completion of the excavation, stockpiling, and disposing of the excavated materials, the Contractor shall remove liners and top cover of any temporary stockpile areas and dispose at the designated off-site waste disposal facility.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE
A. Designing, furnishing, installing, operating, maintaining, and removing a dewatering system and all additional machinery, appliances and equipment to keep excavations free from water during construction. The Work includes monitoring water quantity and quality, treatment and disposing of pumped water; constructing, maintaining, observing, and removing the equipment and instrumentation when no longer needed.

1.02 RELATED SECTIONS
A. Section 01 33 00 – Submittal Procedures
B. Section 01 45 00 – Quality Control
C. Section 31 00 00 – Earthwork

1.03 REFERENCES
A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.
B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.
C. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS
A. Within 14 days of Notice to Proceed, submit a Dewatering Work Plan with drawings and complete design data showing methods and equipment for dewatering necessary to keep excavations and pipe trenches dry during construction. As a minimum, include the following:
   1. Drawings indicating the location and size of berms, dikes, ditches, sumps, and vacuum and discharge lines.
   2. Capacities of pumps, prime movers, and standby equipment.
   3. Design calculations providing adequacy of the system and selected equipment.
   4. Detailed description of the dewatering schedule, operation, maintenance, and removal procedures.
   5. Filter grain size.
   6. Polymer supplier and procedure for using polymer for the treatment of dewatering water. Actual polymer and dosage to be used for treatment may be submitted separately after testing of dewatering water by polymer supplier.
   7. List all permits required for dewatering and disposing of the dewatering discharge.
B. Submit copies of the special permits required for performing the work of this Section.
C. Submit records as specified herein.

1.05 QUALITY ASSURANCE
A. The Contractor shall obtain all necessary permits and authorizations for collecting and disposing of the dewatering discharge.
B. It shall be the sole responsibility of the Contractor to control the rate and effect of the dewatering operations in such a manner as to avoid all settlement, subsidence, and undermining.

C. The Dewatering system shall be designed by a professional civil engineer or certified hydrogeologist, registered in the State of Washington and specialized in hydrogeology or geotechnical engineering, with at least 3 years experience in the design, operation and maintenance of similar dewatering systems to design and direct operation of dewatering system.

1.06 SITE CONDITIONS
A. Subsurface investigations have been made at the project site. Groundwater conditions anticipated at the project site are described in the geotechnical report developed as part of this project entitled “Terminal 3 & 4 Backlands Redevelopment - Gate Complex”, dated September 22, 2017 and is provided in Appendix A.

B. Anticipate encountering groundwater at any location within the project site. The groundwater elevation varies depending upon proximity to the shoreline, soil conditions, tidal conditions, and weather.

C. The Contractor shall investigate and determine to its own satisfaction the extent and methods in which dewatering will be required to meet all required safety codes based on the nature of the existing soils and groundwater conditions.

PART 2 - PRODUCTS
2.01 MATERIALS
A. Furnish all materials, tools, equipment, facilities, and services as required for providing the necessary dewatering work and facilities. Make available equipment, machinery and piping, including standby power and pumps in good working order and of adequate capacity to continue dewatering operations due to equipment failure.

PART 3 - EXECUTION
3.01 GENERAL
A. Maintain excavations and pipe trenches free from water to facilitate fine grading, construction of structures, the proper laying and joining of pipe and appurtenances, and placement of backfill material.

B. Dewater trenches during pipe laying and installation of ductbanks. Do not allow trench water to flow through the pipe while construction work is in progress. Provide an adequate screen to prevent the entrance of objectionable material into the pipelines.

C. Provide and maintain at all times during construction, ample means and devices with which to promptly remove and properly dispose of all water entering trenches and excavations and other parts of the work, whether the water be surface water or underground water.

D. Do not lay pipelines or foundations in water, nor allow water to rise over them until the concrete has set at least 24 hours or until the foundations or pipelines have been adequately backfilled to prevent buoyancy.

E. The electrical service used for dewatering shall be supplied separately from all other Contractor electrical requirements and dedicated solely to the operation of the dewatering systems. Adequate backup generator(s) shall be on site at all times in case of failure of primary electrical service.
3.02 DEWATERING OF EXISTING UTILITIES
   A. Dewater existing storm drain piping designated for removal, including connected manholes, and catch basins.

3.03 DEWATERING PERMITS
   A. Obtain all necessary permits for disposing of the dewatering discharge.

3.04 DEWATERING WORK PLAN
   A. Allow at least ten (10) working days for the Engineer's review of any original or revised Dewatering Work Plan.
      1. Failure to accept all or part of any such plan shall not make the Engineer liable to the Contractor for any work delays.
      2. Approval of the Dewatering Work Plan submitted by the Contractor shall not in any way be considered to relieve the Contractor from full responsibility of errors therein.
      3. Any testing or pumping the Contractor may wish to perform in order to assure a properly functioning dewatering system shall be at the Contractor's own cost.
      4. Have and maintain on hand sufficient pumping equipment and machinery in good working condition for all ordinary emergencies, including power outage and flooding, and have available, at all times, competent workers for the continuous and successful operation of the dewatering systems.
      5. The dewatering system shall not be shut down between shifts, on holidays, or weekends, or during work stoppage without written permission from the Engineer.
      6. Control groundwater so that softening of the bottom of excavations, or formation of "quick" conditions or "boils" during excavation is prevented.
      7. Operate dewatering systems so as to prevent removal of the natural soils.
      8. Maintain water levels a minimum of 2 feet below the bottom of all excavations at all times and under all conditions.
      9. Keep excavations free of water during excavation, construction of structures, installation of pipelines, placement of gravel base, bedding and backfill, and placement and setting of concrete, prior to the acceptance of the work or any portion of the work.
     10. Control surface runoff so as to prevent entry or collection of water in excavations or in other isolated areas of the site.

3.05 EQUIPMENT
   A. Provide adequate pumping equipment to handle and dispose of the water without damage to adjacent property.
   B. Maintain on site sufficient equipment and materials to insure continuous and successful operation of the dewatering systems.
   C. If submersible/turbine pumps are used, provide one hundred percent standby electrical generating capacity.
   D. Manifold each diesel or electrically-powered centrifugal pump to a diesel pump of equal or greater performance capability. Standby pumps shall be fueled and operational at all times. All standby centrifugal pumps and generators shall be tested daily to insure their immediate availability.
E. Maintain on site a minimum of 60 feet of each size and type of header or discharge pipe used in the system. A sufficient number of valves, tees, elbows, connections, tools, recorder charts and parts or other system hardware shall be maintained on site to insure immediate repair or modification of any part of the system as necessary.

3.06 DISCHARGE WATER

A. Meet requirements of all regulating agencies for quantity, frequency, quality, clarity and location of dewatering water discharge.

B. Dispose of discharge water in such a manner as not to be a nuisance or menace to the public health.

C. Groundwater may be discharged to the existing sewer system provided that the volume does not exceed the Contractor obtained permit quantities, that all permits are secured prior to any discharge, and that all other permit conditions and regulatory agency conditions are met. Discharge to the sewer system is limited.

D. Contractor may discharge groundwater to surface waters provided that all permits are secured by the Contractor prior to any discharge, and that all permit conditions are met. Contractor shall obtain all permits and meet all local, state, and federal requirements for surface water discharge.

3.07 PROTECTION OF STRUCTURES, UTILITIES AND SURFACES

A. Control dewatering of excavations to prevent damage from settlement due to possible lowering of the adjacent groundwater table.

B. The cost for repairs or cleanup resulting from overflow caused by Contractor's dewatering practices shall be incurred by the Contractor and shall be considered incidental to the work.

C. Operate the dewatering system such that foundation soils, natural or engineered, will not be subject to fines removal upon pumping.

D. Repair any damage to work in place, contractors' equipment, and the excavation, including damage to the bottom due to heave and removal of material and pumping out of the excavated area, that may result from negligence, inadequate or improper installation, maintenance and operation of the dewatering system, and any mechanical or electrical failure of the dewatering system.

3.08 TREATMENT OF DISCHARGE WATER

A. If treatment of dewatering water prior to discharge is required, obtain the services of a polymer subcontractor/vendor to determine the appropriate polymer and dose for treating dewatering water. Polymer subcontractor/vendor shall visit site at the onset of the dewatering process to determine appropriate polymer and dose.

3.09 COMPLETION OF WORK

A. Subsequent to completion of all work in the excavated area, maintain the dewatering systems in operation. System maintenance shall include but not be limited to 24-hour supervision by personnel skilled in the operation, maintenance, and replacement of system components; standby and spare equipment of the same capacity and quantity in use; and any other work required to maintain the systems. Dewatering shall be a continuous operation and interruptions due to power outages or any other reason shall not be permitted.
B. When no longer required, remove all dewatering system elements. Contractor shall assume ownership and responsibility for the disposal of all dewatering pumps, pipes and other assorted system hardware.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE
A. The work covered by this Section includes the furnishing of all labor, materials, equipment and necessary services to construct asphalt pavements to the sections and at the locations as specified in this Section and as indicated on the Contract Drawings.

1.04 SUBMITTALS

A. A separate job mix formula for each proposed mix design shall be submitted in writing by the Contractor upon execution of the task order. Submittals shall represent all submittal elements specified herein and shall include as a minimum:

1. Mix designation/identification number and certificate of manufacturer's rated production rate.
2. Plant where mix will be produced.
3. Performance Graded Binder Certified Test Reports
   a. Source location and type of binder.
   b. Certificate of Compliance, including date and signature of the supplier, regarding conformance with AASHTO M 320, Table 1.
   c. Elastic recovery requirements in accordance with WSDOT Section 9-02.1(4)
   d. Temperature-viscosity relationship of the asphalt cement.
   e. Minimum mixing temperature (degrees F).
   f. Minimum compaction temperature (degrees F).

4. Coarse Aggregate Certified Test Reports:
   a. Source location and type of aggregate.
   b. Angularity.
c. Bulk specific gravity.

d. Flat and elongated particles.

e. Soundness.

f. LA Abrasion.

5. Fine Aggregate Certified Test Reports:
   a. Source location and type of aggregate.
   b. Bulk specific gravity.
   c. Percent natural sand (if used).
   d. Sand equivalent.
   e. Uncompacted void content.

6. Recycled Asphalt Pavement Test Reports (if used)

7. Anti-strip agent:
   a. Certification.
   b. Amount used.

8. Optimum Asphalt Determination (in accordance with ASTM D 5581 or ASTM D 6927, as appropriate).
   a. Compactive effort (75 or 112 blows applied to specimen, each face, as appropriate).
   b. Actual specific gravity and unit weight of each specimen.
   c. Percentage of asphalt in each specimen.
   d. Theoretical specific gravity of each specimen calculated.

10. Proportions and percentage of each aggregate stockpile.

11. Temperature of mix when discharged from the mixer.

12. Compaction temperature

13. Plot of the blended aggregate gradation and gradation control points on the Federal Highway Administration (FHWA) 0.45 power gradation curve.

14. Maximum specific gravity at the target binder content.

15. Gyratory compaction curve for Nmax.

16. Bulk specific gravity at Ndesign gyrations.

17. Percent theoretical maximum density at Ninitial, Ndesign, and Nmax gyrations.

18. Voids in mineral aggregate at Ndesign gyrations.

19. Voids filled with asphalt at Ndesign gyrations.

20. Dust to binder ratio
21. Flow value
22. Stability
23. Actual unit weight of laboratory compacted mixture.
24. Graphical plots of air voids, voids in the mineral aggregate, voids filled with asphalt, fines to effective binder content ratio, and unit weight verses asphalt content. Plots shall indicate values at –0.5 percent design asphalt content, design asphalt content, and +0.5 percent design asphalt content.
25. Tensile strength ratio (TSR), strength of conditioned samples, and worksheets.

B. The certification(s) shall show the appropriate AASHTO/ASTM test(s) for each material, test results, and a statement that the material meets the specification requirement.

C. If requested by the Engineer, submit samples for each type of aggregate to be used and from each source with proper identification as to source, type of aggregate and contract number. Take all samples in accordance with requirements of ASTM D75 and D242. Submit in clean, sturdy bags and in the following amounts for each sample when requested:

<table>
<thead>
<tr>
<th>MATERIAL</th>
<th>SAMPLE SIZE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coarse Aggregate</td>
<td>25 lbs.</td>
</tr>
<tr>
<td>Fine Aggregate</td>
<td>25 lbs.</td>
</tr>
<tr>
<td>Reclaimed Asphalt Pavement</td>
<td>25 lbs.</td>
</tr>
<tr>
<td>Mineral Filler</td>
<td>5 lbs.</td>
</tr>
</tbody>
</table>

D. The job mix formula for each mixture shall be in effect until modified in writing by the Engineer. Should a change in mix or sources of materials be made, a new job mix formula must be tested and resubmitted for approved by the Engineer before the new mix is used.

E. Working Drawings: For each paving area, provide working drawings to show the following information:
   1. Direction of paving.
   2. Lane widths.
   3. Thickness of each lift.

F. Submit smoothness measurements and surface grade survey results to the Engineer prior to application for payment.
G. Equipment List: The Contractor shall submit a list of equipment to be used for placing asphalt concrete to the Engineer prior to utilization on the job.

H. Moisture content of asphalt

1.05 CONTRACTOR QUALITY CONTROL

A. The Contractor shall be responsible for developing the asphalt mix designs specified herein. The mix designs shall be developed and/or certified by a laboratory accredited by AASHTO under the AASHTO re:source program. Mixtures on WSDOT’s QPL are considered to be certified.

B. Quality Control Testing: The Contractor shall conduct any and all quality control (QC) testing that he deems necessary to properly control the quality, consistency, and uniformity of the asphalt concrete mix being produced. No minimum number of quality control tests is required for this Contract.

C. For all Quality Control testing performed by Contractor, information and data determined through that testing shall be made available for inspection by Engineer upon request. In no case, however, will Contractor’s Quality Control test data be used by Engineer for acceptance or payment purposes.

D. If the Contractor chooses to conduct quality control tests, the information and data determined through that testing shall be made available for inspection by the Engineer. In no case, however, shall the Contractor’s quality control test data be used by the Engineer for acceptance or payment purposes.

E. Surface Grades: Grades shall conform to the tolerance requirements specified herein, except where closer tolerance is required for the proper functioning of appurtenant structures and drainage as determined by the Engineer.

1.06 QUALITY ASSURANCE

A. The Engineer will provide inspection services. Sampling and testing for compliance shall be in accordance with the applicable reference standards using certified technicians and accredited independent testing laboratories.

B. Sampling and testing for compliance with the Contract provisions shall be in accordance with Section 01 33 00 - Submittal Procedures and Section 01 45 00 - Quality Control.

C. The Contractor may obtain copies of results of tests performed by the Engineer, at no cost. Tests conducted for the sole benefit of the Contractor, shall be at the Contractor's expense.

D. Unless otherwise referenced or modified herein, quality control and quality standards for this section shall be as specified in the WSDOT Standard Specifications.

1.07 JOB CONDITIONS

A. Environmental Requirements:
   1. Do not place asphalt beginning October 1st through March 31st of the following year, without written concurrence from the Engineer.

Project No. 201054.01 and 201055.01
Contract No. 070819
EST Stormwater Improvements and NIM Stormwater Treatment
2. In case of sudden rain, the Engineer may permit placing of mixture, then in transport from the plant, provided that the surface upon which the mix is being placed is dry. In addition, the laydown temperatures must conform to the above requirements. Such permission, however, shall not be interpreted as a waiver of any of the quality requirements.

B. New and existing manholes, catch basins, and utility vault covers shall be adjusted to conform to the new pavement grades. All lids, vaults, frames, grates, and other appurtenances shall be set to final grade and accepted by the Engineer paving. Paving shall be finished 1/4-inch to 1/2-inch higher than adjacent structures, unless otherwise shown or specified.

C. Existing Underground Utilities: The Contractor shall locate existing underground utilities in the area of the work. Those utilities which are to remain shall be adequately protected from damage.

D. All permanent utilities shall be installed prior to final paving. All utility trenches shall be patched with asphalt pavement as shown on the Contract Drawings.

E. Dust Control: The Contractor shall be responsible for dust control at the site. As a minimum, a water truck and vacuum truck shall be used on site for dust control when required by the Engineer.

PART 2 - PRODUCTS

2.01 PERFORMANCE GRADED ASPHALT BINDER (PGAB)
   A. Asphalt shall conform to the requirements of AASHTO M 320 and the elastic recovery requirements of WSDOT Standard Specification Section 9-02.1(4) for the Performance Grade specified herein.

2.02 AGGREGATE
   A. Coarse Aggregate – Coarse aggregate shall conform to WSDOT Standard Specification Section 9-03.8 and AASHTO M 323, as modified below:

<table>
<thead>
<tr>
<th>Test</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flat and Elongated Particles (ASTM D 4791, using a ratio of 5:1, maximum to minimum dimension)</td>
<td>8%, maximum</td>
</tr>
<tr>
<td>Coarse Aggregate Angularity (AASHTO T 335)</td>
<td>95% with 2 or more fractured faces 100% with 1 or more fractured faces</td>
</tr>
<tr>
<td>LA Abrasion Wear (AASHTO T 96, 500 revolutions)</td>
<td>40%, maximum</td>
</tr>
</tbody>
</table>
B. Fine Aggregate - Fine aggregate shall consist of clean, sound, durable, angular shaped particles produced by crushing stone or gravel that meets the requirements for wear and soundness specified for coarse aggregate. Natural (non-manufactured) siliceous sand may be used to obtain the gradation of the aggregate blend or to improve the workability of the mix. The amount of sand to be added will be adjusted to produce mixtures conforming to requirements of this Specification. The aggregate particles shall be free from coatings of clay, silt, or other objectionable matter and shall contain no clay balls. Fine aggregate shall conform to WSDOT Standard Specification Section 9-03.8 and AASHTO M 323, as modified below:

<table>
<thead>
<tr>
<th>Test</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sand Equivalent (AASHTO T 176)</td>
<td>45%, minimum</td>
</tr>
<tr>
<td>Uncompacted Void Content (AASHTO T 304, Method A)</td>
<td>45%, minimum</td>
</tr>
<tr>
<td>Deleterious Materials (AASHTO T 112)</td>
<td>2%, maximum</td>
</tr>
</tbody>
</table>

C. Mineral filler, when used, shall conform to the requirements of AASHTO M 17.

D. Crushed slag aggregates shall not be used.

E. Recycled Asphalt Pavement (RAP)
   1. RAP, if used, shall conform to the requirements of WSDOT Standard Specification Section 9-03.8(3)B, 9-03.21(1), and 9-03.21(1)A, as modified herein.
   2. The maximum proportion of RAP permitted within each mix shall not exceed 20 percent measured by total weight of HMA.
   3. RAP shall have 100 percent passing the 2-inch sieve, 95 percent passing the 1 inch sieve, and shall be a mixture of only coarse aggregate, fine aggregate, and asphalt cement, free of solvents and other contaminating materials.
   4. When RAP is used in a mixture, the RAP aggregate shall be extracted from the RAP using a solvent extraction (AASHTO T164) or ignition oven (AASHTO T308). The RAP aggregate shall be included in determinations of gradation, coarse aggregate angularity, fine aggregate angularity, and flat-and-elongated requirements. The sand equivalent requirements shall be waived for the RAP aggregates but shall apply to the remainder of the aggregate blend.
   5. Documentation of RAP stockpile quality and traceability shall be submitted to the Engineer for approval prior to use.
F. Aggregate Gradation

1. Each gradation contains maximum and minimum control points. Job mix formula gradations must fall within control points for the specified nominal aggregate size. The combined aggregate shall conform to the gradation requirements shown below when tested in accordance with AASHTO T11 and T27. Design gradation requirements are as follows:

<table>
<thead>
<tr>
<th>Sieve Size</th>
<th>1/2-inch NMAS (Percent Passing)</th>
<th>3/4-inch NMAS (Percent Passing)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-1/2&quot;</td>
<td>-</td>
<td></td>
</tr>
<tr>
<td>1&quot;</td>
<td>-</td>
<td>100</td>
</tr>
<tr>
<td>3/4&quot;</td>
<td>100</td>
<td>90-100</td>
</tr>
<tr>
<td>1/2&quot;</td>
<td>90-100</td>
<td>60-90</td>
</tr>
<tr>
<td>3/8&quot;</td>
<td>75-90</td>
<td>50-82</td>
</tr>
<tr>
<td>No. 4</td>
<td>46-66</td>
<td>35-65</td>

<tr>
<td>No. 200</td>
<td>3.0-7.0</td>
<td>3.0-7.0</td>
</tr>
</tbody>
</table>

2. Aggregates shall be provided in sufficient sizes to produce a uniform mixture. The Contractor shall indicate on the proposed job-mix formula the separate size designations of aggregate to be used.

3. It is recommended that the Bailey Method of gradation evaluation be used to evaluate the packing of aggregate particles and constructability of the blended aggregate mix. If segregation or non-uniformity is evident in the finished pavement, the Engineer reserves the right to require the Contractor to discontinue the use of crusher run or aggregate blends and to furnish separate sizes of open graded aggregate material.

4. Blended Aggregates:
   a. Fine aggregates and coarse aggregates when blended shall not contain more than 2 percent by mass, clay and other friable particles as determined by AASHTO T112.
   b. Each gradation contains maximum and minimum control points. Job mix formula gradations must fall within control points for the specified mix. The combined aggregate shall conform to the gradation requirements shown here when tested in accordance with AASHTO C117 and C136.

2.03 HOT MIX ASPHALT (HMA) MIX DESIGN

A. Mix design shall be prepared by the Contractor in accordance with WSDOT SOP 732 as modified herein.

B. Asphalt Binder: PG 70-22 and PG 64-22

C. Aggregate Gradation: 1/2-inch, 3/4 - inch
D. Gyration levels for mix preparation shall conform to the following:

<table>
<thead>
<tr>
<th>Mix Designation</th>
<th>N_{i}</th>
<th>N_{d}</th>
<th>N_{m}</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2 inch</td>
<td>8</td>
<td>100</td>
<td>160</td>
</tr>
<tr>
<td>3/4 inch</td>
<td>7</td>
<td>75</td>
<td>115</td>
</tr>
</tbody>
</table>

E. The target air voids (V_{a}) of the mix design at the design number of gyrations shall be as follows:

<table>
<thead>
<tr>
<th>Mix Designation</th>
<th>Air Voids (Percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2 inch</td>
<td>4.0</td>
</tr>
<tr>
<td>3/4 inch</td>
<td>4.0</td>
</tr>
</tbody>
</table>

F. The voids filled with asphalt (V_{FA}) at the target air void level shall be as follows:

<table>
<thead>
<tr>
<th>Mix Designation</th>
<th>Voids Filled with Asphalt (Percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2 inch</td>
<td>65 – 75</td>
</tr>
<tr>
<td>3/4 inch</td>
<td>65 – 75</td>
</tr>
</tbody>
</table>

G. The voids in mineral aggregate (V_{MA}) of the HMA design shall be as follows:

<table>
<thead>
<tr>
<th>Mix Designation</th>
<th>Voids in Mineral Aggregate (Percent) Minimum^{1}</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2 inch</td>
<td>14.0</td>
</tr>
<tr>
<td>3/4 inch</td>
<td>13.0</td>
</tr>
</tbody>
</table>

^{1}Note: V_{MA} is not allowed to drop below minimum in production.

H. The HMA design when compacted in accordance with AASHTO T 312, shall meet the density specified below at the initial, design, and maximum compaction levels.

<table>
<thead>
<tr>
<th>Compaction Level (Number of Gyrations)</th>
<th>Required Density (% of Theoretical Maximum Specific Gravity)</th>
</tr>
</thead>
<tbody>
<tr>
<td>N_{i}</td>
<td>G_{mm} =&lt; 89</td>
</tr>
<tr>
<td>N_{d}</td>
<td>G_{mm} = 96</td>
</tr>
<tr>
<td>N_{m}</td>
<td>G_{mm} =&lt; 98</td>
</tr>
</tbody>
</table>

I. The dust to binder ratio (by weight ratio between the minus 200 sieve material and effective asphalt content) of the blended mix shall be between 0.6 and 1.4 for 1/2-inch and 3/4-inch mixes.

J. Compacted mix design shall have a tensile strength ratio (TSR) greater than or equal to 85 percent when tested in accordance with WSDOT Test Method T718, including the optional freeze-thaw cycle. In addition, the mixture shall have a minimum wet tensile strength of 80 pounds per square inch (psi) and a maximum dry tensile strength of 175 psi. In the event the mix design does not meet the tensile strength requirements the Contractor shall increase the approved anti-stripping agent dosage or take other corrective action to satisfy the specification.

### 2.04 HEAT-STABLE ANTI-STRIPPING ADDITIVE

A. Mix designs shall include a minimum of 0.1 percent by weight of binder, anti-stripping additive conforming to the requirements of WSDOT Standard Specification Section 9-02.4.
2.05 TACK COAT
   A. Unless otherwise approved by the Engineer, the tack coat shall be CSS-1, CSS-1h, or STE-1 emulsified asphalt conforming to WSDOT Standard Specification Section 9-02.1(6). The CSS-1 and CSS-1h emulsified asphalt may be diluted with water at a rate not to exceed one part water to one part emulsified asphalt. The tack coat shall not exceed the maximum temperature recommended by the emulsified asphalt manufacturer.

2.06 JOINT AND CRACK SEALANT
   A. Sealant material shall conform to the requirements of WSDOT Standard Specification Section 9-04.2(1)A2.

PART 3 - EXECUTION

3.01 CONSTRUCTION METHODS
   A. Asphalt Mixing Plant – Asphalt shall be produced at a plant approved by the WSDOT. Plants shall conform to WSDOT Standard Specifications Section 5-04.3(3)A.

   B. Hauling Equipment:
      1. Hauling equipment shall conform to WSDOT Standard Specifications Section 5-04.3(3)B, as modified herein.
      2. Trucks shall be equipped with tarps, in good condition without holes, which can be tied down over the sides and ends of the truck beds during periods of inclement weather to prevent rain from entering the truck bed and coming in contact with the asphalt concrete mix.
      3. Trucks shall be loaded using a multiple-drop method (front then back the middle) to minimize truck to truck segregation.

   C. Paving Equipment – Asphalt pavers shall conform to WSDOT Standard Specifications Section 5-04.3(3)C.

   D. Compaction Equipment – Rollers shall conform to WSDOT Standard Specifications Section 5-04.3(3)E.

   E. Preparation of the Asphalt Binder Material (asphalt cement):
      1. The binder shall be stored within the temperature range specified by the supplier of the binder for the grade of asphalt cement being used. Different grades of asphalt binder shall be stored separately and not mixed together at any time.
      2. The binder shall be heated in a manner that will avoid local overheating and provide a continuous supply of the bituminous material to the mixer at a uniform temperature.
      3. The temperature of the binder delivered to the mixer shall be sufficient to provide a suitable viscosity for adequate coating of the aggregate particles, but shall not exceed 350 degrees F unless otherwise required by the asphalt binder manufacturer.
F. Preparation of the Aggregates:
   1. The aggregate for the mixture shall be heated and dried prior to introduction into the mixer. Aggregate shall be dry with no moisture content prior to introduction into the mixer. The maximum temperature and rate of heating shall be such that no damage occurs to the aggregates.
   2. The aggregate temperature shall not be lower than is required to obtain complete coating and uniform distribution of the aggregate particles and to provide a mixture of satisfactory workability.

G. Preparation of Bituminous Mixture:
   1. Asphalt plant shall not exceed production rate certified by manufacturer.
   2. Mixing shall conform to WSDOT Standard Specifications Section 5-04.3(6), as modified herein.
   3. The aggregates and the bituminous material shall be properly proportioned and introduced into the mixer in the amount specified by the job mix formula.
   4. Job mix formula production tolerances shall conform to WSDOT Standard Specifications Section 9-03.8(7), except the tolerance limits for aggregate shall not exceed the limits of the control points specified herein.
   5. The moisture content of all bituminous mix upon discharge shall not exceed one (1) percent. Asphalt sampling shall be performed in accordance with AASHTO T 168 and moisture content testing shall be performed in accordance with AASHTO T 329. Results of the moisture content testing shall be submitted to the Engineer.

H. Preparation of the Underlying Surface:
   1. Preparation shall conform to WSDOT Standard Specifications Sections 5-04.3(4), and 5-04.3(4)C as modified herein.
   2. Asphalt materials shall not be placed until the underlying course has been tested and accepted by the Engineer.
   3. The underlying surface shall be free of water, foreign material, and dust when the hot mix asphalt mixture is applied. Immediately before placing asphalt materials, clean all underlying surfaces and previous courses of all loose and foreign material by sweeping with hand brooms, power sweepers or blowers as directed by the Engineer.
   4. Tack Coat:
      a. Tack coat shall be applied in accordance with WSDOT Standard Specifications Section 5-04.3(4), as modified herein. The Engineer shall verify that the tack coat has been properly placed prior to constructing subsequent pavement lifts. Refer to the applicable sections in Chapter 5 of the WSDOT Construction Manual for guidance on tack coat application and inspection.
      b. Apply tack coat only when the underlying surface is free of water, foreign material, dust, and the ambient temperature meets the requirements for the pavement course being placed.
c. Residual asphalt coating shall be 0.03 to 0.05 gallons per square yard on newly placed asphalt surfaces.

d. Residual asphalt coating shall be 0.06 to 0.08 gallons per square yard on existing or milled asphalt surfaces.

e. Tack coat shall be applied to all vertical surfaces of existing pavement, curbs, gutters, utility structures, concrete edge of the wharf, and construction joints in the asphalt against which additional material is to be placed.

f. Exposed surfaces of utility vault lids, frames, grates, valve boxes, inlets and other appurtenances within the area to be paved shall be protected from tack coating.

5. Manholes, catch basins, vaults, valve boxes, inlets, frames, grates, lids, and other appurtenances within the area to be paved shall be adjusted to final grade as shown on the Contract Drawings, shall be in place during paving operations, and shall not be paved over as part of the paving operation. Permanent curbs, gutters, and other supports shall be constructed and backfilled prior to placing asphalt. All contact surfaces shall be coated with tack coat.

I. Transporting, Placing, and Finishing:

1. The asphalt concrete mixture shall be transported from the mixing plant to the site in vehicles conforming to the requirements specified herein.

2. Hauling over freshly placed material shall be not permitted until the material has been compacted, as specified, and allowed to cool to atmospheric temperature.

3. Placing and finishing of the asphalt mixture shall be in accordance with WSDOT Standard Specifications Section 5-04.3(7), as modified herein.

4. The nominal compacted depth of any layer of any course shall not exceed five (5) times the nominal maximum aggregate size and shall not be less than three (3) times the nominal maximum aggregate size of the asphalt mix.

5. The hot mix asphalt mixture shall not be placed during unsuitable weather or when the surface temperature of the underlying course is less than that specified below. Asphalt shall not be placed unless the atmospheric temperature is at least 50 degrees F and rising. The temperature requirements may be waived by the Engineer, if requested; however, all other requirements including compaction shall be met.

<table>
<thead>
<tr>
<th>Lift Thickness, T (inches)</th>
<th>Minimum Base Temperature (degrees F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>T &gt; 3</td>
<td>40</td>
</tr>
<tr>
<td>2 &lt; T &lt; 3</td>
<td>45</td>
</tr>
<tr>
<td>T &lt; 2</td>
<td>55</td>
</tr>
</tbody>
</table>

6. The initial placement of the asphalt concrete mixture shall occur at a temperature suitable for obtaining density, surface smoothness, and other specified requirements but not less than 250 degrees F, unless approved by the Engineer.
7. Upon arrival, the mixture shall be placed to the full width of the paving lane. It shall be struck off in a uniform layer of such depth that, when the mix is properly compacted, shall have the required thickness and conform to the grade and contour indicated. The speed of the paver shall be regulated to eliminate pulling and tearing of the bituminous mat. Unless otherwise permitted, placement of the mixtures shall begin along the centerline of a crowned section or on the high side or areas with a one-way slope. The mixture shall be placed in consecutive adjacent strips having a minimum width of 10-feet except where edge lanes require less width to complete the area.

8. On areas where irregularities or unavoidable obstacles make the use of mechanical spreading and finishing equipment impractical, the mixture may be spread and raked by hand tools.

3.02 COMPACTION OF MIXTURE

A. After placing, the mixture shall be thoroughly and uniformly compacted by rolling. Surface shall be compacted as soon as possible when the mixture has attained sufficient stability so that the rolling does not cause undue displacement, cracking or shoving. Sequence of rolling operations and the type of rollers shall be at the discretion of the Contractor.

B. Compaction shall be completed before the mixture cools below 175 degrees F, unless otherwise approved by the Engineer. Temperature shall be determined using an infrared thermometer by the Engineer.

C. The speed of the roller shall, at all times, be sufficiently slow to avoid displacement of the hot mixture and be effective in compaction. Any displacement occurring as a result of reversing the direction of the roller, or from any other cause, shall be corrected at once.

D. In areas not accessible to the roller, the mixture shall be thoroughly compacted with mechanical tampers.

E. Any mixture that becomes loose and broken, mixed with dirt, contains check-cracking, or in any way defective shall be removed and replaced with fresh hot mixture and immediately compacted to conform to the surrounding area. This work shall be done at Contractor's expense. Skin patching will not be allowed.

F. Compaction of the asphalt mixture shall be in accordance with WSDOT Standard Specifications Section 5-04.3(10), as modified herein.

1. For density determination, each day’s production will be treated as a lot. A minimum of ten sublots will be tested each day; 15 if production tonnage is expected to exceed 600 tons for that day. In no case shall the sublot size for density determination exceed 40 tons. Random test locations shall be determined according to WSDOT Test Method T 716.

2. In-place density shall be a minimum of 93% of the reference theoretical maximum density as determined by WSDOT FOP for AASHTO T209. A minimum of two cores per day/lot will be taken by the Engineer or their representative to confirm gauge calibration. At the discretion of the Engineer, cores can be used as the sole means of density acceptance.
3. If nuclear density testing is the basis for acceptance, then the nuclear density testing equipment shall be calibrated in accordance with WSDOT SOP 730. Calibration cores may be omitted at the Engineer's discretion.

4. Determine reference theoretical maximum density as the moving average of the most recent five determinations for the lot of asphalt concrete being placed according to WSDOT Materials Manual Standard Operating Procedure 729.

5. Engineer may evaluate cyclic density as described in WSDOT Standard Specifications Section 5-04.3(10)B to assess segregation.

G. Joints:

1. The longitudinal joint in one course shall offset the longitudinal joint in the course immediately below by at least 6-inches; however, the joint in the surface course shall be at the centerline of the pavement if that pavement is to be used by normal car or truck traffic.

2. Longitudinal joint density shall be assessed once per sublot in accordance with WSDOT SOP 735. Low density is defined as less than 91 percent of reference maximum density. When placing a single paver width patch, consecutive density tests will be taken on alternating sides of the patch.

3. Transverse joints in one course shall be offset by at least 10-feet longitudinally from transverse joints in the previous course. Transverse joints in adjacent lanes shall be offset a minimum of 10-feet.

4. Formation of all joints shall be made to ensure a continuous bond between courses and obtain required density. Joints shall have same texture as other sections of course and meet requirements for smoothness and grade.

5. Roller shall not pass over unprotected transverse end of freshly laid mixture except when necessary to form a temporary stop. After a temporary stop, and prior to continuation of paving, the tapered edge shall be cut back to its full depth and width on a straight line, to expose a vertical face, before placing the adjacent lane.

6. Longitudinal joints which are irregular, damaged, uncompacted, or otherwise defective shall be cut back to expose a clean, vertical, sound, surface for the full depth of the course. Apply tack coat on all newly exposed contact surfaces before placing any fresh mixture against the joint.

3.03 JOINT SEALANT

A. Apply joint sealant to the edges of new paving joints, catch basins, manholes, at the meet lines to concrete structures and as directed by the Engineer.

3.04 SURFACE SMOOTHNESS

A. The completed surface of the wearing course shall conform to the smoothness tolerance requirements of WSDOT Standard Specifications Section 5-04.3(13).
3.05 FIELD QUALITY CONTROL

A. Contractor shall backfill core holes with quickset concrete with a minimum compressive strength of 3,000 psi.

B. Surface Grades: Grades shall conform to tolerance requirements specified herein, except where a closer tolerance is required for the proper functioning of appurtenant structures and drainage as determined by Engineer.

C. After the curing, Contractor shall perform a flood test to check if there are any local depressions on the pavement. All asphalt pavement work where water ponds and does not run off within a reasonable amount of time, as determined by the Engineer, shall be fixed to provide proper drainage. Test shall be performed in the Engineer’s presence.

D. Quality Assurance Testing By Engineer:
   1. Contractor shall arrange for Engineer to have access to the mixing plant for verification of weights or proportions, character of materials used and determination of temperatures used in the preparation of asphalt concrete mix.
   2. Contractor shall provide reasonably safe and convenient access, acceptable to Engineer, for inspection and sampling of the AC, and shall cooperate in the inspection and sampling process when requested to do so.

3.06 ADJUSTING AND CLEANING

A. The Contractor shall adjust manholes, utility vaults and boxes, and valve boxes to final grades.

B. At the conclusion of the work and before final payment is made, Contractor shall remove all debris of every kind from the premises and leave the area broom clean.

3.07 PROTECTION

A. After final rolling, the Contractor shall not permit vehicular traffic on pavement for a minimum of 24 hours until it has cooled and hardened.

B. The Contractor shall erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The work includes application of pavement markings in areas of trench paving as indicated on the project drawings and specified herein.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures

1.04 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.
B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
C. Certificates: Submit for each batch of paint stating compliance with specified requirements.
D. Submit manufacturer's certification of the actual volatile organic compound (VOC) content for all pavement paints proposed for use on this project. Submit certification of the actual VOC content for coatings manufactured after 1 September 1987. For coatings manufactured before 1 September 1987, submit VOC content and date of manufacture. VOC content shall be measured in grams per liter by weight of coating as applied excluding water and color added to the tint base.
E. Submit verification to local air pollution authorities and the State Department of Ecology that paint products furnished meet applicable regulations as to allowable VOC content for the time and place of application and use intended.
1.05 QUALITY ASSURANCE
   A. Unless otherwise specified, the Engineer will provide testing and inspection services. The Contractor may obtain test results from the Engineer at no cost. Tests conducted for the sole benefit of the Contractor, or before a product is approved, shall be at the Contractor's expense.

PART 2 - PRODUCTS
2.01 MATERIALS
   A. Paint: Materials shall conform to WSDOT Standard Specification Section 9-34.2 for low VOC paint.
   B. Temporary Marking Tape: Preformed, reflective, pressure sensitive adhesive tape in color(s) required; Contractor is responsible for selection of material of sufficient durability as to perform satisfactorily during period for which its use is required.

PART 3 - EXECUTION
3.01 EXAMINATION
   A. Do not begin installation until pavement surfaces have been properly prepared.

3.02 DELIVERY, STORAGE, AND HANDLING
   A. Deliver paint in containers of at least 5 gallons accompanied by batch certificate.
   B. Store products in manufacturer's unopened packaging until ready for installation.
   C. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

3.03 PREPARATION
   A. Do not install products under environmental conditions outside manufacturer's absolute limits.
   B. Allow new pavement surfaces to cure for a period of not less than 14 days before application of marking materials.
   C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
   D. Obliteration of existing markings using paint is not acceptable in lieu of removal.
   E. Clean surfaces thoroughly prior to installation.
      1. Remove dust, dirt, and other granular surface deposits by sweeping, blowing with compressed air, rinsing with water, or a combination of these methods.
      2. Completely remove rubber deposits, existing paint markings, and other coatings adhering to the pavement, by scraping, wire brushing, sandblasting, mechanical abrasion, or approved chemicals.
      3. All surfaces shall be dry prior to striping.
   F. Where oil or grease are present, scrub affected areas with several applications of trisodium phosphate solution or other approved detergent or degreaser, and rinse thoroughly after each application; after cleaning, seal oil-soaked areas with cut shellac to prevent bleeding through the new paint.
G. Establish survey control points to determine locations and dimensions of markings; provide templates to control paint application by type and color at necessary intervals.

H. Temporary Pavement Markings: When required or directed by Engineer, apply temporary markings of the color(s), width(s) and length(s) as indicated or directed.
   1. After temporary marking has served its purpose, remove temporary marking by carefully controlled sandblasting, approved grinding equipment, or other approved method so that surface to which the marking was applied will not be damaged.
   2. At Contractor's option, temporary marking tape may be used in lieu of temporary painted marking; remove unsatisfactory tape and replace with painted markings at no additional cost to the Owner.

3.04 INSTALLATION
A. Begin pavement marking as soon as practicable after surface has been cleaned and dried.
B. At the time of application all pavement surfaces shall be free of moisture, oil, dirt, dust, grease and similar foreign materials.
C. Do not apply paint if temperature of surface to be painted or the atmosphere exceeds the temperature limits recommended by the manufacturer.
D. Apply in accordance with manufacturer's instructions using an experienced technician that is thoroughly familiar with equipment, materials, and marking layouts.
E. Comply with FHWA MUTCD manual (http://mutcd.fhwa.dot.gov) for details not shown.
F. Apply markings in locations determined by measurement from survey control points; preserve control points until after markings have been accepted.
G. Apply uniformly painted markings of color(s), lengths, and widths as indicated on the drawings; true, sharp edges and ends; and in conformance with WSDOT Standard Specification Section 8-22.3(3) for marking application for paint.
   1. Length Tolerance: Plus or minus 3 inches.
   2. Width Tolerance: Plus or minus 1/4 inch.
   3. Letter/Number Height Tolerance: Plus or minus 1 inch.
H. Use suitable mechanical equipment that provides constant agitation of paint and travels at controlled speeds.
   1. Conduct operations in such a manner that necessary traffic can move without hindrance.
   2. Place warning signs as necessary for alerting traffic.
   3. If paint does not dry within expected time, discontinue paint operations until cause of slow drying is determined and corrected.
   4. Use hand application by pneumatic spray for application of paint in areas where a mobile paint applicator cannot be used.
I. Symbols: Use a suitable template that will provide a pavement marking with true, sharp edges and ends, of the design and size indicated.
3.05 DRYING, PROTECTION, AND REPLACEMENT

A. Protect newly painted markings so that paint is not picked up by tires, smeared, or tracked.

B. Provide barricades, warning signs, and flags as necessary to prevent traffic crossing newly painted markings.

C. Allow paint to dry at least the minimum time specified by the applicable paint standard and not less than that recommended by the manufacturer.

D. Remove and replace markings that are applied at less than minimum material rates; deviate from true alignment; exceed length and width tolerances; or show light spots, smears, or other deficiencies or irregularities. Removal and replacement of markings shall be performed at no additional cost to the Owner.

E. Remove markings in manner to avoid damage to the surface to which the marking was applied, using carefully controlled sand blasting, approved grinding equipment, or other approved method.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The location and extent of the Storm Drainage Utilities work is indicated on the Drawings. The work includes the requirements for furnishing and installation of the following:
   1. Storm Drainage Pipe
   2. Manholes
   3. Catch basins
   4. Vaults

1.02 RELATED SECTIONS

A. Section 02 41 00 – Site Demolition
B. Section 03 30 00 – Cast-in-Place Concrete
C. Section 03 40 00 – Precast Concrete
D. Section 31 00 00 – Earthwork
E. Section 31 23 19 – Dewatering

1.03 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.
B. Unless otherwise indicated, the most recent edition of the publication, including any revisions, shall be used.
   1. AASHTO M198 - Standard Specification for Joints for Concrete Pipe, Manholes, and Precast Box Sections Using Preformed Flexible Joint Sealants
C. American Society for Testing and Materials (ASTM)
D. Washington State Department of Transportation (WSDOT)

1.04 SUBMITTALS

A. Submit the following in accordance with Section 01 33 00 – Submittal Procedures for the following products:
   1. Pipe, fittings, and accessories:
      a) Submit manufacturer's catalog cuts, shop drawings and detailed installation drawings to demonstrate that specified items conform to the specifications.
   2. Manholes, Catch Basins, and Vaults
      a) Comply with the submittal requirements of Section 03 40 00 – Precast Concrete.
      b) The Contractor shall design and provide manholes, catch basins, and vaults including frames, and covers to accommodate the loads indicated on the plans.
c) Submit design calculations, shop drawings, and product information for each loading condition and all items related to the various structure fabrications and installations. Calculations and construction shall include compensation to prevent buoyancy assuming groundwater at 6 feet below ground.

d) Shop Drawings and calculations shall be stamped by a professional engineer registered in the State of Washington.

e) Manufacturer’s literature on prefabricated manholes, catch basins, vaults, steps, covers, grates, and frames.

1.05 QUALITY ASSURANCE

A. Unless otherwise specified, the Engineer will provide testing and inspection services. The Contractor may obtain test results from Engineer at no cost. Tests conducted for the sole benefit of the Contractor, or before a product is approved, shall be at the Contractor's expense.

B. Qualification of Workmen: Employ at least one person who shall be present at all times during execution of this portion of the work, shall have all portions of the Drawings and Specifications applicable to that portion of the contract, shall be thoroughly familiar with the type of materials being installed and the best methods for their installation, and shall direct all work performed under this Section.

PART 2 - PRODUCTS

2.01 PIPE AND FITTINGS

A. High-Density Polyethylene (HDPE) Pipe
   1. High Density Polyethylene (HDPE) Pipe shall conform to the requirements of WSDOT Standard Specification Section 9-05. 20. Pipe shall be Type S.
   2. Joints shall be watertight and conform to ASTM D3212

2.02 MANHOLES, CATCH BASINS, AND VAULTS

A. Manholes, catch basins, and vaults shall be of precast concrete with ductile iron castings. Materials shall be in accordance with the applicable references within WSDOT Standard Specifications, Section 7-05.

B. The Contractor shall design and provide manholes, catch basins, and vaults including frames, and covers to accommodate the loads indicated on the plans.

C. Manhole and catch basin, rings and covers shall be non-locking, heavy duty, ductile-iron castings of the size and style indicated on the drawings. Solid covers shall be embossed with 3-inch high lettering that reads "STORM", centered on the cover, or as indicated on the plans.

D. Provide watertight rubber gaskets at matching segments of precast units.

E. Manhole steps shall be copolymer polypropylene plastic manufactured by Lane International or approved equal.

F. Openings surrounding pipes entering manhole, catch basin or vault structures shall be completely filled with either a non-shrink grout and shall be made flush with the remaining manhole concrete surface to ensure watertightness, or a Kor-n-Seal boot.

2.03 PIPE SUPPORT

A. Pipe supports shall be adjustable saddle type with galvanized finish.
2.04 NON-SHRINK GROUT
   A. Refer to Section 03 30 00 – Cast-in-Place Concrete.

PART 3 - EXECUTION

3.01 GENERAL
   A. It shall be the Contractor's responsibility to verify the actual locations (horizontal and vertical) of all utilities prior to beginning trench excavation. If utilities are to remain in place, provide protection from damage during construction operations.

3.02 TRENCHING, BEDDING, AND BACKFILL
   A. All earthwork related to stormwater piping shall conform to the requirements of Section 31 00 00 – Earthwork and Section 31 23 19 – Dewatering and the details and notes on the Drawings. Provide shoring as necessary to support existing items that are to remain in place.
   B. In the event that water is encountered or accumulates in the trench, it shall be removed during the pipe-laying operation and be maintained in a water-free condition until the ends of the pipe are sealed and provisions are made to prevent floating of the pipe. At no time allow trench water to enter the pipe.

3.03 COORDINATION WITH OTHERS
   A. Prior to starting work, coordinate shut downs, demolition, potholing and other activities with the Engineer.

3.04 INSTALLATION OF UNDERGROUND PIPE
   A. Furnish all necessary machinery for the work and pump, bail, or otherwise remove water which accumulates in the trench. Perform all work necessary to keep the trench clear of water while the foundation and masonry are being constructed or the pipe is being laid. Construction requirements shall be in accordance with WSDOT Standard Specifications Section 7-04.3 and 7-08.3, and the requirements shown below.
      1. Survey Line and Grade: Setting alignment and grade of sloped gravity drainage piping shall be performed by Contractor using laser beam and methods described in WSDOT Standard Specifications Section 7-08.3(2)A.
      2. Placing: Place the pipe on appropriate bedding graded to conform with the grades and alignment indicated on the Drawings and prepared as Specified. Exercise care that the pipe has a full, solid bearing along its entire length. Make small depressions for pipe bells when utilized. Make minor adjustments to line and grade by scraping away, or filling in bedding material. Do not support pipes on blocks or mounds of any nature.
      3. Jointing: Take care to properly align the pipe and clean the bell and spigot or tongue of the pipe. Gaskets must be straight, properly lubricated and without twist. Partially support the pipe by hand, sling, or crane, as required, to minimize lateral pressure on the gasket and to maintain concentricity until the pipe has been forced into final longitudinal position in accordance with the manufacturer's recommendations. Carefully control pipe handling, after the gasket has been affixed, to avoid bumping the gasket knocking it out of position, or loading it with dirt or other foreign material. Remove gaskets so disturbed, and clean, re-lubricate, and replace before jointing is reattempted.
      4. Apply sufficient restraint to the line to ensure that the joints, once home, are held so by tamping fill material under and alongside the pipe. At the end of the day's work, block the last pipe in such a manner as may be required to prevent creep during down time.
5. Linear measure references to be measured from the center of the beginning structure to the center of the next inline structure and include the direction of flow.

3.05 INSTALLATION OF MANHOLES, CATCH BASINS, AND VAULTS

A. Furnish all necessary labor, materials, or equipment to pump, bail, or otherwise dewater the trench or pit for the duration of the construction and backfill period. Construction requirements shall be in accordance with WSDOT Standard Specifications Section 7-05.3 and the requirements shown below.

1. Manholes, Catch Basins, and Vaults
   a) Place manholes, catch basins, and vaults at the elevation and location indicated on the Drawings upon the appropriate bedding prepared in accordance with Section 31 00 00 - Earthwork.
   b) Carefully place precast manholes on the prepared bedding to be fully and uniformly supported in true alignment, and ensure that all entering pipes can be inserted on the proper grade.
   c) Thoroughly wet all lift holes and all joints between precast elements; completely fill with mortar, and smoothed and pointed both inside out, to ensure watertightness.
   d) Place and align precast sections to provide vertical sides and vertical alignment of the ladder rungs. The completed manhole shall be rigid, true to dimensions and watertight.
   e) In precast manhole sections where steel loops have been provided in lieu of lift holes, remove the loops flush with the inside wall surface after the manhole has been completed. No sharp cutoff protrusions will be permitted. If concrete spalling occurs as a result of the loop removal, restore the spalled area with mortar to a uniform smooth surface.
   f) Steps: Steps or Ladder Rungs shall be installed as described in Section 7-05.3 of the WSDOT Standard Specifications.
   g) Grade Adjustment: The manhole/catch basin casting frame or casting ring may be either cast into a concrete collar or set flange down on pre-cast concrete adjustment rings and mortared, as directed by the Engineer. It shall not, in any case, be grouted to final grade until the final elevation of the pavement in which it is to be placed has been established and permission has been given by the Engineer to grout the casting in place. Provide not less than eight inches or more than 16 inches between the top of the cone or slab and the underside of the manhole casting ring for adjustment of the casting ring to grade. Bricks for grade adjustment shall not be used. Location of catch basins will be staked by the Contractor.
   h) Pipe Connections: Place all unreinforced pipes entering or leaving the manhole on firmly compacted bedding, particularly within the area of the manhole excavation, which normally is deeper than that of the storm trench. Take special care to see that the openings through which pipes enter the structure are completely and firmly rammed full of mortar to ensure watertightness.
   i) Backfill: Hand-place backfill around the manhole and extending at least one pipe length into each trench and tamp with selected material up to an elevation of six inches above the crown of all entering pipes.
3.06 ADJUSTING EXISTING MANHOLES AND CATCH BASINS TO GRADE
   A. Adjust elevation of risers, frame and grate or cover of manhole risers, catch basin risers and other vaults to the elevation and location indicated on the plans. Work shall conform to WSDOT Standard Specifications Section 7-05.3(1).

3.07 ACCEPTANCE TESTING
   A. Cleaning and Testing shall be performed in accordance with WSDOT Standard Specifications Section 7-17.3 (2).
   B. After completion of the following, authorization from the Engineer shall be required before the Contractor can perform the cleaning and testing work:
      1. Acceptable placement of applicable pipe, bedding, and backfill material.
      2. Acceptable completion of all applicable manhole channels and grout work.
      3. Acceptable debris removal, cleaning, and flushing of all applicable pipes and structures.

END OF SECTION
PART 1 - GENERAL

1.01 SCOPE

A. The Contractor shall furnish and install the Jellyfish, complete and operable as shown and as specified herein, in accordance with the requirements of the plans and contract documents. The water quality treatment flow shall be as determined and approved by the Engineer of Record. The Jellyfish system removes pollutants from stormwater runoff through the unit operations of sedimentation, floatation, and membrane filtration.

B. RELATED SECTIONS

1. Section 03 40 00 – Precast Concrete
2. Section 33 40 00 – Stormwater Utility Systems
3. Section 33 49 14 – Concrete Structure Coatings

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM) Reference Specifications:

1. ASTM C891: Standard Specification for Installation of Underground Precast Concrete Utility Structures
2. ASTM C478: Standard Specification for Precast Reinforced Concrete Manhole Sections
6. ASTM D4101: Standard Specification for Copolymer steps construction

1.03 SUBMITTALS

A. Shop drawings for the structure and performance are to be submitted with each order to the contractor. Contractor shall forward shop drawing submittal to the consulting engineer for approval. Shop drawings are to detail the structure precast concrete and call out or note the fiberglass (FRP) internals/components.

1.04 PRODUCT SUBSTITUTIONS

A. Any proposed product substitution to this specification must be submitted for review and approved 10 days prior to project bid date by the Engineer of Record. Review package should include third party reviewed performance data for both flow rate and pollutant removal. Contractor to coordinate with the Engineer of Record any applicable modifications to the project estimates of cost, bonding amount determinations, plan check fees for changes to approved documents, and/or any other regulatory requirements resulting from the product substitution.
**PART 2 - PRODUCTS**

2.01 Precast Concrete Structure:
   A. Refer to Section 03 40 00 – Precast Concrete, Section 33 40 00 Stormwater Utility Systems, and Section 33 49 14 – Concrete Structure Coatings.

2.02 Gaskets:
   A. The device shall be watertight. Gaskets and/or sealants to provide water tight seal between concrete joints. Joints shall be sealed with preformed joint sealing compound conforming to ASTM C990.

2.03 Internal Components:
   A. The Jellyfish shall be of a type that has been installed and in use for a minimum of five (5) consecutive years preceding the date of installation of the system. The manufacturer shall have been, during the same consecutive five (5) year period, engaged in the engineering design and production of systems deployed for the treatment of storm water runoff and which have a history of successful production, acceptable to the Engineer of Record and/or the approving Jurisdiction. The manufacturer of the Jellyfish shall be, without exception:
      
      Contech Engineered Solutions 9025
      Centre Pointe Drive West Chester, OH,
      45069
      Tel: 1 800 338 1122
   B. Fiberglass: The fiberglass portion of the filter device shall be constructed in accordance with the following standard: ASTM D4097: Contact Molded Glass Fiber Reinforced Chemical Resistant Tanks.
   C. Cartridge Deck: The cylindrical concrete device shall include a fiberglass insert. The rectangular concrete device shall include a coated aluminum insert. In either instance, the insert shall be bolted and sealed watertight inside the precast concrete chamber. The insert shall serve as: (a) a horizontal divider between the lower treatment zone and the upper treated effluent zone; (b) a deck for attachment of filter cartridges such that the membrane filter elements of each cartridge extend into the lower treatment zone; (c) a platform for maintenance workers to service the filter cartridges (maximum manned weight = 450 pounds); (d) a conduit for conveyance of treated water to the effluent pipe.
   D. Membrane Filter Cartridges: Filter cartridges shall be comprised of reusable cylindrical membrane filter elements connected to a perforated head plate. The number of membrane filter elements per cartridge shall be a minimum of eleven 2.75-inch (70-mm) or greater diameter elements. The length of each filter element shall be as specified in the Plans. Each cartridge shall be fitted into the cartridge deck by insertion into a cartridge receptacle that is permanently mounted into the cartridge deck. Each cartridge shall be secured by a cartridge lid that is threaded onto the receptacle, or similar mechanism to secure the cartridge into the deck. The maximum treatment flow rate of a filter cartridge shall be controlled by an orifice in the cartridge lid, or on the individual cartridge itself, and based on a design flux rate (surface loading rate) determined by the maximum treatment flow rate per unit of filtration membrane surface area. The maximum design flux rate shall be 0.21 gpm/ft² (0.142 lps/m²).
   E. Each membrane filter cartridge shall allow for manual installation and removal. Each filter cartridge shall contain no less than 7 ft² of surface area per inch of length and have filtration membrane surface area and dry installation weight as follows:
F. Backwashing Cartridges: The filter device shall have a weir extending above the cartridge deck, or other mechanism, that encloses the high flow rate filter cartridges when placed in their respective cartridge receptacles within the cartridge deck. The weir, or other mechanism, shall collect a pool of filtered water during inflow events that backwashes the high flow rate cartridges when the inflow event subsides. All filter cartridges and membranes shall be reusable and allow for the use of filtration membrane rinsing procedures to restore flow capacity and sediment capacity; extending cartridge service life.

G. Maintenance Access to Captured Pollutants: The filter device shall contain an opening(s) that provides maintenance access for removal of accumulated floatable pollutants and sediment, removal of and replacement of filter cartridges, cleaning of the sump, and rinsing of the deck. Access shall have a minimum clear height over all of the filter cartridges (length of cartridge + 6 inches), or be accessible by a hatch or other mechanism that provides vertical clear space over all of the filter cartridges such that the cartridges can be lifted straight vertically out of the receptacles and deck for the entire length of the cartridge.

H. Baffle: The filter device shall provide a baffle that extends from the underside of the cartridge deck to a minimum length equal to the length of the membrane filter elements. The baffle shall serve to protect the membrane filter elements from contamination by floatables and coarse sediment. The baffle shall be flexible and continuous in cylindrical configurations, and shall be a straight concrete or aluminum wall in rectangular configurations.

I. Sump: The device shall include a minimum 24 inches (610 mm) of sump below the bottom of the cartridges for sediment accumulation, unless otherwise specified by the design engineer. Depths less than 24 inches may have an impact on the total performance and/or longevity between cartridge maintenance/replacement of the device.

J. Steps: Steps shall be constructed according to ASTM D4101 of copolymer polypropylene, and be driven into preformed or pre-drilled holes after the concrete has cured, installed to conform to applicable sections of state, provincial and municipal building codes, highway, municipal or local specifications for the construction of such devices.

K. Double-Wall Containment of Hydrocarbons: The cylindrical precast concrete device shall provide double-wall containment for hydrocarbon spill capture by a combined means of an inner wall of fiberglass, to a minimum depth of 12 inches (305 mm) below the cartridge deck, and the precast vessel wall.

2.04 Bend Structure:

A. The device shall be able to be used as a bend structure with minimum angles between inlet and outlet pipes of 90-degrees or less in the stormwater conveyance system.
2.05 Frame and Cover:
   A. Frame and covers must be manufactured from cast-iron or other composite material tested to support project design loads indicated on the drawings. Frames and covers must be embossed with the Contech or the Jellyfish brand name.

2.06 Doors and Hatches:
   A. If provided shall meet designated loading requirements or at a minimum for incidental vehicular traffic.

2.07 Performance:
   A. Function: The Jellyfish filter shall function to remove pollutants by the following unit treatment processes; sedimentation, floatation, and membrane filtration.
   B. Pollutants: The Jellyfish filter shall remove oil, debris, trash, coarse and fine particulates, particulate-bound pollutants, metals and nutrients from stormwater during runoff events.
   C. Bypass: The Jellyfish filter shall typically utilize an external bypass to divert excessive flows. Where an internal bypass is utilized, systems shall be equipped with a floatables baffle, and bypass water shall not pass through the treatment sump or cartridge filtration zone.
   D. Treatment Flux Rate (Surface Loading Rate): The Jellyfish filter shall treat 100% of the required water quality treatment flow based on a maximum design flux rate (surface loading rate) across the membrane filter cartridges not to exceed 0.21 gpm/ft² (0.142 lps/m²).
   E. Suspended Solids Removal: The Jellyfish filter shall have demonstrated a minimum median TSS removal efficiency of 85% and a minimum median SSC removal efficiency of 95%.
   F. Fine Particle Removal: The Jellyfish filter shall have demonstrated the ability to capture fine particles as indicated by a minimum median removal efficiency of 75% for the particle fraction less than 25 microns, an effluent d₅₀ of 15 microns or lower for all monitored storm events, and an effluent turbidity of 15 NTUs or lower.
   G. Nutrient (Total Phosphorus & Total Nitrogen) Removal: The Jellyfish filter shall have demonstrated a minimum median Total Phosphorus removal of 55%, and a minimum median Total Nitrogen removal of 50%.
   H. Metals (Total Zinc & Total Copper) Removal: The Jellyfish filter shall have demonstrated a minimum median Total Zinc removal of 50%, and a minimum median Total Copper removal of 75%.

PART 3 - EXECUTION

3.01 Handling and Storage: Prevent damage to materials during storage and handling.

3.02 Precast Concrete Structure: The installation of a watertight precast concrete device should conform to ASTM C891 and to any state highway, municipal or local specifications for the construction of manholes, whichever is more stringent. Selected sections of a general specification that are applicable are summarized below.
   A. The watertight precast concrete device is installed in sections in the following sequence:
      - aggregate base
      - base slab
      - treatment chamber and cartridge deck riser section(s)
• bypass section
• connect inlet and outlet pipes
• concrete riser section(s) and/or transition slab (if required)
• maintenance riser section(s) (if required)
• frame and access cover

B. The precast base should be placed level at the specified grade. The entire base should be in contact with the underlying compacted granular material. Subsequent sections, complete with joint seals, should be installed in accordance with the manufacturer’s recommendations.

C. Adjustment of the Jellyfish filter can be performed by lifting the upper sections free of the excavated area, re-leveling the base, and re-installing the sections. Damaged sections and gaskets should be repaired or replaced as necessary to restore original condition and watertight seals. Once the Jellyfish filter has been constructed, any/all lift holes must be plugged watertight with mortar or non-shrink grout.

3.03 Inlet and Outlet Pipes: Inlet and outlet pipes should be securely set into the device using approved pipe seals (flexible boot connections, where applicable) so that the structure is watertight, and such that any pipe intrusion into the device does not impact the device functionality.

3.04 Frame and Cover Installation: Adjustment units (e.g. grade rings) should be installed to set the frame and cover at the required elevation. The adjustment units should be laid in a full bed of mortar with successive units being joined using sealant recommended by the manufacturer. Frames for the cover should be set in a full bed of mortar at the elevation specified.

3.05 In some instances, the Maintenance Access Wall, if provided, shall require an extension attachment and sealing to the precast wall and cartridge deck at the job site, rather than at the precast facility. In this instance, installation of these components shall be performed according to instructions provided by the manufacturer.

3.06 Activation:
A. Filter cartridges shall be installed in the cartridge deck after the construction site is fully stabilized and in accordance with the manufacturer’s guidelines and recommendations. Contractor to contact manufacturer to schedule cartridge delivery and review procedures/requirements to be completed to the device prior to installation of the cartridges and activation of the system.

B. Filter cartridges shall be delivered and installed complete after site is stabilized and unit is ready to accept cartridges. Unit is ready to accept cartridges after it has been cleaned out and any standing water, debris, and other materials have been removed. Contractor shall take appropriate action to protect the filter cartridge receptacles and filter cartridges from damage during construction, and in accordance with manufacturer’s recommendations and guidance. For systems with cartridges installed prior to full site stabilization and prior to system activation, the contractor shall plug inlet and outlet pipes to prevent stormwater and other influent from entering the device. Plugs are to be removed during the activation process.
PART 1 - GENERAL

1.01 SUMMARY
A. Section Includes:
   1. Requirements for coating of concrete structures as identified on the drawings.
B. Related Sections:
   1. Section 03 40 00 – Precast Concrete
   2. Section 33 40 00 – Stormwater Utility Systems
   3. Section 33 44 23 – Inline Stormwater Treatment Facilities

1.02 REFERENCES
A. SSPC-SP 13/NACE 6: Surface Preparation of Concrete.

1.03 DEFINITIONS
A. Dry Film Thickness (DFT): Thickness of a coat of paint in fully cured state measured in mils (1/1000 inch).

1.04 SUBMITTALS
A. Comply with Section 01 33 00, Submittal Procedures.
B. Product Data: Submit manufacturer’s product data for each coating, including generic description, complete technical data, SDS, surface preparation, and application instructions.
C. Manufacturer’s certification that the applicator is qualified to apply the manufacturer’s coatings. Comply with 1.05, C below.
D. Manufacturer’s Quality Assurance: Submit manufacturer’s certification that coatings comply with specified requirements and are suitable for intended application.
E. Warranty: Submit manufacturer’s standard warranty.
F. Written reports describing inspections made and actions taken to correct nonconforming work.

1.05 QUALITY ASSURANCE
A. Provide products of a manufacturer who has been regularly engaged in the design and manufacture of the product.
B. Demonstrate to the satisfaction of the Engineer that the quality is equal to the product made by those manufacturers specifically named herein, if an alternate product manufacturer is proposed.
C. Applicator Qualifications:
   1. Manufacturer certification that Applicator has been trained and approved in the handling, mixing, and application of the products to be used.
   2. Certification that the equipment to be used for applying the products has been manufactured or approved by the epoxy coating manufacturer and that Applicator personnel have been trained and certified for proper use of the equipment.
   3. Five (5) recent references of Applicator indicating successful application of a high-build solvent-free epoxy coating by plural component spray application.
4. Proof of any required federal, state or local permits or licenses necessary for the project.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly identifying:
   1. Coating or material name.
   2. Manufacturer.
   3. Color name and number.
   4. Batch or lot number.
   5. Date of manufacture.
   6. Mixing and thinning instructions.
   7. Provide SDS with delivery.

B. Storage:
   1. Store materials in a clean dry area and within temperature range in accordance with manufacturer’s instructions.
   2. Keep containers sealed until ready for use.
   3. Do not use materials beyond manufacturer’s shelf life limits.

C. Handling: Protect materials during handling and application to prevent damage or contamination.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Weather:
   1. Air and Surface Temperatures: Prepare surfaces and apply and cure coatings within air and surface temperature range in accordance with manufacturer’s instructions.
   2. Surface Temperature: Minimum of 5 degrees F (3 degrees C) above dew point.
   3. Relative Humidity: Prepare surfaces and apply and cure coatings within relative humidity range in accordance with manufacturer’s instructions.
   4. Precipitation: Do not prepare surfaces or apply coatings in rain, snow, fog, or mist.
   5. Wind: Do not spray coatings if wind velocity is above manufacturer’s limit.

B. Ventilation: Provide ventilation during coating evaporation stage in confined or enclosed areas in accordance with AWWA D 102.

C. Dust and Contaminants:
   1. Schedule coating work to avoid excessive dust and airborne contaminants.
   2. Protect work areas from excessive dust and airborne contaminants during coating application and curing.
PART 2 - PRODUCTS

2.01 CONCRETE STRUCTURE COATING SYSTEMS

A. Exterior Coating: Provide a coating of coal tar epoxy applied at 16 mils to 20 mils DFT in one coat to the entire exterior surface of all concrete structures and at other locations shown on the drawings. Acceptable coatings are Tnemec 46H413, Koppers Bituplastic #33, or equal. If applied at the manufacturer’s site, repair any damage to coating created during MH installation in accordance with manufacturer’s instructions. Abrasive blast exterior to SP 13, fill all bung and surface holes with Tnemec Series 218 Mortarclad, or equal prior to applying coal tar coating.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which coating systems are to be applied. Notify Engineer of areas or conditions not acceptable. Do not begin surface preparation or application until unacceptable areas or conditions have been corrected.

3.02 COATING SYSTEM SELECTION

A. System: The Contractor shall select the complete Exterior Coating System from one of systems specified in 2.01, A herein. All components of the system selected shall be used as recommended by the manufacturer.

3.03 INSTALLATION AND APPLICATION

A. Tnemec 46H413

1. Prepare concrete surfaces in accordance with manufacturer’s instructions, SSPC-SP 13/NACE 6, and ICRI 03732.

2. Allow concrete to cure for a minimum of 7 days.

3. Test concrete for moisture in accordance with ASTM D 4263 and F 1869.

4. Level concrete protrusions and mortar spatter.

5. Ensure surfaces are clean, dry, and free of oil, grease, chalk, form release agents, and other contaminants.

6. Apply coatings in accordance with manufacturer’s instructions.

7. Mix and thin coatings, including multi-component materials, in accordance with manufacturer’s instructions.

8. Keep containers closed when not in use to avoid contamination.

9. Do not use mixed coatings beyond pot life limits.

10. Use application equipment, tools, pressure settings, and techniques in accordance with manufacturer’s instructions.

11. Uniformly apply coatings at spreading rate required to achieve specified DFT.

12. Apply coatings to be free of film characteristics or defects that would adversely affect performance or appearance of coating systems.

13. Stripe paint with brush critical locations on steel such as welds, corners, and edges using specified primer.
B. Koppers Bituplastic # 33
   1. Surfaces must be clean and dry. Employ adequate methods to remove dirt, dust, oil and all other contaminants that could interfere with adhesion of the coating.
   2. Concrete must be cured 28 days at 75° F (24° C) and 50% relative humidity or equivalent. Prepare surfaces in accordance with ASTM D4258 Surface Cleaning of Concrete and ASTM D4259 Abrading Concrete. Voids in concrete may require surfacing.
   3. Apply coatings in accordance with manufacturer’s instructions.

3.04 REPAIR
A. Damaged Coatings: Touch-up or repair damaged coatings. Touch-up of minor damage shall be acceptable where result is not visibly different from adjacent surfaces. Recoat entire surface where touch-up result is visibly different, either in sheen, texture, or color.
B. Coating Defects: Repair in accordance with manufacturer’s instructions coatings that exhibit film characteristics or defects that would adversely affect performance or appearance of coating systems.

3.05 FIELD QUALITY CONTROL
A. Inspector’s Services:
   1. Inspection shall be provided by manufacturer and Engineer.
   2. Verify coatings and other materials are as specified.
   3. Verify surface preparation and application are as specified.
   4. Verify DFT of each coat and total DFT of each coating system as specified using wet film and dry film gauges.
   5. Coating Defects: Check coatings for film characteristics or defects that would adversely affect performance or appearance of coating systems.
   6. Check for holidays on interior steel immersion surfaces using holiday detector.
   7. Report:
      a) Submit written reports describing inspections made and actions taken to correct nonconforming work.
      b) Report nonconforming work not corrected.
      c) Submit copies of report to Engineer and Contractor.
B. Manufacturer’s Field Services: Manufacturer’s representative shall provide technical assistance and guidance for surface preparation and application of coating systems.
